DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE	
<p>Old City Hall and Engine House is inconspicuously located among the commercial buildings of Main Street. The narrow brick building is two stories in height and is covered by a hipped roof with a simple molded cornice around the base of the roof. The ridge of the roof was originally crowned with a belfry containing louvred arched opening, a concave pyramidal roof, and ornamental finial. In 1875 a sketchbook of Maryland artist, Frank B. Mayer, contains a detailed drawing of the now removed cupola which is also depicted in a 19th. century photograph. First shingled with wood, the roof now has sheet metal covering.</p> <p>The first floor of the north, or street, facade originally had large openings to provide fire engine entrances. These openings were filled in with a shop front soon after the building was sold by the City. The present commercial window arrangement replaces at least one earlier one and is topped with a cornice molding supported on scrolled brackets. To the left of the shop front is a door which opens onto a straight flight of stairs leading to the second floor.</p> <p>The second floor facade is common bond brick and has three windows, each with six-over-six sash. The fact that these windows are smaller and have what appear to be later frames than the obviously original windows on the building's west side suggests that the second floor front may have been remodelled also. The west side windows contain nine-over-nine sash; those on the building's east side have been blocked up.</p> <p>The building's first floor interior contains two large rooms and is completely covered with modern work; thus, the extent of original woodwork is unknown. The second floor originally contained a large meeting room, but has since been partitioned into several offices. Some original trim remains, however, including portions of the plaster cornice and simple fluted chair rail. Also remaining is a section of stair railing and several original window frames. An extension on the south side has given an extra room to both the first and second floor. As, with the exception of the belfry, the original structure is largely intact, it is hoped that the building will be restored.</p>

STATEMENT OF SIGNIFICANCE

SEE INSTRUCTIONS

Number 211 Main Street was built in 1821-1822 to serve the dual function of a City Hall and fire engine house and was the first structure built by the City of Annapolis for municipal use. As originally designed, the ground floor of the building housed the fire engines, and the second floor contained a meeting room for the citizens and City Council. The erection of the building provided a much-needed boost for local fire-fighting efforts. When construction was finished, a number of wells with pumps were sunk throughout the city to provide a water source for fires. One well and pump was located directly outside the City Hall and Engine House. Just prior to completion of the building, the fire company was reorganized to include three directors and three captains. A captain was placed in charge of each of the town's three fire engines. (One of these fire engines still exists and is owned by Historic Annapolis, Inc.) To insure proper maintenance of all equipment the position of Keeper of the Engines and Horses was established, and was first held by Elijah Wells.

The building served its intended functions until 1868 when the town government moved its offices to Duke of Gloucester Street. The old building was auctioned and was converted by its purchasers into a commercial establishment. The building somewhat altered from its original form and without its belfry, is used for commercial purposes today. Despite the changes in appearance, the simple Federal-style structure remains a significant local landmark, intimately associated with the early nineteenth century history of the City. It also survives as a rare example of an early fire house.

CAPSULE SUMMARY
City Hall and Engine House
211 Main Street
(AA-581)

The City Hall and Engine House, built 1821-1822 by the City of Annapolis, was the first structure erected by the city for municipal purposes. Relatively intact today, the building contributes to the Annapolis Historic District for its architecture and important role as the first purpose-built home of the city government.

Designed to serve as a fire station on the first floor with a meeting room for the town council above, it was used until 1868 when the city relocated its functions to Duke of Gloucester Street. After sale at auction to William Inglehart in 1868, the building was converted to commercial use and was altered over time. Major exterior alterations include the addition of a new pressed brick facade, the removal of the original cupola, the addition of Italianate style details, and changes to the fenestration. The interior no longer retains historic fabric.

Presented in a vernacular rendition of the Federal style, the 2-1/2-story, three-bay brick building is set upon a brick foundation and is covered with a half-hipped and half-gable roof. One entry, leading to the second floor and indicated by a pair of brackets, is set to the side; a second, more recent, glass entry door is set next to a two-light plate glass store window. A projecting wood cornice with brackets delineates the two stories. Since 1868, the first floor has been used for retail; currently the second floor is vacant.

=====

Applicable National Register Criteria (Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations (Mark "X" in all the boxes that apply.)

- A owned by a religious institution or used for religious purposes.
- B removed from its original location.
- C a birthplace or a grave.
- D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.
- G less than 50 years of age or achieved significance within the past 50 years.

=====
Originally built in 1821-1822 to serve a dual function as the City Hall and Firehouse, the building at 211 Main Street is located on the southwest side of Main Street between Conduit Street and Church Circle. Designed in a vernacular Federal style, the 2-1/2-story, three-bay brick building is set upon a brick foundation and is covered with a half-hipped and half-gable roof.¹ The roof currently features a chimney at the rear of the building, built on center and flush with the rear elevational wall. A cupola with louvered arches which originally crowned the ridgeline of the roof has since been removed.² Although the building retains its original massing, it has been significantly altered on the first story by the introduction of an Italianate storefront and more recently modernized by plateglass show windows. A single-story rear ell constructed of concrete block was added to the rear of the building between 1930 and 1954. The interior no longer retains original materials or details.

The front elevation of old City Hall consists of a first story storefront and a side-passage entry and three bays of windows on the second story. The first story originally had large openings to provide for fire engine entrances; after 1868 when the City sold the building for commercial purposes, a new facade of all-stretcher brick appears to have been added to the three-course brick walls on the second story,³ and a wooden Italianate storefront and side-passage entry were appended to the first story of the front elevation of the brick building. In the second half of the 20th century, a new entry door and showwindows to the first story commercial space replaced the post-1868 storefront.

¹ The hipped section of the roof faces the front Main Street elevation. The center ridgeline continues towards the rear to form a simple gable. It is currently clad with standing seam metal, but originally had wood shingles.

² Based upon a ca. 1890 photograph of the building which shows the cupola, it follows that the cupola survived at least until the end of the 19th century before being removed.

³ The all-stretcher facade is toothed into the brick walls laid in three-course bond. It appears that this facade was added; it follows that this would have occurred during the alteration, after 1868, of the building from its use as a firehouse to a store. However, the ca. 1897 historic photograph of the building shows alterations in the brickwork between the second and third floor where the top of the large fire engine doors would have been. It seems, therefore that the new facade was added after the Italianate alterations; perhaps during the mid-20th century changes to the building.

Section 7 Page 2

211 Main Street

=====

The side-passage entry is located in the southeast end bay of the building and features a six-panelled wood replacement door surmounted by a two-light transom. As shown on the historic photograph, the original side-passage door was a four-panelled wood door with a transom; the transom lights are not visible on the historic photograph. Next to the side-passage entry is a wood and glass door with a three-light transom leading into the store. A pair of large plateglass windows fit flush into the wall surface and fill the remaining half of the front elevation. The original, post-1868 storefront, consisted of a central, recessed entry with double wood doors flanked by square projecting show windows set upon wood panels. The fixed show windows were divided into four.

Above the doors and show windows is the post-1868 projecting cornice still intact. It is supported by heavy, scrolled wood brackets and extends across the front elevation. A set of three smaller modillions are located between the end brackets above the side-passage door; similar modillions may have one time been found above the storefront, but are no longer intact.

The second story wall, with its all-stretcher bond brick front toothed into the three-course brick walls, features three bays of 6/6 windows. These 6/6 windows, visible on the ca. 1897 historic photograph, may have replaced 9/9 windows which appear elsewhere on the building. The windows are set within the original openings and have the original wood sills and original jack-arched lintels. They are adorned with louvered shutters. A hipped roof, clad with metal (originally wood shingles) rises above a molded wood cornice.

The northwest elevation reveals the original three-course brick walls and features a single 9/9 window opening on the second story. A narrow, one-bay passage recessed from Main Street and connecting 211 and 213-215 Main Street was constructed against the first story of this side elevation prior to 1885. After 1954, the passage was extended towards the front, or totally rebuilt, so that it is flush with the facade of 213-215 Main Street and considered part of that building.

The southwest elevation is visible in part from the rear yard of the house located at 210 Duke of Gloucester Street. A single-story rear wing constructed of concrete block extends from the rear of the original building and obscures the original wall surface and fenestration. The second story, however, features original 9/9 windows on either side of the central chimney, built flush with and

=====

as an integral part of the brick wall. The windows have wood sills and jack-arched lintels. In the attic level, also flanking the chimney, are two square window openings, one with a fixed sash, the other with a 4-light window painted over.

The rear ell is a concrete block structure clad with a stucco finish. The southwest rear elevation of this wing has a pair of 6/1 windows and a wood and glass door, all currently boarded up. The northwest side elevation of the wing has small windows, all boarded up, at the top of the wall.

The interior of 211 Main Street consists of two rooms on the first floor: the front room which corresponds with the original and main block of the building and the rear room which corresponds with the addition. The rear wall of the original building (including the central chimney) has been removed and opened to lead directly into the addition. No original materials survive intact in the first floor store due to renovations in 1979. The second floor and attic level were not surveyed. However, according to a 1968 HABS survey form, the second floor consisted of the original large meeting room with modern partitions dividing it. Some of the original trim, including portions of plaster cornice and fluted chair rail were intact at that time.

=====
The building at 211 Main Street was constructed in 1821-1822 by the City of Annapolis to serve as a dual purpose firehouse and city hall. The building housed the fire station on the first floor and meeting rooms for the town council on the second floor. It was the first structure built by the city for municipal purposes and it continued to serve its originally intended purpose until the city government moved to Duke of Gloucester Street in 1868. At that time, the building was auctioned and shortly thereafter converted to commercial space. The building survives relatively intact today and is an important physical reminder of the local governmental history of Annapolis.

The land on which the old City Hall and Firehouse stands was originally part of a larger parcel of land. In 1718, Philemon Lloyd, the owner of the land, had the property surveyed and platted as Lot 48 on the Stoddert Map of 1718. Colonel Philemon Lloyd, born in 1646, was the son of Colonel Edward and Alice (Crouch) Lloyd.⁴ Following the death of Lloyd in circa 1732-1738, Daniel Dulany inherited lots 48, 49, and 50. Daniel Dulany was the second husband of Henrietta Maria Lloyd Chew, the daughter of Philemon Lloyd. In 1748, Dulany sold the three lots with houses to his daughter Henrietta Maria Dulany and her husband, Edward Dorsey.⁵ Dorsey subdivided lot 48 in 1757, leasing one part to Thomas Hyde and another part to Charles Wallace for 99 years. Hyde's leasehold was described as "beginning above Nicholas Maccubbin's storehouse" on lot 47. Wallace's portion, which makes no mention of improvements, is described as "being above that of Hyde."⁶ Based upon these references, it is not entirely clear where the delineation of the lot was in terms of current addresses.

In any case, in 1772, a Provincial Court case divided the property of Henrietta Maria Dulany between her daughters, Mary Chew Paca and Margaret Chew Bordley. William and Mary Paca received all of lot 48.⁷ William Paca, signer of the Declaration of Independence and third governor of Maryland, was born October 31, 1740 at "Wye

Hall," Harford County, Maryland.⁸

In 1773, Charles Wallace purchased a portion of Lot 48 from William and Mary Paca. This portion, described as being 22 feet on Church Street above Wallace's present land (this would correspond with the site of the Coffee House, whose exact boundaries have not been determined, but include at least 197 Main Street), may have included the parcel of land on which the City Hall and Firehouse was erected.⁹

By 1821, the City of Annapolis owned the site and in 1821-1822, built the existing structure as a City Hall and Firehouse.¹⁰ The first floor of the building was to serve as the engine house; the second floor for meeting rooms for the town council. Prior to the completion of the building in 1822, the fire company was reorganized to include three directors and three captains. A captain was in charge of each of the town's three engines; one of the engines remains and is owned by Historic Annapolis Foundation.

The building continued to operate as a firehouse and municipal offices until 1868 when the city moved to Duke of Gloucester Street and auctioned the building. William T. Inglehart purchased the building at auction for \$2515.00. The building remained in Inglehart family hands until 1912.

During the Inglehart ownership, the building was altered for commercial purposes; an Italianate storefront replaced the large fire engine door openings. According to the Sanborn Maps, the building is shown from 1885 until 1891 as a drugstore; in 1897, the building is listed as a carpet, etc. store. An historic photograph of the building currently in possession of the store manager and

⁸ Warfield, p. 235-237.

⁹ The early history of Lot 48 is complex; the existing lot histories compiled by the N.E.H. study are filled with discrepancies and do not clearly identify what current properties the 18th century parcels included. Further research may help to clarify these issues.

located in the store, shows the building as a drugstore.¹¹ The photograph shows the cupola and the Italianate storefront which was added to the building following its 1868 sale, as well as the cupola.

By 1903, the building is no longer listed as a carpet store, but is shown as a storage facility on the 1903 through the 1913 Sanborn Maps. In 1912, Inglehart family members sold the property to George Feldmyer. By 1921, the building was converted into a grocery store. Following George Feldmyer's death, John Roger Fredland purchased the property in 1960. In 1967, the property was bought by Robert and Ann Scott, who sold it four years later to Mary C. Turpin. The following year, Mary C. Turpin sold the property to Sydeny and Betty N. Horwitz. The building is currently a variety store selling English goods.

¹¹ The photograph is located in the back storeroom of the building. It has no date, but based upon the findings would appear to date from before 1897, when the drugstore became a carpet store.

4. NOTABLE FEATURES, HISTORICAL SIGNIFICANCE AND DESCRIPTION <p>A very fine Federal building 211 Main has been altered on the ground floor, but remains superb example of period above. A pyramidal, hipped roof, simple wood cornice and beautiful elongated 6/6 windows (3 of them) with louvred shutters - typical Federal feature. 1st floor has been altered but good Victorian bracketed cornice separates Federal from Victorian. "Original" Federal front could be easily restored. Either way building must be preserved - it and 215 are <u>important</u> part of Annapolis. Historically important as 211 was old City Hall.</p>		OPEN TO PUBLIC yes
