DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

This is quite a massive structure, facing Noble's Mill road to the east and Deer Creek to the south. The mill is three and one-half stories tall, the lowest level of coursed stone, the remainder of horizontal bevelled frame with corner posts. Overall, the structure measures five bays by three, the longer sides oriented north-south. The window sashes are 6x6's and are emplaced in nailed frames. The top floor has a very high gable on the eastern and western extremes, with three apertures in a triangular arrangement on both ends. There are three board-and-batten doorways situated on the eastern elevation, one above the other, with a wooden stairway leading from the second floor portal to the ground on the northern exposure is a similar door on the second story, sheltered by a shed-roof projection. A block and tackle beam and an exhaust ventilation are the only details of the eastern wall. The gable front roof slate, with gabled dormers on either side of the ridgelines. There are a pair of these, with 6x6 sashes, on either slope, with a third dormer on the southern slope located above the other two. The Millrace, which can still be seen, flowed from the impounded pond further up the creek, and turned an undershot wheel located under a frame shelter and masonry basin on the western exposure.

The nearby iron bridge was installed in 1893 by a Canton erecting outfit, and is a modified Pratt Span.

## STATEMENT OF SIGNIFICANCE

The deeds records the presence of a mill on the property as early as 1844, when there was such a plant operating as a saw and Clover Mill. It was originally called Smith's Mill, perhaps after the miller, for no Smith ever owned the property. The earliest reference to the property was in 1790, when Priscilla Gover left a portion of land to Rober Gover, who owned it for over thirty years and established what was referred to in subsequent deeds as Gover's Mill. The existing mill was said to have been constructed in 1854 by Gerrard Gover, although Priscilla Gover was the owner at that time. It must be assumed that either the original structure burned or over lived it's usefulness after many years in the Gover Family, the mill was acquired by Benjamin Noble, an Englishman who had worked for Gover, in 1869. It was soon after converted for grist milling, using an undershot wheel. Taking advantage of swift flowing Deer Creek, which allowed the mill to operate at forty horsepower, the facility was capable of producing forty barrels of flour per day. The 1878 Martenet Map shows quite a little settlement; Benjamin Noble's House, Gover's gristmill, a blacksmith shop, a sawmill, and several Gover houses. It was converted from Burrs to Rollers, in 1888, and in 1894, Benjamin Noble devised the operation to his son, William Noble, the younger Noble worked the mill until 1941, when it was briefly operated by several other until 1950.

Architecturally, the building is not inspiring, but it is an extremely massive and imposing building, making for a Currier and Ives setting alongside the stream and the wrought iron bridge.

Dear Mr. Peck: re: Restoration of dam at Noble's Mill

It has come to my attention that Mr. William G. Shimek and his wife would like to buy Noble's Mill on Deer Creek, restore it, and adapt it for use as an artist's studio and residence.

This seems to me a wonderful and imaginative thing to do because it would guarantee a productive future for one of the most historic structures in Harford County. The mill itself is eligible for listing in the National Register of Historic Places and is included in the Maryland Historical Trust's Historic Sites Survey and Inventory.

Of course milling along colonial lines is not practicable in the last quarter of the 20th century and, as a result, many of the state's old mills have been abandoned and are suffering rapid deterioration; many have already collapsed into ruin, a fate which seems certain for Noble's Mill unless a new use can be found for it--that is precisely what Mr. Shimek is proposing.

The value of the structure, it seems to me, lies not just in the mill itself (interesting as it may be) but in the entire assemblage of mill, mill race, iron bridge, and dam. The Trust, in fact, has praised the whole complex and its "Currier and Ives setting alongside the stream."

The Shimeks, as you know, would like to restore and repair the dam, damaged in 1972. I believe you must approve their plans and I sincerely hope you will be able to give them every assistance.

If you would like to discuss this in more detail, please give me a call at 879-2000, extension 207.

Thank you for your cooperation.

Sincerely yours,  
*Christopher Weeks*
