National Register of Historic Places  
Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act of 1966, as amended, I hereby certify that this  nomination  request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property  meets  does not meet the National Register criteria. I recommend that this property be considered significant  nationally  statewide  locally. ( See continuation sheet for additional comments).

Signature of certifying official/Title

Date

State or Federal agency and bureau

In my opinion, the property  meets  does not meet the National Register criteria. ( See continuation sheet for additional comments).

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- A Property is associated with events that have made a significant contribution to the broad pattern of our history.
B Property associated with the lives of persons significant in our past.
C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
D Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply)

Property is:

- A owned by a religious institution or used for religious purposes.
B removed from its original location.
C a birthplace or grave.
D a cemetery.
E a reconstructed building, object, or structure.
F a commemorative property.
G less than 50 years of age or achieved significance within the past 50 years.

Narrative Statement of Significance

(Explain the significance of the property on one or more continuation sheets)

Area of Significance

(Enter categories from instructions)

Paperwork Reduction Statement: This information is being collected for applications to the National Register of Historic Places to nominate properties for listing or determine eligibility for listing, to list properties, and to amend existing listings. Response to this request is required to obtain a benefit in accordance with the National Historic Preservation Act, as amended (16 U.S.C. 470 et. seq.).

Estimated Burden Statement: Public reporting burden for this form is estimated to average 18.1 hours per response including the time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding this burden estimate or any aspect of this form to the Chief, Administrative Services Division, National Park Service, P.O. Box 37127, Washington, DC 20013-7127; and the Office of Management and Budget, Paperwork Reductions Project (1024-0018), Washington, DC 20503.

## Description Summary:

Ruscombe is a two and a half story stone mansion with basement constructed in 1866 that is located on 1.35 acre lot in a residential neighborhood called Coldspring / Newtown in North Baltimore near the intersection of Greenspring Avenue and Springarden Drive. It is a gable and hip roof building measuring approximately 95' by 50' overall and encompasses roughly 9,185 square feet. A circular drive leads to the front entry with a small hipped roof garage constructed of stone off to the west of the house. The east, west, and north boundaries of the property are fenced off from a surrounding townhouse development. The house is structurally sound and in good condition with some missing or damaged windows.

### General Description:

#### Exterior

Ruscombe is a mansion of Italianate design built in 1866 of native fieldstone in a random rubble pattern with sandstone quoins and wooden trim work. The main body of the house is 50' x 50' and covered by a hipped roof with a gable roof L-shaped wing that extends north.

West Elevation: The west elevation where the present main entry is located is six bays wide with six over six wood double hung windows with stone lintels and sills on the first and second floors that are in fair to good condition. The entry door is wood surrounded by a transom and sidelights and covered by a small roof supported by wooden brackets. An Italianate-detailed cornice extends 18" from the face of the stone and extends around the entire house. An intersecting gable with an Italianate detailed rake spans three bays. Within the gable is a half-round arched window at the attic level. Also on the west elevation is one half-round top dormer on the hip roof and three round-top dormers are cut into the roof eave of the wing. At the north end of the wing on the west elevation is a 12' deep, 25' wide one and a half story stone wing with a gable roof and shed dormer. It has double hung windows with a half-round arched window at the attic level.

North Elevation: A porch with wood posts, railing, and balusters runs the full width of the north elevation. The gable end of the house on this elevation has two double hung windows at the second floor and two half-round arched windows at the attic level.

East Elevation: The east elevation has six over six wood double hung windows with stone lintels and sills on the first and second floors. The second floor windows are aligned over the spaces between the first floor windows. An intersecting gable similar in detailing to the one on the west spans two bays with a half-round arched window and wooden balcony supported by brackets at the third floor level. In a corner where the main house and wing connect is a concrete block exit stair built when the property was used as a school. To the right of the stair tower is a 6' wide original window that is behind a plywood infill and to the left is an original 6' wide door also behind a plywood infill.

South Elevation: The south elevation is two stories and three bays wide with a center projecting bay that has a wide wooden door which was the original entry. It is covered by a small roof supported by wooden brackets. Flanking the door are 5' wide original door openings with two rectangular transoms. Directly above the center door is a double hung window flanked by narrow double hung windows. The flanking second story bays contain pairs of double hung windows. A stone porch floor also spans the entire width of the elevation.

Section 7 Page 3

### Exterior Integrity

Ruscombe was originally a fully realized Italianate design (See Exhibits 1,2 & 3) but a fire in 1955 destroyed its hip roof which contained a south facing gable, a belevdere with balcony, and gable dormers. The roof was rebuilt as a simple hip roof without these elements. The gable on the east elevation and the original roof eave survived. A porch that wrapped around the south and east elevations is no longer extant. A garage was built in the early 20<sup>th</sup> century of matching stone and is linked to the house by a stone wall.

### Interior

First Floor: The entry on the west elevation leads to a hallway that intersects the original main hallway that is 10' wide. The interior walls of Ruscombe are built of 2' thick stone. The first floor rooms are still in their original locations with original door openings. Most of the original doors are no longer extant. Walls are covered in plaster which has been covered by gypsum board in most places. Most wood window and door moldings are original with some original wood double hung windows remaining. Replacement windows match original units. The ceiling height on the first floor is 10'. The original wooden floors have been covered with plywood and tile. A 12" deep plaster cornice with a cavetto molding runs the perimeter of most rooms. Throughout the first floor, suspended accoustic ceilings have been hung from the original plaster ceiling which has been covered with gypsum board. In the rooms along the south elevation, replacement French doors have been installed. A men's and women's bathroom has been installed in one of the original rooms. Some fireplaces remain with their original trim intact, others have been walled in. The main stair is in its original location but has been rebuilt with new treads and risers, railings and balusters.

Second Floor: The main stair leads to the original second floor hallway that is 10' wide. The second floor rooms are still in their original locations with original door openings. Most of the original doors are no longer extant. The original plaster walls have been covered with gypsum board and the floors are covered with tile. Most wood window and door moldings are original including some paneled window recesses, and some original wood double hung windows remain. Replacement windows match original units. There is a shallow plaster cove molding that runs the perimeter of the ceiling in the rooms. In four rooms on the second floor, original fireplaces with their original wood trim remain in place. Suspended accoustic ceiling have been installed in most rooms.

Attic / Third Floor: A wooden stair leads to the attic level that has unfinished spaces under the roof. The original attic was destroyed in a fire, but the stair to the original belevdere survived as did the half-round arched attic windows. A short flight of steps leads down to the rooms of the north wing which have 8' ceiling heights, plaster walls, and dormers.

### Summary Statement of Significance:

Ruscombe is architecturally significant under Criterion C because it embodies the distinctive characteristics of a type of construction – Mid - 19<sup>th</sup> Century Italian Villa. It is a rare surviving example of the kind of mansion built in the Civil War era by Baltimore's wealthy business class. The original owner, James Wood Tyson who along with his brother, Jesse, played a major role in creating the chrome industry in the United States. Although the roof was altered due to fire damage in 1955, the exterior of the house retains many important architectural features of the period including all its original window openings, half-round arched windows, its original entry, the doorways that opened on to its porch, and its original L-shaped wing off the main house. The fine artistry of the stonework of the exterior walls is an example of the expert craftsmanship of the period. The mansion's floor plan is intact showing the original location of the hallways, the main stair and all the rooms. The proportion, scale and the remaining fireplaces and detailing of the interior still conveys a sense of the grandeur of the lifestyle of the city's business elite. Ruscombe is also one of the very few known buildings designed by Joseph F. Kemp who is credited with the design of Camden Station adjacent to Oriole Park and the Baltimore Equitable Society.

### Resource History and Historic Context:

Beginning in the 1850s, many of Baltimore's business elite began to build large homes in the countryside far from the center of downtown. Men like Johns Hopkins opted to have a country residence in addition to a townhouse in the city that was located close to their place of business. The Tyson family belonged to this wealthy industrial and business class. Isaac Tyson, Jr. (1792-1861) was a Quaker businessman who created an industry that would hold a virtual monopoly of the world's chromium by the mid-19<sup>th</sup> century. He discovered the first chromium deposits in the Bare Hills section of Baltimore County in 1808. Beginning with a chromite mining operation there and in Soldiers Delight in 1827, Tyson then purchased all the major chromite sites in Maryland, Virginia and in Lancaster Pennsylvania to become the world's largest producer of chromium just as the original source in Siberia was being mined out.

Chromium, a chemical element discovered in 1797, is a hard brittle gray metal which is naturally found combined with iron and oxygen in a mineral called chromite. The element is extracted from the chromite and was used in combination with other elements to form colored compounds for paints in the 19<sup>th</sup> century. The word chromium comes from the Greek word chroma which means color. Tyson's Maryland chromite was the first used to manufacture chrome yellow, an important pigment used in painting. Chrome green was another popular color of the era. Chromium compounds were also extensively used for dyes for the textile industry and in tanning leather. Chromium had early refractory uses such as lining furnaces in the copper industry.

It was not until the end of the 19<sup>th</sup> century that the metallurgical uses that we today associate with chromium began. It was used to plate other metals, giving them a shiny hard protective finish such a car bumpers. In 1915, in Sheffield, England it was discovered that chromium can harden steel and that alloys containing more than ten percent produce stainless steel.

In 1845, Tyson established the Baltimore Chrome Works in Fells Point (now the former Allied Chemical site) to produce pigments, a process that had until then been done abroad. He became the biggest producer of chrome yellow in the world. In 1849, major chromite deposits were discovered in Turkey and eventually chromite from Asia Minor as well as California supplanted Tyson's supply. Tyson had also developed iron ore and copper mining operations in South Strafford Vermont. Tyson brought two of his sons, Jesse and James, into the business. After graduating from Haverford College in Pennsylvania, James concentrated on the mining side of the enterprise producing copper ore in the Bare Hills, Sykesville, Maryland and Vermont as well as chromite mining in Soldiers Delight. After the death of his father, he took over the mining operations of chromite, iron ore and copper and his brother, Jesse, oversaw the manufacturing at the Chrome Works. The Tysons were an important Quaker family in Baltimore who were avid

Section 8 Page 3

abolitionists before and during the Civil War. In 1864, James Tyson wrote to Abraham Lincoln, asking him to receive a bible from "a committee of colored men of Baltimore.... as evidence of their regard and gratitude."

In the early 1860s, James and Jesse purchased tracts of land in the Melvale section of Baltimore County on which they would build homes. Jesse's mansion would be called Cylburn which is now on the National Register, and James built Ruscombe on his 110 acre tract that abutted his brother's land. The estates were named at the same time, Cylburn meaning "cool vale" and Ruscombe meaning "brown hill." The 20 room mansion was designed in 1865-1866 by Joseph Kemp, an architect of which relatively little is known. He had been a draftsman for the Baltimore & Ohio Railroad who came to prominence when he designed Camden Station which became the railroad's main downtown passenger and freight facility. A design had been done John R. Niernsee for the site in 1853, but the railroad did not move on the project until 1856, the year Niernsee dissolved his practice and left Baltimore to take up the commission of the South Carolina Statehouse. Kemp took over the project and redesigned it. When construction began in 1856, the *Baltimore Sun* credited Kemp with the design. An illustration of the building in *City Rambles* by John C. Gobright in 1857 credits J.F. Kemp as architect. Kemp is credited with other buildings in Baltimore: the Eutaw Savings Bank of 1857 (known as the Baltimore Equitable Society Building after 1889), a brownstone Italian Renaissance Revival building and the Graham House on 704 Cathedral Street. He also supervised the construction of the Peabody Institute. In a letter of May 1, 1866 to his brother who is traveling on business, Jesse Tyson reports among other things the progress on the construction of James' new house. In the letter he mentions Joseph Kemp as architect and the question of where a porte cochere is to go on the west elevation.

The design was a full blown Italianate villa, (See Exhibit 1) a style that had a great popularity in America from the 1850s into the late 1870s mainly due to the work of Alexander Jackson Davis which was illustrated in the books of Andrew Jackson Downing. A two-story main block, fifty feet square with a hip roof, it had a belevdere surrounded by a balcony. A porch ran along the south and east elevations that had wide doors opening out on to it. The upper stories had the characteristic half-round windows of the style with small balconies at the third floor level. The house is unusual in that most Italianate villas were of frame construction or stuccoed brick scored to mimic stone. Ruscombe was constructed of native stone.

Tyson raised his family here until 1879 when he moved to Vermont. He kept the house and gave 24 acres of the property to his children. In 1887, he sold 37 acres and the house to Francis J. LeMoyné, a retired attorney from Chicago, retaining the rest of the property. Tyson died in 1900. LeMoyné died in 1918 at Ruscombe and the house passed to a relative, Blanchard Randall who died in 1936 but the property and house remained in his estate until 1948 when it was sold to

Bais Yakov School for Girls, an Orthodox Jewish school. In 1955, a four alarm fire destroyed the roof and part of the mansion. Despite efforts by the city to condemn Ruscombe to make way for a public school, the building was repaired in 1956, and a new building was constructed on the property. It was used until 1971 when the school moved and sold the property to Baltimore City who then leased it to the Waldorf School. All the land was sold except for 1.35 acres by the city for the Cold Spring Development known as Woodlands. The Waldorf School moved from the building in 1997 and it has remained vacant since then.

## Verbal Boundary Description:

The boundaries of this historic resource are identified in Baltimore City Land Records as Map 27, Section 69, Block 4756B, Lot 109. The legal boundaries of the resource are shown in an accompanying drawing titled Site Plan drawn to a scale of 1" = 40' taken from a Baltimore City Planometric Map.

## Boundary Justification:

The boundary starts from a point located approximately 102' east from Greenspring Ave, then 320' east along Springarden Drive, 55' north, 105' northwest, 30' north, 70' northwest, 198' west, 55' southwest, 160' south to the starting point.
