

F-3-79

Doctor R. Wachter Farmstead
Utica vicinity
Private

Ca. 1850; 1882

The Doctor R. Wachter Farmstead consists of a two-section stone and log or frame dwelling built by 1850 with considerable modern exterior alterations including a large sun porch on the former main elevation with a brick tool shed built about the same period and a large, white-painted bank barn with Gothic arched vents and the date 1882 painted in the east gable end. The house may have been built in its earliest section prior to 1850 by an as yet unknown owner, possibly named Bowersox. By 1863, the farm had been purchased by Michael Roberts who sold it in 1880 to Doctor R. Wachter, his son-in-law. Doctor Wachter's peculiarly rhyming name was not a reference to his profession, as he was a farmer who had the barn built and retained the farm until 1917. The subsequent concrete block alterations occurred in the 1920's when dairy farming succeeded grain farming as the principal agricultural activity in Frederick County. The barn is significant as a good representative of the late 19th century bank barn. A similar barn dated 1875 is located on the Hemp-Miller Farmstead (F-3-78) about 2 miles west. In addition, the Walkersville Planning Region to the east has several examples of similar big white barns.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

CONTRIBUTING RESOURCE COUNT: 3

The Doctor R. Wachter Farmstead is an originally agricultural complex, now a private residence and tree farm, centered on a circa 1850 stone and log or frame dwelling with considerable modern alterations, a small brick outbuilding of about the same date, currently used as a tool shed, and a large white-painted frame and stone bank barn with decorative Gothic arched louvred vents and the date 1882 painted in the east gable, with an attached concrete block milk house of about 1920-25. The buildings are located on the south side of Ramsburg Road about 1/2 mile northeast of Utica, Frederick County, Maryland. The farmstead overlooks formerly cultivated agricultural fields to the west and south which are now planted with evergreens in its current use as a tree farm. The date of the house and the brick outbuilding are estimated from architectural details and land record research.

The house has two stories and two sections, with a five-bay south elevation dominated by a modern enclosed sun room which conceals the center three bays. The eastern two bays of the original facade are stone and the western part is log or frame covered with german siding. The windows are 6/6 with replacement shutters. The gable roof is standing seam metal with a single interior chimney on the east gable end. The west elevation has two bays. A two-story rear wing with german siding and a modern bay window on the first story west elevation extends from the northwest corner of the main section. On the northeast side of the wing is one-story addition which extends along the angle between the main section and wing. It also has german siding. A rebuilt exterior brick chimney is located on the north end of the wing. Work on the immediate environment of the house is underway, with a flagstone terrace under construction near the rear addition. A modern swimming pool is located north of the house.

Brick outbuilding: The one-story, white-painted brick outbuilding is located near the southeast corner of the stone section of the house. Its original use is not known and the structure reveals little information to suggest theories. A glazed panel door is located in the west elevation and 6/6 windows are located in the east and west elevations. The roof is standing seam metal. Currently used as a tool shed, the interior shows no evidence of a chimney and wood shelves conceal much of the interior wall surface.

Barn: The large, white barn is the most visible feature of the farmstead and is located nearest the road. It has a stone foundation with vertical siding. The vents in the east, west, and south elevations have Gothic arches and louvred closings. In the gable ends are three-part groupings of louvred vents in a Palladian-inspired design. The date 1882 is painted in the east gable. The roof is standing seam metal and just under the eaves on the south elevation is a frieze of open vertical lath, providing more ventilation to the hay loft. The stall level on the south elevation is enclosed by concrete block to form a milking room, an alteration probably made in the 1920's. A concrete block milk house is attached to the east end of the barn and was probably built at the same time. The west end has a perpendicular, concrete block loafing shed adjoining the stone foundation. On the north side is the ramp with double sliding doors.

Prepare both a summary paragraph of significance and a general statement of history and support.

The Doctor R. Wachter Farmstead is significant for the architecture of the 1882 bank barn, a good example of the late 19th century barn, although somewhat altered by the enclosure of the stall level and the addition of the milk house and the loafing shed, probably in the 1920's. A similar barn dated 1875 is located about 2 miles west of the Wachter Farmstead on the Hemp-Miller Farmstead (F-3-78), and is probably the work of the same barn builders. No information has been discovered about the craftsmen; however, several large, white-painted barns of about the same period in the adjacent Walkersville Planning Region suggest that additional research and oral history could provide information on the builders. The house and outbuilding are of minimal significance because of modern alterations and unclear original use.

The original part of the house, presumably the stone section, may be older than 1850, but initial land record research did not reveal owners prior to 1863. The 1858 map of Frederick County shows a "Mrs. Bowersox" as the occupant, providing a possible lead to earlier deed references which has not yet been explored. The first mention of the farm in the 1910 History of Frederick County refers to Michael Roberts, the owner from 1863 to 1880. In 1880, the farm was purchased by Doctor R. Wachter, whose rhyming names initially suggest a professional title, but the 1910 history identifies him as a life-long farmer who married the daughter of Michael Roberts and purchased the farm from him. The County history described the farm's site as "a beautiful one and the place is one of the best farms in the district," a frequently used statement in the book. Doctor Wachter's biographical sketch confirms that he had the barn built, along with "all necessary outbuildings", indicating that several outbuildings once existed but have been demolished.
