Licksville School  
Tuscarora vicinity  
Private

Ca. 1847

The Licksville School is a one-story brick schoolhouse built about 1847 with a three-bay gable facade facing north and three bays on the east and west elevations. A one-story brick addition and a 1-1/2 story concrete block addition were added to the originally one-room structure in the 1950's. The original windows are large, 6/6 sash with gauged arches. The entrance is in the center bay, which now has a modern door with the transom covered. A one-story porch shelters the north elevation. The school was built to serve the village of Licksville, now called Tuscarora, about one mile west of the schoolhouse, and the southeastern corner of the Buckeystown district. It retains most of its original exterior form and the outline of its identifying sign panel in the north gable. On the interior, which has been considerably altered, the south wall has been stripped of its plaster finish, revealing inset wood lintels which were used to hang blackboards, maps, or other visual materials.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

CONTRIBUTING RESOURCE COUNT: 1

The Licksville School is a one-story brick building built about 1847 with a 1-1/2 story concrete block addition added in the 1950's, located on the south side of Dickerson Road opposite the intersection of Greenfield Road about one mile east of Tuscarora, Frederick County, Maryland. The schoolhouse has been used as a residence since about 1929 and once had a frame kitchen addition on the rear which burned in the 1950's and was replaced by the current concrete block kitchen addition. A second mid 1950's brick addition adjoins the original structure on the east elevation. The property also contains a non-contributing separate garage. The date of the school was determined by land records and architectural evidence similar to other mid-19th century schoolhouses.

The schoolhouse has a gable facade with the outline of the school sign panel still visible in the painted brick surface of the gable. The brick walls are 7:1 American bond. A one-story porch shelters the three-bay north elevation. The entrance is in the center bay, now containing a modern door. Above the doorway is a plywood panel which undoubtedly covers the original transom above the entrance. The flanking windows are large, 6/6 sash with modern storm windows on the exterior. The arches on the north elevation are concealed by the porch roof, but the three side bays on the west elevation show that the openings have gauged brick arches. The side elevation windows on the east elevation are concealed by the one-story brick addition. The gable roof is covered with composition material and has an off-center chimney for the present wood stove near the rear of the original building.

The interior of the schoolhouse was originally one room with plaster walls. With its conversion to a residence about 1929, interior partitions were added, and a raised floor level was installed at the rear of the original room. The present hardwood floors were probably added in the 1930's. The back wall of the schoolroom has been stripped of its plaster, revealing two inset wood lintels, probably for the hanging of blackboards. There is no indication in the brick surface below the wood lintels of filled-in openings which might indicate a door or window and the lintels are lower than the door and window heights of the original openings.

Prepare both a summary paragraph of significance and a general statement of history and support.

The Licksville School is a fair example of the mid-19th century brick rural schoolhouse which retains the overall form of its original construction in spite of mid-20th century additions. The outline of the sign panel is another important indicator of its original use. The interior, although much altered, currently reveals something of the methods of interior furnishing of the schoolhouse in the exposed wood lintels on the south wall, on which blackboards or possibly other visual aids were hung. This feature is probably common in the surviving rural schoolhouses of Frederick County from the mid-19th century well into the 20th century, but most have been covered by new wall finishes or interior walls. The Hookstown Public School No. 2 (F-3-129), an 1881 frame schoolhouse also in residential use, has the outline of the original blackboards (literally black-painted boards) under the modern wallpaper of the interior. In the case of the Licksville School, the wood members in the walls were clearly meant to be used for hanging boards, maps, or other visual materials.

Licksville was an early settlement on the road from Noland's Ferry to Buckeystown and Frederick at the junction of the early road from the mouth of the Monocacy River to the Middletown Valley and westward to Hagerstown. It was known as the most active slave market in Frederick County, according to Scharf's History of Western Maryland, and had several houses, a store and post office, a warehouse, and a tavern. The origin of the name Licksville has various theories, one that it referred to the "licking" a person could receive there if its peace and order were violated, a reflection of the rough canal and railroad crews who frequented the town, and another that before human settlement near the site, elks, deer, and other animals licked salt from the ground in the area. The village continued to be an active community with the building of the C&O Canal and the B&O Railroad in the 1830's a half-mile south of the road intersection. The railroad mail stop was known as Tuscarora after the creek which flowed into the Potomac River nearby. Licksville took on the name of the former mail stop in the early 20th century, although area maps retained the name Licksville until the 1950's, and still retains a post office in the former store building, now much altered. There are no other traces of its 19th century commercial life. The locating of the schoolhouse in 1847 away from the center of the village may have been intended to place it within reach of the farms in the southeastern corner of the district, which also included the Greenfield Mills area, then a thriving mill village on the Monocacy.
