MICROFILMING PROJECT

PURPOSE

To microfilm Death Index Cards for Civil Defense purposes, that is, to store the micro-film in a secluded area free from "zone zero" and if disaster occurs to immediately set up a duplicate index card file using photographic paper as the card, the card image being made from the micro-film image.

The cards were filmed rather than the certificate because:

(1) Index cards are more adaptable to the automatic feed and all the essential data are shown thereon.

(2) Index cards would take approximately 1/3 the microfilm, the index card being 2¼" as against the certificate measuring 7¼".

(3) The issuance of certified copies can continue as usual.

PROCEDURAL DATA

It has been determined that on 100 feet of microfilm approximately 6500 2¼ x 3" index card images can be taken at a reduction of 23 to 1.

To average five microdex points (sections) for each 100 feet of microfilm there will be approximately 1600 2¼ x 3" death index cards between microdex points.
