Legore Quarry Workers Housing - San Diego Road

Woodsboro, Maryland

Private

The Legore Quarry Workers Housing - San Diego Road is a group of seven identical plan frame houses built for the workers at the neighboring Legore Quarry. They are immediately identifiable by their similar exteriors, paint colors, and regularly spaced siting. They represent a period of paternalistic labor management in American industry.

7.1 Description

The Legore Quarry Workers Housing - San Diego Road is a row of seven identical plan two-story frame houses built about 1900 on the south side of Oak Hill Road near the intersection with Woodsboro Pike (Maryland Route 194). The principal elevations face southwest toward San Diego Road, a private road.

Each house has a T-shaped plan, with the bottom leg of the T a gable facade on the street elevation. A one-story porch wraps around the gable end on three sides. White painted german siding, green corner posts and trim, and red standing seam tin roofs are common to all the houses. Stone foundations are visible at each house. Two interior brick chimneys rise above the roofs. Most sash is 2/2, but some individual alterations are present. The porches are also slightly different, primarily in the railings. Most have no porch balustrades, but at least two have plain square post railings. One has scroll-sawn brackets.

No interiors were accessible for this survey.

Associated with some of the houses are small shed-like outbuildings located to the rear of the houses which may have once served as privies, meathouses, or other domestic outbuildings, but are now principally used for storage.

The setting of the houses is at the northeast edge of the quarry operation. The unpaved San Diego Road separates the evenly spaced houses from tailing dumps which screen views of the quarry from the houses.

The street addresses included in the survey district are: 11719, 11727, 11737, 11745, 11753, 11761, 11767 San Diego Road.

8.1 Significance

The Legore Quarry Workers Housing - San Diego Road is one of 4 groups of company housing associated with the Legore Lime Quarry, established in 1861. The housing groups exemplify a paternalistic labor management policy common in American industry during the last quarter of the 19th and first decade of the 20th centuries. The housing groups are probably unique in Frederick County during this period. Architecturally, the San Diego Road houses reflect the form of the vernacular farmhouse of the period with an altered floor plan. In the community planning sense, the group is unified and distinguished by identical design, regular siting, and uniform color scheme. These factors set the houses apart from other rural vernacular dwellings and defines them as a "company town".

The workers housing groups differ slightly from each other in plan and siting and between the two companies which built them. In most cases, however, the groups are readily identifiable by the linear arrangement, proximity to the quarries, unified color scheme, and common plan within each group. The context of the mining industry in Frederick County is not fully researched, but the number of housing groups extant at the Legore site is probably significant, as is the continuing operation of the quarries. Further research needs to be done to identify construction dates of the housing groups, companies and their operating history, and interior plan and features.
