# Inspect plumbing before you buy

Modern equipment and products may have done much to lighten the drudgery of the American housewife in caring for her home and family but they have placed a heavier burden on an important part of the house—the plumbing system.

**Kitchen waste disposal units and new automatic washing machines are among the new appliances which have sharply increased the load of home soil and waste plumbing systems, according to the Cast Iron Soil Pipe Institute.** The Institute, an organization of manufacturers of cast iron soil pipe dedicated to aiding the plumbing industry, notes that as a result of today's new appliances the average American family is estimated to dispose of 200 gallons of soil and waste each day of the year.

In addition to the increased quantity, the nature of soil and waste has changed

• • •

BESIDES the normally corrosive properties in the drainage plumbing, new active chemicals are used daily.

Strong flushing compounds, new improved washing detergents, cosmetics and other products, all results of the advanced American technology and standard of living, are now potential attackers of the home drainage system.

**Accordingly, the Institute suggests that prospective home buyers inspect the plumbing and drainage systems before purchasing a new house to determine the materials used and their resistance.**

Because of the metallurgical structure, cast iron does not corrode. In fact, cast iron pipe installed in Europe 300 and more years ago is still in good condition tyday.

The no-iron permanent press fabrics are in polyester-cotton blends as well as cotton-nylon cloths. Many self belts have brass buckles. Some makers offer ribbon sportswear belts in regimental colors and stripes.
