

CAPSULE SUMMARY

F-1-212  
Cook-Culler Farmstead  
Adamstown vicinity  
Private

Ca. 1840-1940

The Cook-Culler Farmstead is centered on a brick dwelling originally built about 1840 with major alterations in the 1950's and 1960's, and its remaining contributing outbuildings, a frame bank barn, a wagon shed, and a concrete block dairy barn and milk house. The outbuildings appear to date from the period about 1920-1940. The house is significant principally for its circa 1840's architecture, revealed in the three-bay facade with simply molded lintels and corner blocks. Its original facade had a two-story porch on the south with a center door or jib window opening on the second level. In the 1950's or 1960's remodeling, the exterior was sandblasted and the second level of the porch was removed and the original column supports were replaced by the full-height concrete fluted columns. The second level door was converted to a window. The alterations also included a one-story addition on the east. These changes lowered the integrity of the structure, but the general form and some of the details of its 19th century origins are still in place.

## SECTION 7: Description:

CONTRIBUTING RESOURCE COUNT: 4

The Cook-Culler Farmstead is an agricultural complex centered on a circa 1840 brick dwelling with extensive alterations in the early and mid 20th century in the form of a two-story columned portico and a one-story addition to the east elevation. The farmstead also includes a frame wagon shed, a frame bank barn, and a concrete block dairy barn and milk house among its contributing structures, as well as several non-contributing agricultural buildings. The farm is located on the east side of Ballenger Creek Pike about 0.1 mile north of the intersection of Manor Woods Road near Adamstown, Frederick County, Maryland. The group of buildings is located in open fields with a driveway running southeast from Ballenger Creek Pike. The principal elevation of the house faces south and the outbuildings are located east and north of the house. The property is currently unoccupied. Dates of the buildings were estimated from architectural details, historical maps, Thomas family genealogical records, and land records.

The dwelling has a three-bay elevation on the south dominated by the two-story portico with fluted concrete Doric columns. The brick exterior has been sandblasted and the revealed bond pattern is 5:1 American bond. The center entrance and the window openings have simple molded lintels and bulls'-eye corner blocks. The roof is standing seam metal. The pitch of the roof is unaltered, indicating that the roof was designed to extend over an open, full-height porch. The center bay of the second floor has an infilled section below the sill, showing that it was once a doorway or a jib window, probably opening on the second story level of the original porch. This upper level was removed when the columns were added. The present porch has a concrete base and deck with the columns on brick bases. The windows are 6/6 and the doorway has an eight-panel door and a plain transom. The west elevation has two bays with plain lintels at the openings, 6/6 sash, and two 2/2 attic windows. The east elevation is largely obscured by the one-story shed extension, which appears to have been built in the 1960's. It has german siding and a standing seam metal roof. A single exterior chimney rises on the east gable end of the main section with its base enclosed by the extension. The two-story rear wing dominates the north elevation of the house. It originally had an open two-story porch on the west elevation. The upper level remains open, with a scroll-sawn balustrade. The lower level has been enclosed with concrete block and has modern window sash. The interior of the house was not accessible for this survey.

Wagon shed: The wagon shed adjoins a non-contributing concrete block garage located immediately east of the house. The wagon shed appears to have been built about 1920 and has vertical siding and sliding vertical board doors on the north elevation. A shed extension on the east side also has a set of sliding doors.

Prepare both a summary paragraph of significance and a general statement of history and support.

### SECTION 8: Significance:

The Cook-Culler Farmstead is minimally significant for the architecture of the dwelling, which shows by its corner blocks and shaped lintels and the infill below a second story window the evidence of its circa 1840 construction with a two-story porch. The appearance of the structure has been altered by sandblasting and the removal of the original porch and its replacement with modern fluted columns. The house was probably originally built by George Thomas, whose daughter Charlotte Thomas (1823-1904) married John W. Cook (died 1897) and received the farm from her mother in 1870. In 1905, John J. Culler (born 1858) purchased the farm from the estate of John and Charlotte Cook. Under his ownership, the farm achieved a high level of productivity, which was described in Williams & McKinsey's History of Frederick County in 1910:

"Mr. Culler is a progressive farmer who has worked hard and paid close attention to his business. His reward is financial success. His home, which is one of the most desirable farm properties in the county, is beautifully situated, well watered, and has fine meadows, and an excellent orchard. It is equipped with a comfortable two-story brick dwelling, a fine bank barn, and convenient outbuildings, all in excellent order. His scientific care has brought the land to a high state of cultivation."

The alterations appear to have taken place during the 1950's and 1960's while owned by George R. Bowers and Austin C. J. Wiles.

### 7.1 Description (Continued)

Bank barn: The frame bank barn is located northeast of the house. It may have a rebuilt upper structure on a 19th century stone foundation. The vertical siding and corrugated metal roof appear to be in better condition than the apparent date of the foundation, based on its stonemasonry. The north elevation has sliding doors to the barn floor, and the stall level on the south side has been enclosed with concrete block. Several non-contributing concrete block sheds adjoin the barn on the south and east.

Dairy barn and milk house: The rusticated concrete block dairy barn and adjoining milk house may have been built in the late 1930's or early 1940's. The upper frame structure has a gambrel roof with metal ventilators along the ridge. A non-contributing concrete silo adjoins the milk house.
