DESCRIBE THE PRESENT AND ORIGINAL (If known) PHYSICAL APPEARANCE

Maxwell Hall is situated on a bluff overlooking the confluence of the Patuxent River and Swanson's Creek, one-half mile east on a private lane from Teagues Point Road, approximately two miles east of the junction of Teagues Point Road and Maryland Route 231, one mile southeast of Patuxent City in Charles County, Maryland.

Maxwell Hall is a one and one-half story, gambrel roofed frame house that is distinguished from other similar houses in the Southern Maryland region by its massive external chimneys. Although the exterior weatherboarding and most of the cornice and trim was replaced about 1925, the house remains today much the same in appearance as it did when built.

The principal facade faces east and is five bays in length. The entrance door occupies the central bay and is flanked by double-hung windows of nine over nine sash. On the lower slope of the roof are three pedimented dormer windows of six over six sash. All of the windows and doors, including the dormers, occupy original locations and retain their original dimensions, although most of the trim and sash (particularly on the dormers) has been replaced. The west facade is three bays in length with a transomed center door; above are two dormer windows of the same design as those of the east facade. At both the front and rear elevations are small, crudely built, shed roofed porches; beneath the roof of the west porch is preserved a small section of the original modillioned eave cornice of the house. At each end of Maxwell Hall stand massive single chimneys, both similar in plan but with several differences. The north chimney measures eighteen feet in width at the base and rises in two graduated sections that are defined by tapered weatherings; the great expanse of the lower weatherings are tiled by flat brick laid in a herringbone pattern; the smaller, irregularly positioned weatherings above are tiled with flat brick laid end to end. An unusual feature of this chimney was a small window (now bricked in) at the attic gable level that once provided light to a small chimney closet. The south end chimney was built on a fieldstone foundation that is completely exposed for one full story at this elevation. Although this chimney is of the same size and plan as the north chimney the whole of the area between the foundation and the top of the lower weatherings is constructed of unusually small tiling brick, while above the top of the weatherings it is of a larger, more normal sized brick. The free standing stacks of both chimneys stand twenty inches away from the ends of the house; the south chimney is somewhat larger than the north chimney as it contains one additional flue.

#7 Description (Continued)

Maxwell Hall was built on irregularly coursed fieldstone foundation walls that enclose a full cellar. At both the front and rear facades are small wood barred cellar windows. At the exposed south end of the cellar is the only exterior entrance to the cellar: a batten door with a large wrought hasp.

The floor plan of Maxwell Hall is one typical of the region throughout the eighteenth century and early nineteenth century, although it apparently was more frequently used in the mid-eighteenth century. The first floor plan consists of four rooms and a short rear stair hall. The interiors of all of these rooms were renovated about 1835 and all of the existing door and window trim, doors and mantles, are in the Greek Revival style. When these renovations were made several of the closets that were built into the chimneys were covered over and formerly expansive fireplace openings were altered in size. The present stair, rising along the south wall of the hall, is also a later introduction and may be contemporary in date to the other alterations; the location of a previous stair has not yet been ascertained but it is believed to have occupied this same general location and was probably smaller in size. A former stair to the cellar beneath the present stair was removed and the opening covered over, possibly early in this century.

At the second floor level is a central hall with two doors on each side wall that open into four small bed chambers. All of the wall plaster and trim at this level was replaced early in this century; however, the basic room configuration is believed to be original.

One unique feature recorded at Maxwell Hall was the evidence of an original use of riven clapboards to sheath an interior partition wall. These clapboards, perfectly preserved under later layers of sawn lath and plaster, extend across the whole of the south wall of the hall. It is not known whether the clapboards extend (or extended) into any of the other rooms up above the first floor ceiling line but their existence alone is rare in houses of this otherwise relatively sophisticated plan. In Maryland, interior wall treatments such as this are more frequently found in more simpler houses and farm dependencies of the seventeenth, eighteenth, and occasionally the nineteenth century.

#7 Description (Continued)

In the cellar are two large rooms divided by a fieldstone partition wall. The floor is of packed dirt with the exposed ceiling timbers and walls whitewashed. An interesting construction feature seen in the cellar are two massive summer beams that support three sets of common joists. At each end of the house, positioned in from the end walls, are large tie beams into which the summers are secured. At the south end of the south cellar room is a tall and rather narrow opening, now filled in with stone and brick rubble, that may have been a former fireplace or a supporting niche for the chimney.

A short distance from the base of the west porch stair is a large flat gravestone, moved here in recent years from a graveyard on the property. The inscription has been completely obliterated and the stone is now used to cover a well opening.

#8 Significance (Continued)

riven clapboards. Other information is obtainable behind the later Greek Revival work to fairly accurately establish the original appearance of the interior.

STATEMENT OF SIGNIFICANCE

Unfortunately, little is known about the history of Maxwell Hall except that the property had been in the possession of the Bowling family for almost one hundred and fifty years before its acquisition by Mr. Goldstein in 1971. The property now includes about one thousand acres; it has been horribly defaced by excessive timbering and its future is, to say the least, uncertain.

Despite the alterations to the structure itself and the uncertainties regarding its future, Maxwell Hall deserves recognition as being one of the best surviving examples of its type of architecture in the lower Southern Maryland region. The continued survival of this house will provide a valuable source for the study of mid-eighteenth century vernacular architecture in this region.

As a result of intensive recording of various types of vernacular architecture in Southern Maryland representing the development of our architecture from the mid-seventeenth century to the early nineteenth centuries, we have been able to assign certain characteristics to different "periods" and locations. In Charles and St. Mary's county there are a total of five surviving examples of houses similar to Maxwell Hall. All of these, excepting Maxwell Hall, have been extensively altered by later interior changes and structural additions. (One, the finest and least altered of these recorded examples, burned in 1971). All possessed the same four room and short rear hall so popular in this region in the mid-eighteenth century. All have gambrel roofs and at least one single massive chimney of the same type as is seen at Maxwell Hall. Other features that separates this structure from the others is the massive support system of combined summer and tie beams, the unusual tiling of the chimney weatherings, the miniature bricks used in the construction of the south chimney base, and the great number of fireplaces and chimney closets that were built into each chimney. Of interest on the interior are the unusually large original fireplace openings and of course, the wall sheathing of

DESCRIBE THE PRESENT AND ORIGINAL (If known) PHYSICAL APPEARANCE

Mainwell Hall is a charming one and one half storey gambrel roofed frame dwelling that has a probable mid eighteenth century ~~date~~ construction date.

On the approach side (S. elevation, rear) the dwelling is three bays in length. The centered door is of two vertical flanking panels. To each side of the door is a single window possessing a 9 pane sash. Directly above are two peaked dormers spaced slightly toward center line. Each has windows of 6/6 pane sash. Beneath the small shed roofed porch at this elevation the only remaining portion of an early modillion cornice is preserved. At the foot of the steps leading to the porch landing is a large flat gravestone of uncertain age since the inscription has been completely obliterated.

The N. elevation, facade, is five bays in length. The centered door has panels matching the rear door. Both pair of flanking windows retain their 9/9 pane sash. At roof level are three irregularly spaced peaked dormer windows with 6/6 sash.

At both the E. and W. elevations are single exterior chimneys of massive size. Both are almost exactly alike in design and each measures 18' 3" at the base. Both stacks are exceedingly wide but well balanced visually and stand approx. two feet away from the gables. One interesting feature is visible at the W. stack and that is a small bricked in closer window at the gable level. There is a variation in brick sizes and in the paving of the lower shelves. Both chimneys have a three to six course brick water table with a moulded

## STATEMENT OF SIGNIFICANCE (Include Personages, Dates, Events, Etc.)

top course.

The house is probably roged and is presently sheathed in a very late nineteenth or early 20th century claphoarding. Excluding that earlier cornice section previously discussed the eaves are boxed plain without any decorative beldmoulding. As a whole the entire exterior seems to have been renovated circa 1900.

The dwelling itself rests upon a high field stone foundation which encloses a full cellar. Access to the cellar is by a door flanking the S. wall of the E. chimney. The door is batten and retains an interesting wrought hasp.

On the interior, contrary to Mr. Jas. Wilpon's article "Maxwell Hall Survivors in Chas. Co.", Washington Post, 10/26/70, the house was found to be void of any early woodwork. It appears that all of the interior mouldings including door & window architraves, doors, mantles, floors and hardware was removed and replaced with the most architecturally unrelated Victorian Empire woodwork possible. Probably circa 1840.

The cellar possesses a bricked in fireplace opening on its E. wall and the blackened joists & summer beams in the E. room suggest that it was used as a kitchen. The joists appear to be sawn and are supported by two massive summer beams.

## FIELD NOTES: MAXWELL HALL, BY ORLANDO RIDOUT II

CH-196

Maxwell Hall

October 14, 1980

1 1/2 story 5 bay w/ gambrel roof and exterior chimney centered in gables. Rests on full foundation of stone, brickwork frames openings.

East facade center door w/ 2 9/16 on each side. 3 6/6 pitched roof dormers. Replaced heavy siding, replaced brick cornice, shingle roof, curb overhangs, no trim survives. Door and windows from c. 1830-50. Rough fieldstone foundation.

South gable - terminated by massive brick chimney w/ two sets of weathered shoulders, asym. in form, constructed w/ exceptionally small bricks. Flank wt on all 2 sides of chimney. Chimney has stone form. Evidence of possible blocked cellar w/ to it of chimney, cellar entrance to left. No other openings, windows and sashels are replaced.

West facade - door offset to left of center, no 1/1 to N and S. 2 cellar w/s. 2 6/6 pt dormers, center bay not expressed. Section of early cornice survives, w/ by scrolled brackets (dentil blocks) below soffit. Siding, cornice and cornice-trim removed. Part of center bay has been removed. Only modest porch left survives.

North side same by large asym chimney w/ 2 sets of weathering and no cornice wt. Evidence of small blocked opening or recess in center of the...

no opening, weatherboard & shingles replaced.

Cellar divided into 2 rooms by brick partition  
I to roof. Framing ~~is~~ consists of  
2 sets of summer beams w/ set small  
joists set + to ridge, shouldered into  
notches in plates and summers.

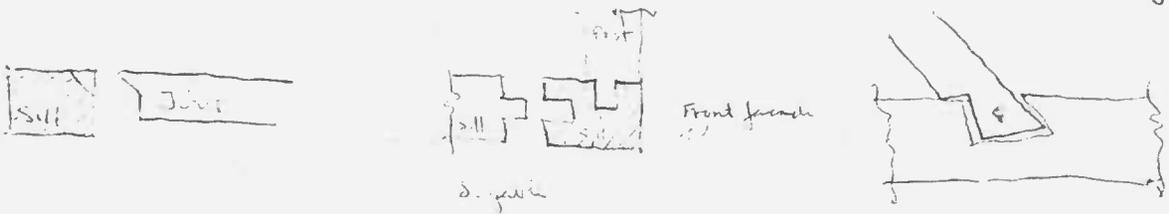

Fireplace in center of S gable wall,  
now blocked. (Stone).

19th c wood shutter on S cellar w  
of west wall. Plain vertical boards,  
beveled hazy battens, sliding wood  
bolt and catch. nails are <sup>early</sup> machine made

Ceiling flooring and framing is all  
white washed. Lark and pit sawn.

by very better door betw rooms.  
Double beaded joints, plain battens,  
hung on w/ H-b w/ w/ nails.  
Sliding wood catch - bolt.

inner room also white washed, no fp.

Front porch

Framing - by corner posts, step at 1st floor  
top plate, same thickness as studs  
up brace on gable wall, down brace on  
porch. See joint detail above.

Studs set + top and bottom

Joists hang in notch through top plate,  
to brace corner.

"Summer" runs down center of first floor,  
 joints are half-lapped than summer,  
 but do not run continuous.

First floor interior - fine room plan,  
 2 large parlors in front, N parlor is  
 larger of two. Large door opening  
 betw 2 parlors.

All doors and architrave trim is  
 c. 1830-50.

Fireplace partially collapsed and  
 rebuilt, had large opening w/  
 segmental brick arches.

Niche in chimney to rt of south fp,  
 plant closet in center of N chimney.  
 beaded siding divides N closet betw 2  
 rooms.

Stair hall centered on in half of  
 house, flanked by 2 small rooms, one  
 on each side. Stair runs against  
 S wall of hall. Begins as winder,  
 then straight run open string.

Basinets gone.

S wall of stair hall covered w/  
 ruin cloth, w/ wails. Then later (?)  
 in 18th c, ruin both sided on  
 ventrally w/ wails. Then  
 plastered w/ machine work.

6 panel tea ~~table~~ doors survive  
 in 2 small ~~at~~ rooms.

Second floor center hall thru here, 2 rooms  
 on each side. Now knee walls on  
 each fence, knee wall above stair  
 well has been reframed in 19th c.  
 Flat false plate saves.

Very unusual roof framing. -

Lower half of gabled framed up  
 a series of heavy principal rafters  
 and purlins ~~just below~~ curb eave.

The beams center into, joining  
 principal rafters, secondary rafters  
 into bottom edge of purlins,  
 purlins into into principal rafters.

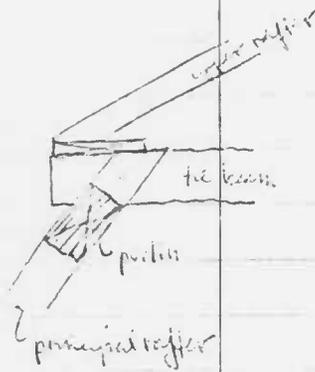

Ceiling joists notched over purlins,  
 support flat false plate

Principal rafters come up to bottom  
 of false plate. Upper rafters rest  
 on plate, all are same size,  
 meet at ridge in utp. Collar beams  
 are half lapped and not nailed.

Reinforcing wind bracing not nailed  
 to underside of upper rafters, single  
 piece nailed to under side, parallel  
 to ridge. Gable studs nailed and not  
 nailed. 7 principal rafter pairs, on

oppose 6 foot base.

No to on end of rooms, may have  
 no stone fire, but all appear 19th c.  
 Only wooden where on N gable are  
 pit stone tower in section. W. walls.
