

F-4-51

Church Hill Survey District
Myersville vicinity
Private

Ca. 1830-1912

The Church Hill district includes the 1830 stone church of St. John's Evangelical Lutheran congregation and the adjoining cemetery, the brick former parsonage of 1850, two altered log dwellings of about 1840-1850 in their original form, and a 1912 frame schoolhouse. The dwellings have several contributing outbuildings, ranging from the ruins of a stone springhouse to frame domestic and agricultural outbuildings mostly from the late 19th century. The stone church was built with a three-sided gallery in the hall plan, an unusual feature for rural churches of the second quarter of the 19th century. The brick parsonage has had few exterior changes except for the removal of a one-story entry porch and its replacement with a modern deck. The other two dwellings have later additions, with both german and artificial modern siding and altered exterior porches and doorways. The schoolhouse has been the least altered and may be the only remaining one of its design in the County. Church Hill exemplifies the initial stage of development of rural communities in the early 19th century, often centered on the establishment of a church, to which roads from the surrounding areas converged, leading to road traffic which resulted in economic opportunities such as a blacksmith or a wagon shop, as was the case at Church Hill, although the shop has disappeared. The development scenario was strengthened by the establishment of a school near the church. Overshadowed eventually by nearby Ellerton and Myersville, both of which had post offices, Church Hill remained an identifiable place because of the active church and school until the closing of the school in about 1930.

CONTRIBUTING RESOURCE COUNT: 17

The Church Hill Survey District encompasses about 4-1/2 acres centered on St. John's Evangelical Lutheran Church and cemetery at the intersection of Church Hill Road and Ward Kline Road near Myersville, Frederick County, Maryland. The district includes the stone 1830 church and its cemetery, the brick Parsonage of 1850, a frame 1912 schoolhouse, and two log and frame residences possibly dating from about 1840-1850 with approximately 11 contributing outbuildings varying in date from about 1850 to about 1910 distributed among the residential properties. Three non-contributing outbuildings, all of concrete block construction, are also within the district. Eighty-five percent (85%) of the structures contribute to the district's significance in architecture, religion, and education. The church and cemetery are in active use and the residences are currently occupied. The schoolhouse is used as a storage building. The general condition of the structures varies from ruins to excellent.

The district is located on a hill which slopes to the south. Church Hill Road approaches from the south and curves toward the west to pass between the church and the cemetery, meeting Ward Kline Road which intersects from the west just north of the church. The schoolhouse is located on the west side of Church Hill Road about 100 feet north of the intersection. The residences are located west and southwest of the church. Following are brief descriptions of the contributing buildings:

St. John's Evangelical Lutheran Church: The 1830 church is a one-story fieldstone structure with a hall plan and a gable roof currently covered with pressed metal. The east elevation has two bays with recessed entrances in each bay. The soffits around the doorways are paneled and the doors have 5 horizontal panels. The rectangular transoms are stained glass of the early 20th century period. Two stained glass windows are located in each bay which light the gallery level of the interior. Centered in the gable is a brick-arched, semi-circular window with a leaded glass panel reading "St. John's Lutheran Church by the Sunday School". At the southeast corner of the building is a stone dated 1830. Above the east elevation is an open frame belfry added in 1895. The north and south elevations have three bays each. The south elevation has early 20th century stained glass rectangular windows. The north elevation windows are textured 2/2 sash. The west elevation has three bays of stained glass rectangular windows. An exterior brick chimney is located on the south elevation. A central brick chimney rises from the roof ridge, but may not be in current use. Located near the southwest corner of the building is a concrete block privy, one of the non-contributing buildings in the district. The church has an 1898 decorative cast iron fence on the east and north sides of the lot. The gate identifies the manufacturer as Ward Fence Co., Portland, Indiana. A concrete block fence is located along the south side of the church lot. The interior of the church was not accessible for survey, but local histories state that it had a three-sided gallery when built, an unusual feature for a small rural church of the period. The gallery may have been altered to provide space for a Sunday School and other alterations have also taken place.

Prepare both a summary paragraph of significance and a general statement of history and support.

The Church Hill Survey District is a fair example of a small rural community of the early 19th century centered on a church to which roads from the surrounding farms led, and near which a school was later built, exemplifying the importance of religious structures in the development of rural villages. The 1873 Titus Atlas map shows that the area had a wagon shop and at least one other residence located on Church Hill Road, indicating the beginnings of a commercial life as well as a religious and educational purpose. However, the proximity of Ellerton, which had several mills, shops, and a post office dissipated the development of Church Hill as a separate settlement. The log church built about 1790 and known as Daniel's Church was, however, the center of religious activity for Ellerton and the surrounding farms and its replacement of 1830, the present St. John's Church, continued in the same status. The stone church is a good example of the hall type of the second quarter of the 19th century, with additions through the 1890's and the early 20th century. Its three-sided gallery, if still mostly intact, would be an unusual feature among churches of its type and period. The 1912 schoolhouse may be the only surviving one of its particular design. An apparently identical schoolhouse built in 1906 was formerly located near Middlepoint, but has been moved to another location. An earlier school at Church Hill was located near the south side of the cemetery. The Church Hill School was closed about 1930.

Church Hill may be compared with Pleasant Walk, which had similar beginnings in the early 19th century with a stone church, Mt. Olive U. B. Church (F-4-47), a blacksmith shop, several residences, and a school. However, its integrity has been much diminished by alterations to the existing dwellings, and the loss of the shop and the school. Church Hill's retention of the possibly unique schoolhouse, the brick parsonage with few exterior changes, and the stone church with clearly identifiable periods of alteration in historic times set it apart from Pleasant Walk and other settlements which never developed beyond an initial stage.

7.1 Description (Continued)

Cemetery: The cemetery is roughly rectangular and is located directly east of the church across Church Hill Road, which also turns to run along the south wall. The cemetery has a low fieldstone wall with concrete coping which was built in 1913. The earliest legible dated stone observed is about 1792.

Parsonage, 3251 Ward Kline Road: The brick parsonage was built in 1850 and has two stories with a flemish bond east elevation and 5:1 American bond on the other elevations. It has three bays on the east and evidence on the brick shows that a one-story entry porch once was attached to the center bay. A modern wood deck has been built to replace the former porch. The door way has a 6-panel door, paneled soffits, and a three-light transom. The window openings have plain wood lintels and sills with 2/2 sash. The roof is slate and the cornice is boxed. The chimneys are located on the interior walls at the north and south gables. The north and south elevations have two bays each and a one-story brick rear wing extends from the northeast corner. It has a pressed metal roof and an interior chimney on the west end. The outbuildings of the parsonage are the ruined walls of a stone springhouse located southeast of the house, a frame privy with vertical siding and a corrugated metal roof located south of the house, a frame garage with vertical siding and a standing seam metal roof located west of the house at the edge of Ward Kline Road, a small frame barn with vertical siding and a standing seam metal roof, a one-story shed with german siding and a standing seam metal roof, and a frame chicken house with vertical siding and a corrugated metal shed roof. The outbuildings all probably date from the period 1870-1900, except the garage which may be of the first decade of the 20th century, and the stone springhouse which was probably built at the same time as the house. The interior of the parsonage was inaccessible for this survey.

John Palmer House, 3247 Ward Kline Road: The two-story house is probably partially a log structure with an extension of frame or log on the north. The exterior is covered with german siding and the roof is standing seam metal. On the east elevation are two separate porches, the southernmost partially enclosed and obscuring the arrangement of openings on that section. The northern porch is an entry porch on a three-bay elevation. The sash is 2/2 and the lintels are molded. The chimney is located in the center of the building. On the west elevation is a modern carport. Near Ward Kline Road is a small, deteriorated frame shed with a corrugated metal shed roof and vertical siding; its use is undetermined. South of the house is a small frame barn with vertical siding and a standing seam roof. Also on the property is a non-contributing concrete block garage.

Dr. Easterday House, 10630 Church Hill Road: The two-story dwelling is located southwest of the church and has been considerably altered over the years. It probably has a log structure in part. It has two stories with asbestos shingle siding and two bays facing east. A modern concrete porch rises to the doorway, probably concealing an originally exposed stone cellar on this elevation. The one story porch has modern wrought iron columns. The windows are 2/2 with molded lintels. The gable roof is corrugated metal. A modern two-story addition with vinyl siding is attached to the south end, enclosing a brick chimney at the junction of the two sections. The addition also has an exterior

7.2 Description (Continued)

brick chimney. Three frame sheds with vertical siding and corrugated metal roofs are located southwest of the house; they are currently in use as animal sheds. They were probably built about 1900-1910.

Church Hill School, west side of Church Hill Road: The one-story frame school was built in 1912. It has a raised stone foundation with a roughly rectangular plan and a hipped pressed metal roof. The exterior is covered in weathered german siding. A central tower forms the center bay on the east elevation, through which is a recessed, arched doorway with double doors with 5 horizontal panels in each and a plain transom. The flanking two bays have 4/4 sash. The north and south elevations have four bays, also with 4/4 sash, although those on the north elevation are boarded. The tower has a louvred belfry and a hipped roof. The west elevation has no openings. An interior brick chimney is located in the western slope of the roof. The interior was inaccessible for this survey, but was described by the owner as having one room with cloakrooms flanking the entrance. A tongue-and-groove wainscot is visible through the east elevation windows.
