Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The Warfield "A" Cottage is a two story, flemish bond brick building which lies to the east of the Warfield Service Building. Displaying elements of the Colonial Revival style of architecture, "A" Cottage is composed of a central pavilion measuring three bays flanked by two connecting wings of four bays, and ending in two pedimented pavilions of two bays. A slate, gable roof covers the building. The west facade connects to a one story, covered passageway which links the quadrangle of buildings together.

Some features which appear on the east facade repeat on the rest of the building. A molded brick water table distinguishes the foundation from the first floor. Below the water table, ground level openings exhibit granite sills, brick jack arch lintels and a single sash window. The first floor windows display different lintels. The smooth stone sills repeat on the first floor windows but the lintels are composed of alternating stone voussoirs. The windows show a 6/6 double-hung sash. A brick string course divides the first and second floors. The sash of the second floor windows increases to 15/15 and the lintels exhibit a raised keystone. Wooden modillions decorate the cornice. Located on the middle of the central pavilion roof is an octagonal cupola. Doric colonettes, rounded arches with impost blocks and keystones characterize the cupola. It rests on a slate base and displays a dome roof and a spiked finial.

Each pavilion exhibits a triangular pediment gable. All three show modillions on the soffit and cornice while the ornamentation differs between the central pavilion and the two end pavilions. In the center of the central gable, there lies an oculus window with a smooth stone lintel and four keystone. In contrast, the end pavilions reveal a plain gable but display Palladian windows on the second floor. Ionic colonettes, Gothic sash windows, and stone impost blocks and keystone detail the Palladian windows. Another Palladian window appears on the west wall of the main pavilion, near the connection between the covered corridor and the central pavilion. The two end pavilions are also distinguished by central, interior chimneys.

Two noticeable additions have been made to "A" Cottage. The first appears on the east wall. The original porch has been replaced by a modern addition. The addition is a 9 bay, semi-circular portico. Single casement windows and paneled bases enclose the portico. It rests on a brick foundation and stone water table. The second major alteration to the building was the construction of a two story addition on the southern portion of the west wall. The addition displays the same fenestration and brick bond. The brick is slightly lighter in color and the cornice is not decorated by wooden modillions. Otherwise, the addition is very similar to the rest of the building.

Prepare both a summary paragraph of significance and a general statement of history and support.

Warfield "A" Cottage was constructed as a residential unit within the first complex of buildings designated for mentally ill women at Springfield State Hospital. "A" Cottage belongs to the original quadrangle of buildings erected in the Warfield group. Designed by a prominent Maryland architect, Joseph Evans Sperry, "A" Cottage in addition to the other three buildings was completed and occupied in 1900. The hospital hired Henry Smith and Sons as the contractors.

From its original conception, Springfield State Hospital was designed according to the colony or cottage plan which favored a group of individual buildings of small to moderate size in which to house and treat the mentally ill. This design emerged in the 1880's. At Springfield, the implementation of the colony plan began with the Men's group in 1898. Shortly after the completion of the Men's group quadrangle, construction began on the Women's colony, located almost a mile from the Men's group, in September 1898. The initial four buildings of which "A" Cottage is included were modeled after the men's quadrangle with a few minor changes which would facilitate the administration of the group. The group consisted of a Service Building and three detached two story cottages. The layout of the Women's quadrangle is significant because it reflects the direct implementation of the colony plan of hospital design. Combined with the Men's group, the Women's group provides the best example of the colony plan of hospital design in Maryland. The integrity of this design is intact today.

Joseph Evans Sperry received the commission to design the quadrangle of buildings at the Women's group. The architect was active throughout the Baltimore area having designed a handful of public buildings including Union Memorial Hospital, the Mercantile Trust and Title Building, and the Eutaw Place Temple. Sperry's work at Springfield added credit to the architect's variety of accomplishments. The Board of Managers were pleased with Sperry's design by stating in the Fourth Annual Report in 1899 that, "The Colonial style of architecture and large windows without bars or other protection, give the group more the appearance of a summer hotel than an insane hospital." The architectural elements which give the buildings that "summer hotel appearance" have been retained and appear in a maintained condition.
