Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 43 is a square, one-story, wood-frame building raised on a concrete slab foundation. The pyramid roof features overhanging eaves and exposed wood rafters. Replacement horizontal-lapped wood siding covers the exterior walls. Located on the south elevation, the primary entrance contains replacement plywood double-doors. Single square window openings on the east and west elevations have been enclosed with plywood. A projecting corrugated-metal shed roof has been added to the west elevation.

Building 43 was constructed as a watch house building in 1918 and is now used as a storehouse. Door and window replacements and residing have altered the appearance of the original structure obscuring its original function. Building 43 no longer possesses integrity of design, feeling, or materials.

Building 43 was constructed in 1918 as a watch house at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 43 was constructed as a minor administrative support facility and was not important individually for its association with the Powder Factory base line. Archival research did not indicate that the building is associated with distinctive characteristics of a type, period, or method of construction. The building does not represent the

Documentation on the property/district is presented in:  
Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*  
Building 62 is a two-story, L-shaped, reinforced concrete building raised on a concrete slab foundation. A flat roof with parapet surmounts the building. The exterior walls are finished in stucco. Located on the west elevation, the primary entrance comprises replacement glass double-doors and an original pedimented frontispiece. All windows in the building have been replaced with metal, two-light casement units and fixed four-light ribbon windows. A two-story, flat roof addition that incorporates a rooftop porch is located on the rear elevation. A steel railing surmounts the rooftop walls.

Building 62 was constructed in 1903 as a bomb proofing facility. The building was recently renovated and is currently being used as a conference facility. The building has received substantial modifications including changes to all its original doors and windows. A two-story addition to its rear elevation has altered the historic form, plan, and massing of the structure. The original concrete walls have been finished in stucco substantially altering the character and feeling of the original building. The interior has been renovated to accommodate office and conference space. Alterations have obscured the original function and appearance of this building and it no longer possesses integrity of materials, design, workmanship, or feeling.

Building 62 was constructed in 1903 as a bomb proofing facility for the Naval Proving Ground. The Naval Proving Ground is a facility significant a the original location of the proof work for the Washington Navy yard and its role in testing smokeless

Description of Property and Eligibility Determination: (Use continuation sheet if necessary and attach map and photo)

The river pump house (bldg. 100) is a one-story, three-bay, nearly square, brick structure terminating in a flat roof with parapet built for fire protection. The structure, built in 1941, rests on concrete piers and is surrounded by a metal cofferdam, which creates a settling pond. The windows are six-light-over-six-light, double-hung units. Metal, replacement doors provide access. The building contains four 2,000-gpm pumps for pumping water from the Potomac River. In 1960, the Navy installed a fog bell for protection from ship collisions during foggy weather. A new chlorinator house and heating system were installed in 1964.

The pump screen house (bldg. 100A) is a one-story, two-bay, rectangular brick structure terminating in a flat roof. The structure is located adjacent to the river pump house and rests on concrete piers.

A 1994 architectural survey assessed this property as not eligible for the National Register and classified it category IV under the Navy's HARP guidelines (Stevens 1994). Category IV properties do not possess historic importance.

Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 111 is comprised of the original block with at least five major additions ranging in construction date from ca.1921-1980. The building is currently utilized as a public works shop. The main block, is a one-story, brick and rusticated sandstone building raised on a sandstone foundation. A hipped roof featuring a four-bay dormer surmounts the main block. A monitor roof encloses a two-story north addition. Additions to the east elevation feature flat parapet roofs and a shed roof. The entire building exhibits an irregular footprint. The building contains multiple entrances. A former primary entrance on the west elevation features an arched entryway flanked by carved sandstone columns. The entrance has been in-filled with brick. Other entrances to the building include bay and door openings that contain metal doors and roll-up metal doors. The main block, of which only one elevation is visible, contains metal six-light awning windows. Two openings have been in-filled with brick. The north addition contains industrial steel-sash units, some of which have been replaced with corrugated metal siding.

The original block of Building 111 was constructed in 1899 as a one-story, rectangular powerhouse. This original structure is surrounded by five major additions that occurred between ca. 1921 and 1980. Constructed with contemporary materials, these additions have substantially altered the original design, plan, form, and massing of the building. The current structure also exhibits significant changes to windows and window and door openings. Entrances and windows have frequently been added and enclosed to accommodate later uses. Modern industrial equipment added to the roof and façade has obscured historic

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 113 is a two-story, rectangular, brick building raised on a concrete foundation. The original structure comprises a central section with two-story additions on the east and west elevations. The building is seven bays wide and six bays deep. A hipped roof surmounts the central section. The additions feature low sloped shed roofs. The building contains multiple entrances including single metal doors and roll-up metal doors. The building features industrial metal-sash awning windows embellished with concrete sills. Many window openings, including all the windows on the original structure have been in-filled with brick. Building 113 is connected to Building 111 at the north end.

The original block of Building 113 was constructed in 1899 as a two-story, rectangular, boiler house. Two major additions constructed ca. 1921 flank the entire east and west elevations of the original building substantially changing the original design, plan, form, and massing of the building. The current structure also exhibits significant changes to window and door openings. Window bays have been in-filled with brick or modified to accommodate door openings. All doors have been replaced with single metal and roll-up door units. As a result of these changes, Building 113 no longer possesses integrity of materials, design, feeling and workmanship.

Building 113 was constructed in 1899 as a boiler house at the Naval Powder Factory (1900-1945). The Naval Powder Factory

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 115 is a one-story, rectangular, wood-frame building raised on a concrete foundation. The structure is topped with a double-front-gable roof that features overhanging eaves with exposed rafters. Two metal ventilators project from each gable roof. The exterior walls are finished with corrugated metal and punctuated with double and triple window bands. The building also features twelve-light, fixed, aluminum sash windows on the gable ends. The building contains multiple entrances including single and double metal-doors.

Building 115 was constructed in 1910 as a storehouse. The current structure exhibits extensive changes to window and door openings. Windows have been enclosed with plywood and/or replaced with aluminum sash. All doors have been replaced with metal door and roll-up door units. The building's historic appearance also has been altered substantially by the addition of corrugated metal siding. Modifications have obscured or removed the character defining features of this building and it no longer possesses integrity of materials, design, and feeling.

Building 115 was constructed in 1910 as a general storehouse at the Naval Powder Factory (1900-1945). The Naval powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 115 no longer possesses the integrity necessary to convey important

Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 120 is a one-story, metal-frame building raised on a concrete-block foundation. The rectangular structure is topped with a corrugated metal gable roof that features overhanging eaves with exposed metal rafters. Two hipped roof metal ventilators project from the apex of the gable roof. The exterior walls are finished with corrugated metal panels. The primary entrance is located centrally on the south elevation and contains metal double-doors with strap hinges. A double eight-light fixed window is located on the west elevation.

Building 120 was constructed in 1904 as a warehouse. Minor alterations include the addition of ventilators and the rain gutter system. Building 120 possesses integrity of location, materials, design, and feeling. Building 120 is located among a concentration of substantially modified industrial buildings and does not possess integrity of setting.

Building 120 was constructed in 1904 as a warehouse at the at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Building 120 was utilized to store lime and cement for construction and was not individually important for its association with the Powder Factory base line. Archival research did no indicate that the building is associated with important persons at Indian Head. Building 120 is a simple metal-frame storage building with minor

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 127 is a scrap metal yard bordered by a chain-link fence. The northwest edge of the yard contains a 2-foot concrete retaining wall that parallels the fence.

The scrap yard was constructed in 1899 at the naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. The scrap yard was used to dispose of general waste and was not individually important for its association with the Powder Factory base line. Archival research did not indicate that the yard is associated with important persons at Indian Head. The scrap yard is a simple waste disposal facility that exhibits few landscape features. As an individual structure, the yard does not convey distinctive characteristics of a structure associated with the manufacture and storage of smokeless powder. The scrap yard does not represent the work of a master or possess high artistic value. The scrap yard is not likely to yield information important in prehistory or history.

The yard is not located in an area that contains a concentration of historic buildings with integrity sufficient to be delineated as an historic district.

Documentation on the property/district is presented in:  
Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*  
Building 135 is a two-story, metal-frame building raised on a concrete slab foundation. The rectangular structure is topped with a corrugated metal and rolled asphalt gable roof that features a clerestory monitor. The clerestory contains a band of metal-sash awning windows and horizontal metal vents on each elevation. The primary entrance is centrally located on the east elevation and consists of a large metal roll-up door and a separate single metal-door entrance. The north and south elevations contain ten regularly spaced steel-frame industrial sash windows. The north elevation also contains two four-light fixed sash windows. The building originally featured corrugated asbestos siding. Most of the building's siding has been replaced with green corrugated fiberglass panels.

Building 135 was constructed in 1915 as a nitrate plant. This facility was converted in the 1960s to a torpedo fuel chemical plant. The plant is now defunct and Building 135 is used as a storage facility. Alterations to the building include replacement of the siding with green corrugated fiberglass, replacement of the roof with rolled asphalt, and the replacement of select doors and windows. These changes have compromised the overall form and design of the building. The building no longer contains equipment related to nitrate production and is located in an area with substantially modified industrial buildings and new construction. Building 135 does not possess integrity of setting, materials, feeling, and association.

Building 135, Indian Head Division NSW

Page 2

---

Building 135 was constructed as part of a nitrate plant at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Nitrate production was directly associated with the production of materials used in the manufacture of smokeless powder. Building 135 does not possess the integrity of materials, association, feeling, or setting necessary to convey and important association with these processes. Archival research did not indicate that the building is associated with important persons at Indian Head. Building 135 is a metal-frame building with minor architectural embellishment. As an individual structure, the building does not convey distinctive characteristics of a building associated with a nitrate plant. The building does not represent the work of a master or possess high artistic value. Building 135 is not likely to yield information important in prehistory or history. Building 135 is not located in an area that contains a concentration of historic buildings with integrity sufficient to be delineated as an historic district.

Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

The building is topped with a corrugated metal gable roof that features a clerestory monitor vent that extends the length of the ridge. The exterior walls are finished with corrugated metal. The building contains multiple entrances. The primary entrance includes a centrally located roll-up metal door on the south elevation. Metal door replacement units flank the roll-up door. The north elevation contains replacement two-over-two-light, double-hung sash windows on the north elevation.

Building 193 was constructed in 1919 as a change house and is currently used as a shop. Alterations include the wholesale replacement of doors and windows. Several entrances and the monitor vent have been enclosed. The building's appearance has been substantially altered by the addition of corrugated metal siding to all elevations. Although the building retains its overall form, the cumulative effect of these alterations has resulted in a substantial change of appearance of the structure. The building no longer possesses integrity of materials and design.

Building 193 was constructed in 1919 Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Building 193 was constructed to provide support facilities for workers and was not individually important for its association with the Powder Factory base line. Archival research did not indicate that the building is associated with

Documentation on the property/district is presented in:  
Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*  
Building 215 is a one-story, rectangular, brick building raised on a concrete foundation. A flat roof with parapet surmounts the building. The east elevation includes a pair of centrally located metal replacement, double-doors and full-façade, flat-roof, porch addition. Most window openings are in-filled with brick.

Building 215 was constructed as a powder dry house in 1918. Modifications include wholesale changes to window and door openings and a minor addition to the east elevation. The original gable roof was replaced with a flat parapet roof significantly altering the original form and massing of the building. Modifications have obscured the original function and have removed the character defining features of the building. The building no longer possesses integrity of design, materials, or association.

Building 215 was constructed as a powder dry house for the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Building 215 was constructed for the storage of smokeless powder after its manufacture. The building does not possess sufficient integrity of design, materials, or association to convey its significance with the Powder Factory base line. The building does not convey distinctive characteristics of a type, period, or method of construction. The building does not represent the work of a master or possess high artistic value. Building 215 is not likely to yield information

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 226 is a two-story, irregular shaped, brick structure raised on a concrete foundation. A gable roof with exposed rafter ends surmounts the main block. The building incorporates a one-story, concrete block, shed-roof addition constructed ca. 1934 on its south elevation. Asbestos siding has been applied to the original brick and concrete walls. The building incorporates multiple entrances including glazed, wood-panel, double and single doors. Existing windows include six-over-six-light, double-hung wood sash units.

Building 226 was constructed in 1916 as an Acetic Ahnhydride holding facility. The Building is condemned as an environmental hazard. The building includes wholesale alterations to the windows, roofing and siding materials. An addition to the primary elevation (south) has altered the original fenestration and massing of the structure. Modifications have obscured or removed the character defining features of the building and its function is no longer apparent. The building no longer possesses integrity of design, feeling, materials, or association.

Building 226 was constructed in 1916 as an Acetic Ahnhydride holding facility for the Explosive "D" plant at the naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Building 226 was constructed to store

Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 226A is a rectangular, wood-frame building raised on a poured concrete foundation. A gable roof that features boxed eaves and asphalt shingles surmounts the building. The building is clad in sheet metal and rolled asphalt siding. The building contains eight-light, wood, awning windows, some of which are missing. The two entrances to this building are single wood doors with three glass lights. Two of these lights are in-filled with plywood on one door and completely missing on the other.

Building 226A was constructed in 1933 as an auxiliary building and is currently condemned. Building 226A appears to retain its original form and design. Modifications such as replacement siding and missing windows and doors have altered the primary character defining features of the building. Building 226A no longer possesses integrity materials. The building and the explosive "D" plant are abandoned and the structure no longer possesses integrity of setting and association.

Building 226A was constructed as an auxiliary building to Building 226, a facility constructed as part of the Explosive "D" plant at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Building 226A was constructed as a minor support structure for the Explosive "D" plant, an auxiliary chemical production facility not directly associated with the smokeless powder production process. Archival research did not indicate that the

Documentation on the property/district is presented in:  
Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*  
Building 232 is a one-story, rectangular, shed-roof structure raised on a concrete block foundation. The building is clad in corrugated metal siding. The building exhibits a one-story, shed-roof addition. The building contains a single double-door entrance on the primary elevation. The double-doors are wood with three glass lights. The side elevations contain windows enclosed with plywood.

Building 232 was constructed in 1916 as a control house. Major alterations include a rear addition, in-filled windows, and the conversion of the building into a workshop. These modifications have obscured the original function the building and have removed its character defining features. The building no longer possesses integrity of design, materials, or association.

Building 232 was constructed as a control house for a chemical plant at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Building 232 was constructed as a plant building for a chemical plant that was converted in the 1960s to an HDMH-Hydrogen production plant. The building was part of an auxiliary chemical production facility not directly associated with the smokeless powder production process. Archival research did not indicate that the building is associated with important persons at Indian Head. Due to significant modification, the building longer

Documentation on the property/district is presented in: Stevens, J. Sanderson, Laura J. Galke, and Elizabeth Barthold 1994 *Phase I Archeological and Phase II Architectural Investigations, Naval Surface Warfare Center, Indian Head, Charles County, Maryland.* John Milner Associates, Inc. Prepared for TAMS Consultants, Inc.

**Description of Property and Eligibility Determination:** *(Use continuation sheet if necessary and attach map and photo)*

The sensitivity lab building is a nearly square, poured concrete building with a shed roof. The building was originally constructed with a flat roof.

A 1994 architectural survey assessed this property as not eligible for the Indian Head Naval Proving Ground Historic District and classified it category IV (Stevens 1994). Category IV properties do not possess historic importance.

The building bears no direct association with important themes and events embodied by the Naval Proving Ground (Criterion A). Physically, the building does not possess distinctive individual characteristics representative of a type, period, or method of construction (Criterion C). This building does not possess the qualities of significance or integrity for listing in the National Register of Historic Places.

Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 253 is a one-story, rectangular, concrete-masonry-unit building raised on a concrete foundation. The building is topped with a flat built-up roof. The primary elevation contains a projecting one-story, one-bay entry vestibule surmounted by a low sloped gable roof. A single wood-panel door with nine lights is located on the south elevation of the projecting bay. The building contains a nine-light fixed sash window with a louvered metal vent inserted at the top. A chain link fence surrounds the pump house annex.

Building 253 was constructed in 1916 as a smoke test house. During the 1930s, the building was converted to the river pump house annex. Alterations included the entry vestibule addition, entry doors, and a ventilator. The building has been parged with a coat of stucco. Although the building retains its overall form, the cumulative effect of these alterations has resulted in a substantial change to the original appearance of the structure. The building no longer possesses integrity of materials and design.

Originally built as a smoke test house, Building 253 was converted to the river pump annex in the 1930 at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 268 is a one-story, rectangular, twenty-three bay by eight bay, brick building raised on a concrete foundation. The building is topped with a flat built-up roof that features a clerestory monitor. All windows in the clerestory have been enclosed with corrugated metal siding. The building contains multiple entrances with single metal and wood panel doors. All original windows have been enclosed with brick in-fill or corrugated metal. The building contains one-over-one light, double-hung aluminum sash replacement window units.

Building 268 was constructed in 1917 as a machine shop. The building was primarily characterized by the extensive use of industrial metal-sash windows. The wholesale replacement of original windows and doors has compromised the overall appearance of the building. The addition of new window openings has altered the original fenestration and design of the façade. These modifications have significantly altered important character defining features of the building and it no longer possesses integrity of materials and design.

Building 268 was constructed in 1917 as a machine shop at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Building 268 was constructed for public works and was not individually

Documentation on the property/district is presented in:  
Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*  
Building 270 is composed of two, one-story, rectangular, brick buildings connected by concrete loading bay. The building is raised on a concrete foundation and features a brick water table. A front gable, corrugated metal roof with four ventilators surmounts each building. A corrugated-metal shed roof tops the connecting loading bay. The primary entrance is located on the south elevation of the north section. The entrance incorporates a segmental arch opening and a metal door with strap hinges. The south elevation also includes segmental arch window openings that feature metal shutters with strap hinges. An altered rectangular opening that features a metal fire door is located on the north elevation the south section. A rail spur terminates at the loading bay.

Building 270 was constructed in 1918 as a magazine for the Explosive "D" plant. It is currently designated as the control building for the UDMH plant. With the exception of the addition of mechanical equipment, the building incorporates minor modifications. The building retains its overall form and materials and possesses integrity of location, and materials. Due to new construction and the new function of the plant, the building no longer possesses integrity of setting and association.

Building 270 was constructed in 1918 as a magazine for the Explosive "D" Plant, a chemical plant located at the Naval Powder Factory (1900-1945). This plant was deactivated after WWI and later converted into the UDMH plant. The Naval Powder

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 289 is a one-story, L-shaped, one-by-eight bay, brick building raised on a concrete foundation. An asphalt shingle side-gable roof features overhanging eaves. All original garage bays have been in-filled with stucco walls and one-over-one light, double-hung sash windows. The fourth bay contains a replacement wood double-door with sidelights.

Building 289 was constructed in 1918 as a garage. The building currently is used as an office. The wholesale replacement of original garage bays and doors has significantly compromised the overall appearance of the building. The interior has been renovated for office space. These modifications have obscured the original function and have removed important character defining features of the structure. The building no longer possesses integrity of design and materials.

Building 289 was constructed in 1918 as a garage at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Building 289 was a minor support structure that was not individually important for its association with the Powder Factory base line. Archival research did not indicate that the building is associated with important persons at Indian Head. Documentation on the property/district is presented in:  
Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*  
Building 290 is a one-story, irregular shaped, brick building raised on a concrete foundation. The entire building comprises at least four additions to the original front gable block. Additions to the original building include a brick, one story, four-bay, gabled section on the rear elevation; a three-bay, shed roofed porch on the northwest elevation; and a brick, one-story, one-bay gable roof block on the northeast elevation. The building incorporates select replacement and in-fill of garage bays, entrances, and windows.

Building 290 was constructed in 1918 as a one-story, rectangular garage. The building is currently used as an office and garage. The building includes at least four major additions significantly altering the original form, design, and massing of the structure. The building also includes the replacement of original garage bays, doors, and windows. Additions and modifications have significantly compromised the original appearance of this building and it no longer possesses integrity of design, materials, and feeling.

Building 290 was constructed in 1918 as a motor pool garage at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Building 290 was constructed as a support structure for the motor pool, and was

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*  
Building 314 is a one-story, rectangular, brick building raised on a concrete foundation. The building is four bays wide and nine bays long and is surmounted by a low-pitched gable roof. The main block incorporates the original building and a later addition of similar materials and design. A brick pilaster separates each bay. The bays feature multi-pane fixed and awning industrial sash windows that rest on concrete sills. The walls exhibit a corbel brick cornice. The building contains multiple entrances including replacement metal fire doors and metal roll-up bay doors. The building is connected to Building 377 on the east elevation by a wood frame, flat roof-port-cochere. A two-story, metal frame, ventilation system has been added to the north elevation. Building 379 is a one-story, gable roof addition attached to the south elevation.

Building 314 was constructed in 1919 as a carpenter shop and is still in use. Building 314 has received numerous additions and now comprises a large complex consisting of several shop buildings. Contemporary additions have been appended to side elevations substantially altering the original massing, fenestration, design, and plan of the original building. Building 314 no longer possesses integrity of design.

Building 314 was constructed in 1919 as a carpenter shop at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of

smokeless powder during World Wars I and II. Building 314 was utilized as a carpenter shop and was not individually important for its association with the Powder Factory base line. Archival research did not indicate that the building is associated with important persons at Indian Head. Building 314 is a highly modified utilitarian building and no longer conveys distinctive characteristics of a type, period, or method of construction. The building does not represent the work of a master or possess high artistic value. Building 314 is not likely to yield information important in prehistory or history.

Building 314 is not located in an area that contains a concentration of historic buildings with integrity sufficient to be delineated as an historic district.

Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Buildings 324 and 329-337 are similar one-story, rectangular, brick buildings raised on concrete foundations. The buildings originally were constructed from the same plans and design. Each building is four bays wide and five bays deep and is surmounted by an asymmetrical front-gable roof that features overhanging eaves. The front elevations incorporate four-bay shed roof porches supported by wood posts. The porches shelter a concrete loading bay that paralleled a railroad spur. On most of the buildings, the concrete bay has been eliminated by in-fill. The buildings incorporate replacement windows and doors. Many window and door openings have been enclosed with brick or plywood.

Buildings 324 and 329-337 were constructed in 1918 as powder dry houses. They are currently used for general storage and office space. Each building incorporates select changes to character defining features such as the doors, windows, loading bays, and rail spur. Most of the powder house interiors have been renovated for office space. Buildings 329 and 336 include additions to their primary and side elevations, alterations to the roofs, and the replacement of all doors and windows. The dry houses are no longer used for powder storage and do not possess integrity of design, materials, or association.

Buildings 324, 329, 330, 331, 332, 333, 334, 335, 336, 337 were constructed in 1918 as powder dry houses at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory

Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 376 is a one-story, rectangular, wood frame building raised on a concrete block foundation. The building is three bays wide and five bays deep and is surmounted by a front-gable roof. The walls are covered with corrugated steel panels. The east elevation exhibits a centrally located wood-panel, double-door surmounted by a fixed eight-light transom. A metal door is centrally located on the west elevation. Three, six-light, wood sash, pivot windows are located on the north and south elevations.

Building 376 was constructed in 1920 as a storage building and is currently used for paint storage. Building 376 exhibits few modifications and possesses integrity of design, materials, feeling, and association.

Building 376 was constructed in 1920 as a storehouse at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Building 376 was used as a storage building for the carpenter shop. The building was not individually important for its association with the Powder Factory base line. Archival research did not indicate that the building is associated with important persons at Indian head. Building 376 is a simple utilitarian support building that does not convey distinctive characteristics of a type, period, or method of construction. The building does not represent the work of a master or possess high artistic value. Building 376 is not likely to yield information important in prehistory or history.

Documentation on the property/district is presented in:  
Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*  
Building 377 is a two-story, rectangular, wood frame building raised on a concrete foundation. The building is ten bays wide and two bays deep and is surmounted by an asphalt shingle side-gable roof. The walls feature horizontal clapboard siding on the side and rear elevations. The front elevation exhibits a combination of open bays and bays enclosed by plywood and/or wood panel, garage doors. A projecting wood-frame catwalk extends from the second story along the length of the façade.

Building 377 was constructed in 1920 as a lumber storage building and continues to be used for that purpose. Building 377 exhibits minor modifications to the front elevation including several door replacements. In general, Building 377 retains its original form and maintains integrity of design, materials, feeling, and association.

Building 377 was constructed in 1920 as a lumber storehouse at the naval powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Building 377 was constructed to store lumber for the carpenter's shop. The building was a minor support structure that was not individually important for its association with the Powder Factory base line. Archival research did not indicate that the building is associated with important persons at Indian Head. Building 377 is a utilitarian support building that does not convey distinctive characteristics of a type, period, or method of construction. The

Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 379 is a one-story, rectangular, metal frame building raised on a concrete foundation. The building is three bays wide and five bays deep and is surmounted by a corrugated metal front-gable roof. The roof features three, monitor window vents. All walls are clad with corrugated metal panel siding. The north elevation exhibits a central roll-up, metal door. Two twenty-four light industrial sash with six-light awning windows are located on the south elevation. Three window openings have been in-filled with corrugated siding. Building 379 is connected to Building 314 on the northwest elevation.

Building 379 was constructed in 1919 as a car repair shed. It is currently used as a spray paint building. Building 379 exhibits select replacement of some windows and doors but retains its original form. In general the building maintains integrity of design, materials, feeling, and association.

Building 379 was constructed in 1919 as a car repair shed at the naval powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Building 379 was constructed as a repair shed for the motor pool and was not individually important for its association with the Powder Factory base line. Archival research did not indicate that the building is associated with important persons at Indian Head. Building 379 is a simple utilitarian support building that does not convey

Building 406 is a one-story, rectangular, wood-frame building raised on a concrete foundation. The building is five bays wide and two bays deep and is surmounted by an asphalt side-gable roof. All walls are clad with horizontal-lapped wood siding. The west elevation features a central wood panel garage door and four six-light, fixed, wood-sash windows. The primary entrance is located on the south elevation and incorporates a wood-panel, double-door. The building possesses integrity of design, materials, feeling, and association.

Building 406 was constructed in 1919 as a storage shed at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Facility 408 is a one-story, rectangular structure composed of five concrete walls (piers) surmounted by a steel girder railroad trestle. The trestle terminates at the fifty wall. The structure incorporates three triangular and two rectangular, reinforced concrete walls that support horizontal steel girders. The walls form four open storage bays below the railroad trestle. A concrete foundation wall remains where a now demolished rear wall once stood.

Facility 408 was constructed as a coal storage hopper. The structure currently is abandoned and partially demolished. Only the structural support piers remain from the original structure. All the walls and mechanical equipment have been demolished. Demolition has removed primary character defining features of the building and it no longer possesses integrity design, materials, feeling, and association.

Facility 408 was constructed in 1932 as a coal storage hopper at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Facility 408 was constructed to store coal for the power plant and was not important for its association with the Powder Factory base line. Archival research did not indicate that the building is associated with important persons at Indian Head. Due to demolition that has obscured the original design of the building,

Facility 417 is a recreation area that includes an asphalt basketball court and two concrete tennis courts. A chain link fence surrounds the tennis courts.

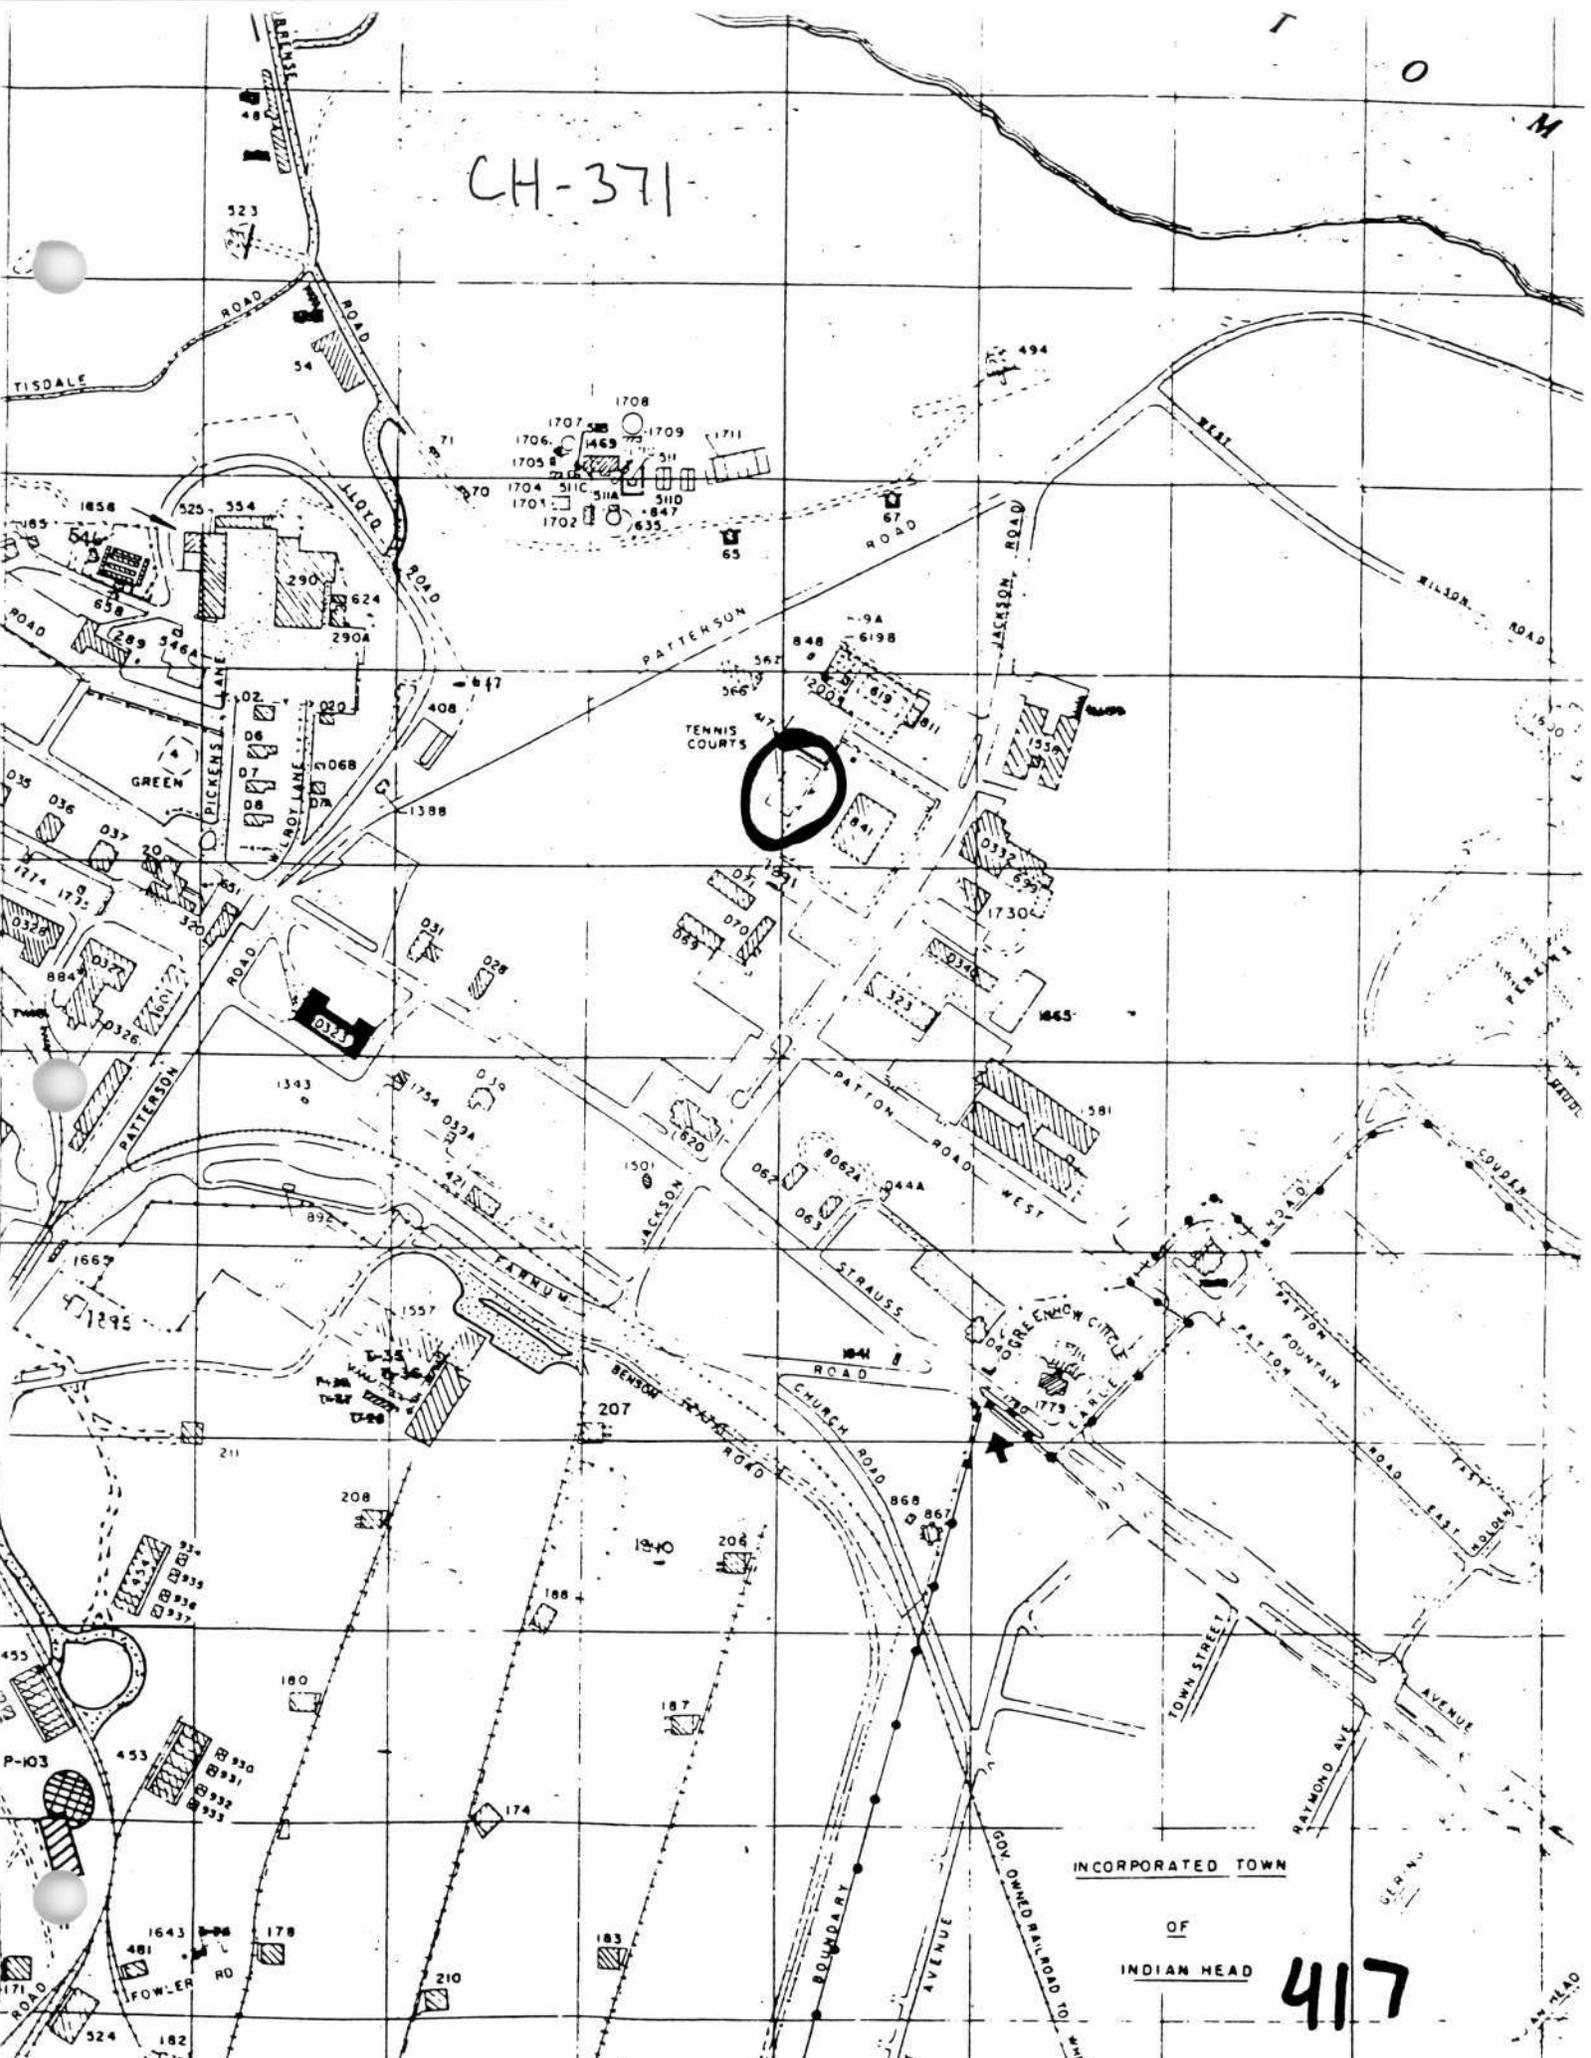

Facility 417 was constructed in 1935 for the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of smokeless powder during World Wars I and II. Facility 417 was constructed for recreational purposes and was not important for its association with the Powder Factory base line. Archival research did not indicate that the courts are associated with important persons at Indian Head. The courts are simple asphalt and concrete structures bordered by a chain link fence and do not convey distinctive characteristics of a type, period, or method of construction. The yard does not represent the work of a master or possess high artistic value. Facility 417 is not likely to yield information important in prehistory or history.

The courts are not located in an area that contains a concentration of historic buildings with integrity sufficient to be included in the Naval Powder Factory Historic District.

Powder Dryhouse No. 51, built in 1941, is a one-story, rectangular structure with a front gable roof. The building rests on brick piers. The siding and roof are clad with corrugated asbestos. The windows are six-over-six-light, double-hung, wood-sash units with simple wood surrounds. The doors are two-panel wood doors. A full-width porch spans the front elevation. The flat roof is supported by squared wood posts. The building was relocated by E.I. Dupont Co. ca. 1954 and remodeled with 87 drying bins.

The powder dryhouse was associated with the expansion of the Naval Powder Factory during World War II. The building was subsequently moved and remodeled during the Korean War. The building no longer bears a direct association with important themes and events embodied by the Naval Powder Factory (Criterion A) or possesses the distinctive characteristics of a type, period, or method of construction (Criterion C). This building does not possess the qualities of significance or integrity for listing in the National Register of Historic Places. Buildings that do not meet the criteria are classified category IV under the Navy's HARP guidelines. Category IV properties do not possess historic importance.

Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County Maryland, R. Christopher Goodwin & Associates, Inc. Frederick, MD 1997.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 551 is a one-story, rectangular, wood-frame building raised on a concrete foundation. The building is nineteen bays wide and two bays deep and incorporates at least two wind additions. An asphalt side-gable roof surmounts the entire building. All the walls are clad with horizontal vinyl and lapped wood siding. The principal elevation features a projecting, front-gabled, central block. The projecting wind contains an enclosed, shed-roofed, entry porch. The building features six-over-six-light, double-hung sash and one-over-one light, double-hung sash and one-over-one light, double-hung, vinyl sash windows.

The original, three-bay, central block of Building 551 was constructed ca. 1935 as a storage building. Subsequent alterations include the addition of a five-bay wind on the south elevation and a six-bay wing to the northeast elevation. Most windows and doors are replacement units. The entire building was renovated to accommodate office space. Major alterations to Building 551 have changed the original form, massing, plan, materials, and design of the structure. The building is no longer used as a storage building. Additions and alterations have obscured the original function of this building and have removed important character defining features. Building 551 no longer possesses integrity of design, materials, feeling, and association.

Building 551 was constructed ca. 1935 as a storage building at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the Navy and an important supplier of

Documentation on the property/district is presented in: RCGA, Inc.  
1998 *Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles County, Maryland.* Prepared for Engineering Field Activity-Chesapeake.

**Description of Property and Eligibility Determination:** *(Use continuation sheet if necessary and attach map and photo)*

The well water meter house was built in 1947 and is a one-story, wood-frame building terminating in a front gable roof. The rectangular building rests on a brick foundation. The walls are clad with wood shiplap and the roof is sheathed with asphalt shingles. An off-center wood door has one-light and one-panel. The windows are two-over-two, double-hung, wood-sash units. The building covers a small pit containing valves and water meters.

A 1998 architectural survey assessed this property as not eligible for the National Register and classified it category IV under the Navy's HARP guidelines (RCGA 1998). Category IV properties do not possess historic importance.

Description of Property and Eligibility Determination: (Use continuation sheet if necessary and attach map and photo)

The chlorinator houses, buildings 726 was built in 1953 and building 783 was built 1957. Building 726 is a one-story, nearly square, concrete-block building terminating in a flat roof with a parapet and metal ventilator. The building has an off-center metal replacement door. Buildings 783, 788, and 789 are one-story, concrete-block buildings terminating in gable roofs with ventilators. The buildings have an off center, three-light, three-panel wood doors and six-over-six-light, double-hung windows. All four buildings are used as a pump house and for chlorine treatment of the water.

The chlorinator houses are a late addition to the Indian Head water supply infrastructure, which was started by 1899. The buildings are one of a number of incremental improvements made to the system over the years. The buildings have no innovative technology and no ornamentation.

The chlorinator houses bear no direct association with important themes and events embodied by the Naval Powder Factory (Criterion A). Physically, the buildings do not possess distinctive individual characteristics representative of a type, period, or method of construction (Criterion C). These buildings do not possess the qualities of significance or integrity for listing in the National Register of Historic Places. Buildings that do not meet the criteria are placed in Category IV under the Navy's HARP guidelines. Category IV properties do not possess historic importance.

**Description of Property and Eligibility Determination:** *(Use continuation sheet if necessary and attach map and photo)*

The river pump house was built in 1953 and is a one-story, concrete-block, rectangular building terminating in a flat roof. The building has ten-light, metal-sash, pivot windows. A single-light, replacement metal door provides access. The 4,000-gpm capacity facility is used for fire protection and uses commonplace technology.

The river pump house is a late addition to the Indian Head water supply infrastructure, which was started by 1899. The building is one of a number of incremental improvements made over the system of the years. Modern replacement doors have effected the buildings' character-defining features.

The river pump house bears no direct association with important themes and events at Naval Surface Warfare Center, Indian Head (Criterion A). Physically, the building does not possess distinctive individual characteristics representative of a type, period, or method of construction (Criterion C). This building does not possess the qualities of significance or integrity for listing in the National Register of Historic Places. Buildings that do not meet the criteria are placed in Category IV under the Navy's HARP guidelines. Category IV properties do not possess historic importance.

The treated water storage tank, built in 1957, is a cylindrical metal storage tank 45' in diameter and 42' high. The tank stores non-potable water for the power plant. The tank is a common industrial structure.

The tank is less than 50 years old and does not possess exceptional significance. This structure does not possess the qualities of significance or integrity for listing in the National Register of Historic Places. Structures that do not meet the criteria are classified as Category IV under the Navy's HARP guidelines. Category IV properties do not possess historic importance.

The refrigeration building, constructed in 1953, is a one-story, concrete-block building terminating in a flat roof with cooling units on the roof. The rectangular building rests on a concrete foundation. The windows are ten-light, metal-sash, pivot windows with brick lintels. The offset entrance has double wood doors, each with three lights and one panel. The building was used to cool brine for air conditioning, a common technology for the time period.

The refrigeration building bears no direct association with important themes and events at the Naval Surface Warfare Center, Indian Head (Criterion A). Physically, the building does not possess distinctive individual characteristics representative of a type, period, or method of construction (Criterion C). This building does not possess the qualities of significance or integrity for listing in the National Register of Historic Places. Structures that do not meet the criteria are classified Category IV under the Navy's HARP guidelines. Category IV properties do not possess historic importance.

The well water pump house is a one-story, rectangular, concrete-block building, built in 1953, terminating in a side gable roof sheathed with asphalt shingles. The windows were infilled with concrete block. The below grade entrance is reached via concrete stairs. A replacement metal door provides access to the building. The building houses two 500-gpm pumps used for potable water distribution.

The well water pump house bears no direct association with important themes and events at the Naval Surface Warfare Center, Indian head (Criterion A). The building does not possess distinctive individual characteristics representative of a type, period, or method of construction (Criterion C). This building does not possess the qualities of significance or integrity for listing in the National Register of Historic Places. Structures that do not meet the criteria are classified Category IV under the Navy's HARP guidelines. Category IV properties do not possess historic importance.

The Goddard Power Plant, built in 1957, is an eight-story, steel-frame, coal-fired plant terminating in a flat roof. The irregularly shaped building rests on a concrete foundation. The walls are clad with corrugated asbestos and metal. The windows are metal-sash, industrial units. Three smokestacks dominate the roof. Metal doors access the building. The plant uses common technology of the time period to produce 150,000 lbs of steam/hour and 5,000 kW.

The power plant is an ubiquitous structure that bears no direct association with important themes and events at the Naval Surface Warfare Center, Indian Head (Criterion A). The building is less than 50 years old and does not possess exceptional significance. This structure does not possess the qualities of significance or integrity for listing in the National Register of Historic Places. Structures that do not meet the criteria are classified Category IV under the Navy's HARP guidelines. Category IV properties do not possess historic importance.

The acid tanks include two cylindrical tanks located in a shallow concrete pit built in 1961. A modern gable roof supported by 4"x4" posts shelters the tanks.

The acid tanks are ubiquitous structures that bear no direct association with important themes and events at the Naval Surface Warfare Center, Indian Head. The acid tanks are less than 50 years old and do not possess exceptional significance. This structure does not possess the qualities of significance or integrity for listing in the National Register of Historic Places. Structures that do not meet the criteria are classified Category IV under the Navy's HARP guidelines. Category IV properties do not possess historic importance.

The sewage treatment facility was built in 1970 and consists of four buildings: bldg 1471, chlorine contact chamber; building 1472, sewage plant; bldg 1473, sludge drying beds area; and, bldg 1474, meter/communicator house. The chlorine contact chamber is a reinforced concrete lined 19' by 13' pit, 8' deep with concrete walls. The sewage plant is a multi-level, reinforced concrete lined pit, 80' by 32' by 16' in depth, separated into small basins by concrete walls. The sludge drying beds are an earth-filled, reinforced concrete lined pit, 46' by 30'. The meter/communicator house is a reinforced concrete lined pit, 18' by 15', separated into smaller basins by concrete walls.

The sewage treatment facility is a ubiquitous facility that bears no direct association with important themes and events at the Naval Surface Warfare Center, Indian Head. The facility is less than 50 years old and does not possess exceptional significance. This facility does not possess the qualities of significance or integrity for listing in the National Register of Historic Places. The 200,000-gallon elevated water tank was constructed in 1972. It is 195.5' high and is supported on four legs resting on concrete footers and a central column.

The elevated water tank is one of a number of incremental improvements made to the system over the years. The water tank is a ubiquitous structure that bears no direct association with important themes and events at the Naval Surface Warfare Center, Indian Head. The water tank is less than 50 years old and does not possess exceptional significance. This structure does not possess the qualities of significance or integrity for listing in the National Register of Historic Places. Structures that do not meet the criteria are classified Category IV under the Navy's HARP guidelines. Category IV properties do not possess historic importance.

Description of Property and Eligibility Determination: (Use continuation sheet if necessary and attach map and photo)

The pager transmitter equipment building is an 8' by 8', wood building with a shed roof, built in 1991. A metal door provides access.

The building bears no direct association with important themes and events at the Naval Surface Warfare Center, Indian Head. The facility is less than 50 years old and does not possess exceptional significance. This facility does not possess the qualities of significance or integrity for listing in the National Register of Historic Places. Structures that do not meet the criteria are classified Category IV under the Navy's HARP guidelines. Category IV properties do not possess historic importance.

The neutralization system equipment building, built in 1993, is a one-story, concrete building with a shed roof. Windows are single-light, fixed units. A double metal door provides access.

The building bears no direct association with important themes and events at the Naval Surface Warfare Center, Indian Head. The facility is less than 50 years old and does not possess exceptional significance. This facility does not possess the qualities of significance or integrity for listing in the National Register of Historic Places. Structures that do not meet the criteria are classified Category IV under the Navy's HARP guidelines. Category IV properties do not possess historic importance.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

The demineralization plant, built in 1999, is a one-story, metal clad structure with a very shallow, gable roof. The windows are metal-sash, sliding units. A metal door with a small, vertical, single-light window provides access.

The building bears no direct association with important themes and events at the Naval Surface Warfare Center, Indian Head. The building is less than 50 years old and does not possess exceptional significance. The building does not possess the qualities of significance or integrity for listing in the National Register of Historic Places. Structures that do not meet the criteria are classified Category IV under the Navy's HARP guidelines. Category IV properties do not possess historic importance.

Description of Property and Justification: *(Please attach map and photo)*

The MIHP number CH-371 refers to the Naval Surface Warfare Center (NSWC) at Indian Head also known as the Naval Ordnance Station at Indian Head. The NSWC has not been evaluated as a single district, but rather using appropriate contexts and geographic groupings that resulted in 4 National Register Eligible Districts: the Naval Proving Ground Historic District (CH-492), the Residential Historic District (CH-490), the Naval Powder Factory Historic District (CH-491), and the Extrusion Plant Historic District (CH-493).

Buildings and structures evaluated for eligibility that are not within any of the districts are given the number CH-371 in order to represent their location within the NSWC.
