Right On, Ed Green

Ed Green knows a challenge when he sees one.

Take 1957.

Ed Green was a freshman at Westchester State College in Pennsylvania. He had never met a black Marine officer. In fact, he had never seen one. But he thought he was tough enough and smart enough to make it. A Marine recruiter told Ed Green about the Platoon Leaders Class. It meets only in the summer with pay, yet you are commissioned a Marine second lieutenant on graduation. You can even go on to flight school or law school if you qualify.

Ed Green joined.

Today he is Major E. L. Green, USMC, meeting every challenge that comes his way. He has taught at the Naval Academy. He has earned a masters degree in history at John Hopkins University. And now he is the new Special Assistant to the Commandant of the Marine Corps for Minority Affairs. His job is to make the Marine Corps a better place for blacks and whites to serve their country. And that means getting more black brothers into the Marine Corps as officers.

Ed Green pulls no punches.

"Until we achieve an adequate black officer distribution throughout the command," Ed says, "the system will not seem as fair as it should be."

Right On, Ed Green.

The Marines are looking for a few good men.

For information about how you can meet the challenge of becoming a Marine Officer, write to: Major Solomon Hill, Headquarters Marine Corps, Code DPG, Washington, D.C. 20380, or call your local Marine representative.

Penn State Offers Many New Careers

UNIVERSITY PARK, Pa. — Five of today's graduate students, who tomorrow may be professors in the 1,890 land-grant colleges, are enrolled in the College of Agriculture of The Pennsylvania State University.

The Penn State program was developed with support from the Rockefeller Foundation in anticipation of many new career opportunities arising from the strengthening of the 1,890 land grant colleges through additional federal and private support.

Students enrolled in the program envision an exceptional opportunity for service in teaching, research and extension in the 1,890 colleges and their predominant enrollment of Black Americans.

ACADEMIC WORK

All are presently graduates of 1,890 or other predominantly black colleges, and as they complete their academic work, others will take their place.

The Rockefeller Foundation has funded a portion of the program through 1974. It is expected that the University will continue it after that time through its own resources.

Students who apply for the program are expected to have a 2.5 average on a scale of 4. More emphasis is placed on grades during the third and fourth undergraduate years.

INTERIM PERIOD

Some enrollees find it desirable to strengthen their academic background before enrolling in regular graduate courses.

During this interim period, which may run from a 10-week term to a three-term academic year, students devote full-time to their studies.

The Rockefeller Foundation provides the student with $700 per term to cover living expenses, as well as allowance for tuition.

VITAL PART

On completion of this work, the student is enrolled as a regular graduate student in the college and is appointed to a departmental assistantship.

The assistantship pays the student $600-900 per term, plus tuition. In return, he is expected to contribute 20 hours per week to departmental teaching and research projects while carrying out his graduate studies.

The assistantship is considered a vital part of his education program by providing valuable experience in teaching and research.

Students may study for the master of science or doctor of philosophy degree in 19 separate biological and agricultural sciences, including genetics, rural sociology, food science, physiology, veterinary science, plant pathology, extension education, agricultural economics and animal nutrition.

Additional information on the program may be obtained from Dr. Jerome K. Pasto, associate dean, College of Agriculture, The Pennsylvania State University, 217 Agricultural Administration Building, University Park, Pa. 16802.

Black Pharmacists Are Urgently Needed

CAREER OPPORTUNITIES For

PHARMACISTS

HU Dean, Student Win Awards

WASHINGTON, D.C. — Dr. Joseph L. Henry, dean, Howard University College of Dentistry, and Douglas Ward, senior dental student, received distinguished achievement award plaques presented to them for "outstanding services and contributions to the growth of the Roxbury Medical-Technical Institute."

The awards were made at the Second Annual Medical Achievement Banquet in August 1972 in Boston, Mass.

The Institute, located in the Roxbury section of Boston, has several community programs with which the Howard College of Dentistry is affiliated.

Howard provides Roxbury both administrative and educational support. In addition, classroom, laboratory and other technical equipment have been given.

This past summer nearly 200 students from Roxbury visited Howard for a period of 14 days as guests of the College of Dentistry.

Drs. James T. Jackson and Sunder Vazarani led a team of faculty members and students of the College of Dentistry in providing an educational experience for the group.

DOUGLASS WARD, left, senior dental student, and Dr. Joseph L. Henry, dean, College of Dentistry, Howard University, both recently received distinguished achievement award plaques for "outstanding services" for their work with the Roxbury Medical-Technical Institute in Boston, Mass.
