

W. R. NUTTLE

KENT

KEY TO THE FILING SYSTEM

1. Each file folder has a name. It may or may not mean much since it could represent the owner of the property, the buyer, the lawyer or the realtor. In addition, the property could conceivably have changed hands several times since the survey was made.
2. Each folder has a designation indicating the general location and the order when the survey was done. The first letter or letters represent the county (K for Kent, QA for Queen Annes, CA for Caroline, and CE for Cecil). The next number is the election district, and the last number is the order in which it was done.
3. Some subdivisions files were established in the beginning. They are numbered in the order in which they were done. In some of the larger subdivisions the plats of the individual lots are in a single folder.
4. Some of the smaller subdivisions were not put into the subdivision files until after sufficient surveys were done in that area. These will have both conventional file designations, such as K-2-45, and also a simple subdivision number.
5. The plats in the plat files are simply grouped into county and election districts.
6. Some of the folders contain surveys involving the same property over a period of 40 years.
7. Both Kent and Queen Annes surveys are shown on the copies of the tax maps. Only the last number is shown; the election district can be determined by the map.
