Rogers Hospital

Public

Rosewood Hospital Center

Owings Mills

Rogers Hospital is a two-and-one-half-story, hipped-roof stone building with a mid-twentieth century brick addition. There are impressive Georgian Revival entrances on the north and west facades. Designed by Henry Powell Hopkins and completed in 1939, Rogers Hospital replaced the smaller Wyman Infirmary.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The Rogers Building, built in 1939 is a two-and-one-half story hipped roof structure constructed of multi-colored, irregularly cut stone laid in random courses. Smoother grey stone is used for the quoins at each corner, the string-courses, water-table and as jack arches above the windows.

The main block is nine bays wide and ten deep with four bay wide projecting pavillions at the north and south ends. The building has a steeply pitched hipped roof with a cornice consisting of a row of dentils below a row of modillions. There are two octagonal cupolas with louvered sides and flared pyramidal roofs.

There are seven pedimented dormers with 15/15 sash on the east and west facades, one each on the pavillions and five along the north and south facades. The other windows on the first and second stories have 20/20 sashes. The windows on the east and west facades of the pavillion are arranged in a group of four, separated by plain Doric pilasters. The window arrangement on the south facade consists of paired windows flanking two triple windows.

There is a large Georgian style entrance on the west facade consisting of a double door with twelve paned sidelights and topped by a twelve paned transom; this is flanked by pilasters of smooth-stone pyramidal faced blocks with Doric capitals and bases. There is a plain frieze, modillioned cornice and an elaborate broken swans neck pediment with an engaged urn in the center. The stone trim around the door consists of a band of alternating rosettes and reeded stone blocks.

The entrance on the north facade consists of a single door with a ten paned transom flanked by fluted stone Doric columns with three rosettes in the capitals and a modillioned swans neck pediment with center urn.

There is a large mid-century brick addition attached to the east facade of the Rogers building.
