TRUMBULL

Every Man's Car

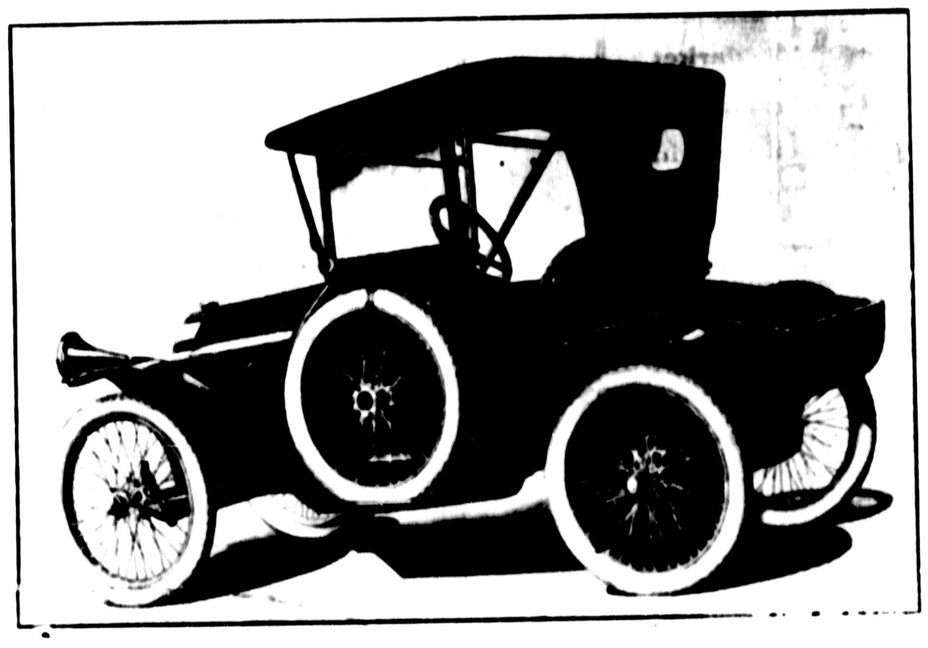
Costs less to operate than horse and buggy
35 miles to one gallon of gasoline
Speed 3 to 45 miles per hour
Can supply in any color
18 H. P. water-cooled motor
Electric Lights
Electric Horn
Top with side curtains
Wind Shield
Compartment in rear for 200 lb. luggage
High tension magneto
Interchangeable wire wheels
Four speeds forward and reverse

Shaft drive model with 3 speed selective type transmission and cone clutch will be ready for delivery October 15th.

Kennard & Kenton

Distributing Agents for Queen Annes County

Centreville, Maryland



$375.00

SUBSTITUTE FOR GASOLINE FOUND

COSTS 11-2 CENTS GALLON

New Product Known as "Aqualine" Was Discovered by a Portuguese. Has Been Tested out in Packard and Marmon Cars. Gives Better Satisfaction Than Gasoline, it is Said

Queen Annes county automobile owners will, no doubt, be delighted to learn that a substitute for gasoline can be manufactured for 11 cents a gallon and that it will run a motor car faster than gasoline. The product is now being made in Indianapolis.

F. E. Moskovics, commercial manager of the Nordyke & Marmon Company, of Indianapolis, has seen the substitute made and has observed tests of it. Some of the biggest men in the motor car business in this country are interested and predict that the new fuel will revolutionize not only the motor car business but all manufacturing business.

The new fuel is called "aqualine," Moskovics said. It was discovered by John Andrus, a Portuguese, of McKeesport, Pa., who was recently paid $5,000 by the government for a discovery he made in lightering armor plate. Andrus has discovered a way of breaking down water without the use of great heat and the new fuel is composed mostly of water, a little naphtha, oil and two secret ingredients that can be bought at any drug store. Andrus mixes these in a vat in which heat is applied and the result is a fuel that is equal in power to gasoline.

Andrus invented a carburetor previous to the Great Lakes Company and presidents of the Indianapolis Speedway Company in Indianapolis and Packard, of Warren, O., and McKeesport, Pa., received tests. Further tests are to be made in Indianapolis and that was some of the tests were made.
