No 8569. Equity.

and did you know Mrs Anna F. Dell during her life time?
Ans. Yes Sir. I did know Mrs Anna F. Dell
3. Int. In what capacity, and for how long did you know her?
Ans. As Physician for about 10 years.
4. Int. State the physical condition generally of Mrs Dell, during that time?—
Ans. She was a sufferer from chronic organic heart trouble which disease made her a semi invalid and at times she was confined to her bed, and required the attention of a nurse constantly day and night. the last three of her life her care was under the joint care of Dr. Wm M. Smith, my partner and myself
5. Int. Who gave her care and attention in her household
Ans. By her daughter, Mrs Annie Hedges Chiffy
6. Int. Will you state the character of service rendered by Mrs Hedges to her Mother?
Ans. as Nurse, Housekeeper, Cook, Chambermaid, and General household work.
7. Will you state about how long these services continued as observed by you and about what would you estimate these services rendered by Mrs Hedges, worth to her Mother?
Ans. These services were rendered more or less over the entire period of time I attended Mrs. Dell, her condition at times being much more critical than at others. At times she would be in Bed for a period longer than a month at a time at other time about a week at a time, and at all these times she was given constant care and attention by her daughter, and which in her severe sickness the care and attention given her by her daughter would sometimes be worth, in my judgement more than $2. per day and at other times less yet I would think that on the average the sum of $2- per day, to be a fair and reasonable charge for the services rendered.
8. Int. Did this care attention rendered her mother by Mrs Hedges have any marked effect on the health of Mrs. Hedges? The physical and mental strain that she endured nursing her mother on a number of occasions resulted in having to go to bed for a few days. she is not a strong woman and this nursing her mother on a number of occasions resulted in having her go to Bed, for a few days. she is not a strong woman, and this nursing was a great detriment to her health, and to-day she is very much improved
