¹ MD0021199 Blue Plains: To date, EPA Region III has resolved the loading issue for Nitrogen related to the Blue Plains discharge permit and the transfer of an equivalent of 6.0 mgd of TN loading to WSSC's Seneca plant in Maryland is reflected in the Blue Plains and Seneca latest issued permits. Furthermore, Nitrogen and Phosphorus loads equivalent to 6.0 mgd ENR effluent have been transferred to Seneca under an EPA approved NPDES permit for Seneca. However, because Blue Plains will retain the flow capacity of 169.6 mgd associated with the WSSC/MD flow allocation under the understanding that WSSC will offset any resulting loading if they use any of the 6 MGD of reserved flow capacity, this fact should be further noted by EPA Bay Program and WASA with regard to the design flow listed in the Blue Plains permit. As to Phosphorus, EPA's Chesapeake Bay Program will coordinate with EPA Region III/WASA/MDE to further clarify any remaining questions regarding the distribution of phosphorous load allocations between Blue Plains and Seneca WWTPs. Finally, MDE will work with EPA to clarify the 0.1 mgd flow issue at Blue Plains because this 0.1 mgd is from a federal facility.

² MD0021491 Seneca WWTP: see footnote #1

³ Nutrient or sediment information is not available for every NPDES permittee in Maryland's Chesapeake Bay watershed who was discharging under a permit at the time EPA established the Chesapeake Bay TMDL. To the extent that such discharges were occurring during the model calibration process, they were indirectly included in the results and therefore assumed to be included in the total load assigned in the TMDL. However, due to lack of specific information, the majority of these discharges have been assigned wasteload allocations in the watershed model input decks based on default assumptions regarding flow and concentrations, where available. These facilities should provide, at a minimum, nutrient and/or TSS monitoring data with their next NPDES permit renewal application. Renewed NPDES permits for these discharges may require monitoring to verify existing loads or to (1) verify that these loads do not contribute to any exceedance of the WLAs (determination of no reasonable potential to contribute to an exceedance of local WQS and/or Bay TMDL WLA). Appropriate permit requirements consistent with the local WQS and /or Bay TMDL WLA (where monitoring data shows reasonable potential to contribute to an exceedance of local WQS and/or Bay TMDL WLA) will also be imposed at that time. As a result, Maryland may include more specific information on these facilities in future Phases of its WIP that may be used to initiate modifications to the TMDL wasteload allocations.

⁴ MD0053431 Closed Facility: previously associated with GST Autoleather. Load may be allocated to Conococheague WWTP (MD0063509) upon permit renewal in accordance with Washington County water and sewer plan. In the interim, the allocation is listed in the minor industrial loadings as the previous industrial facility is no longer operating and no longer holds an NPDES permit.

Appendix G – NPDES Dischargers

⁵ MD_MININDRES: The statewide industrial reserve allocation is part of the insignificant industrial statewide aggregate allocation. Pending the outcome of additional reduction targets, this reserve allocation is potentially applicable only for existing discharges that did not previously receive an allocation representative of their discharge after appropriate reduction efforts, and/or for other new entities with a demonstrated commitment to green practices.

⁶ MD0001201 RG Steel: This does not include the additional applicable allocation for Back River 002 discharging via RG Steel outfalls. By 2015, RG Steel TN load allocation may decrease by as much as 82,000 lbs/year as the result of a pending revised 301(g) variance determination for ammonia.

⁷ MD0001775 Erachem: Effective September 2013

⁸ MDDRG3650 Masonville Dredge Material Containment Facility: As required in the discharge permit, Masonville DMCF TN and TP loads (net) are required to become zero by 2015.
