Ca. 1840

Annandale Road Log House

Emmitsburg vicinity

Private

The Annandale Log House is one of the principal buildings in a surrounding district of predominantly log dwellings. Built circa 1840, this 2 story building of log construction has exposed logs and V-notching. There is a concentration of twelve buildings along a section of Annandale Road that indicate a small community of the nineteenth century. The district is important in demonstrating log construction techniques of a mountain community.

7.1 Description:

Annandale Road extends from Mt. St. Mary's College and runs north for several miles. Approximately 1/2 mile north of the college, a district of predominantly log houses begins with orientation to the road. The district continues until Annandale Road intersects with Scott Road. A concentration of residences is limited to a one-half mile stretch on Annandale Road.

The Annandale Road District is comprised of twelve principal buildings located on the west and east sides of the road. Ten of the buildings are probably of log construction. There is one brick house and one stone building. All of the log buildings are 2 stories in height with the exception of one 1 & 1/2 story house; the stone house is one story; the brick is 2 stories. Most of the log buildings are sided in various materials including weatherboard, german siding, aluminum siding, asbestos siding and asphalt shingling. Logs are exposed in three of the houses. They vary in width from 3 to 4 bays with one being a double pen log plan (16510 Annandale Road).

One building that typifies the district is located between 16611 and 16617 Annandale Road. Built circa 1840 (according to the owner), this 2 story building of log construction has exposed logs and V-notching. It rests on a stone foundation. There are two interior end brick chimneys on the tarpapered gable roof. A shed roof dormer is in the center of the roof.

The main elevation faces east towards the road and has 4 asymmetrical bays. There is an off-center door and three 1/1 windows on the first floor; the second floor has three 1/1 windows, symmetrically placed. A one story open porch with a flat roof runs the full facade. The west elevation has three additions that are contiguous to each other. One 6/6 window is visible in the main block. The north gable end is 2 bays wide with 1/1 windows. A rear shed addition is german sided and has a 6/6 window. The south gable end is also 2 bays wide with 1/1 windows and two 4 light attic windows. A german sided, 2 story addition with a flat roof is 2 bays wide with 6/6 windows.

This house shows the log construction methods of the district with V-notching and an asymmetrical facade. It has undergone some changes such as replaced windows and new porch construction, and some of the logs show signs of deterioration on the north elevation. The average condition and the alterations of this dwelling are representative of the other buildings in the district.

8.1 Significance:

The Annandale Log House is one of the principal buildings in a surrounding district of predominantly log dwellings. There is a concentration of twelve buildings along a section of Annandale Road that indicate a small community of the nineteenth century. The district is important in demonstrating log construction techniques of a mountain community.

There are no other comparable nineteenth century districts to the Annandale Road community in the region. The district is unique to the county in providing concentrated examples of log housing in a mountain setting. Later early twentieth century examples of log districts appear with an emphasis on vacation housing.

Most of the buildings in the district were constructed by 1858 judging from the Bond Map. Fifteen dwellings appear on the 1873 map indicating a loss of some of the buildings since that time. The district may have developed in response to the founding of nearby Mount Saint Mary's College in 1808 which began as a collection of log houses (Williams, Vol. I, 522). However, residences of a grander scale and more expensive construction dating from the mid-nineteenth century are also located near the college on Route 806.

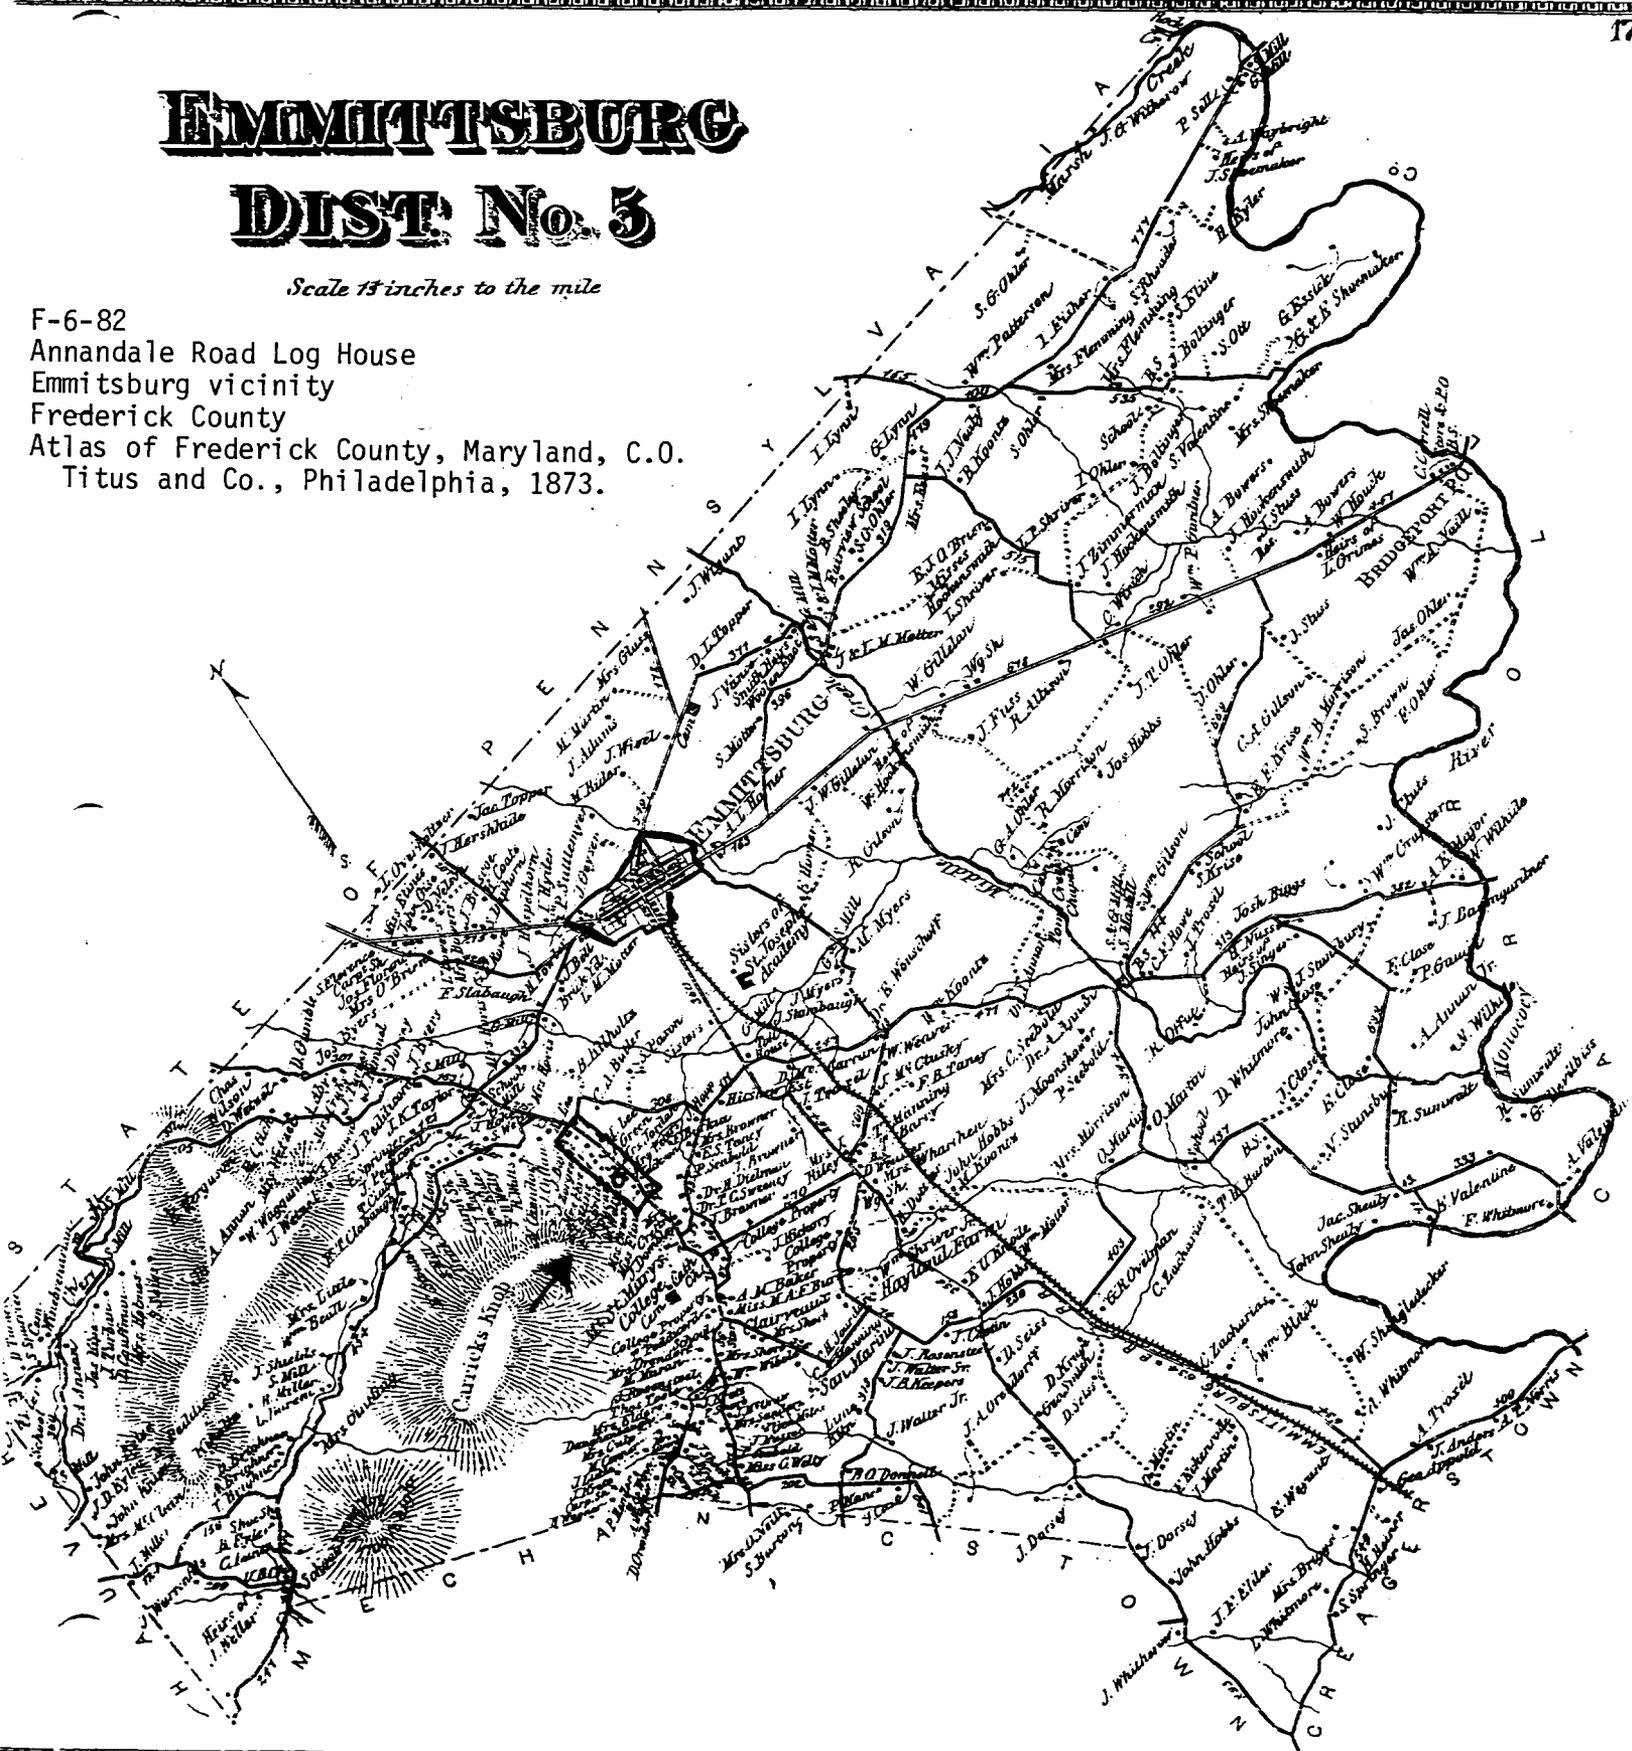

An earlier survey form on the double pen log building, circa 1890, (16510 Annandale Road) in the district notes that construction was primitive with logs cut by an adze instead of a saw despite the location of the district near a sizable town, Emmitsburg (Anthony James Survey Form, VI, 102).
