Describe the present and original (if known) physical appearance

DESCRIPTION SUMMARY:

Facing south on the south side of Asbury Road near Churchville in Harford County, Maryland, Webster's Forest is a stone house constructed in two sections. The eastern section is the older, dating prior to 1800. It stands three bays wide, one and a half stories tall above a high basement, with a gambrel roof. Its interior exhibits a side-hall plan, two rooms deep, with a corner fireplace in each room. Despite severe damage by fire in 1966, exterior walls, chimney, floor structures, most of the flooring, and portions of the north cornice of this section remain original. An exterior basement entrance retains its original oak strap hinges. Original interior detailing includes exposed second floor joists with ovolo-planed edges, and second-story floorboards beaded on their undersides. An early 19th century fireplace surround survives in one of the second-floor rooms. The two-bay, gable-roofed west addition appears to date from the second quarter of the 19th century; due to falling grade, its ground story is at the same level as the basement of the east section, and its two upper stories coincide with the two floors of the older part. The ground story retains a wide cooking fireplace which features an iron crane and "beehive" oven. Above the kitchen, the dining room on the first floor retains virtually all its original details, including paneled doors flanking the chimney, opening into a china closet and former dumbwaiter. Original architrave trim and fireplace surround also survive. On the second floor, two original doors remain.

GENERAL DESCRIPTION

Located on the southwest side of Asbury Road 1,800 feet north of its intersection with Maryland Route 136 is Webster's Forest, a stone house of two principal sections. The principal facade faces southeast, hereinafter, for simplicity in description, called south. The older section is the easterly and it is stuccoed, one and one-half stories in height above a high basement, with a steep gambrel roof and a narrow porch across its south front. The addition to the west is three stories in height with a gable roof; due to falling grade, its first story is at the same elevation as the basement of the older section and the upper two stories are at approximately the same elevations as the two floors of the older section.

The oldest section of Webster's Forest traditionally dates from the late 17th century; remaining visible original elements indicate construction prior to 1800.

The older section is expressed as three bays in length on its south facade, two on its north, the westerly bay of each facade contains an entrance and the westerly bay is, itself, an early addition (in two different stages, as described below) and only its south wall is of stone, the other two walls being of frame construction. The easterly bays contain two rooms with corner fireplaces and the westerly bay is a side hall containing an open staircase, together creating a typical side-hall plan two rooms in depth. The original stone walls surround

GENERAL DESCRIPTION (Continued)

the two rooms to the second floor level; the east gable is of stone but wood partitions separate the second floor rooms from the hall. Wood partitions separate the two rooms in all stories including the basement. A brick chimney rises above the peak of, and flush with, the east gable.

Together the two rooms measure, externally, approximately 20 by 32 feet; the hall bay is approximately 11 feet wide, making the total external dimensions of the older section approximately 31 by 32 feet. However, the hall bay appears to have been built in at least two stages, the southerly 22½ feet being one section, the northerly 9½ feet being the other. Sequence and significance of these two stages is undetermined. The location of a staircase, before the addition of the hall, is not indicated.

The older section was severely damaged by fire in 1966. All windows are modern as is the staircase, most interior finishes and the roof. The exterior walls, portions of the north cornice, the chimney, the floor structures and most of the flooring are original as are the basic forms (but not the details) of the replaced materials. Two shed-roofed dormers are on each side of the house; they and the windows in the stone walls throughout contain new 6/6 sash. Two small basement windows beneath the south porch were not destroyed by the fire; each window is unequally offset toward the east from the windows above; the easterly window contains a six-light sash, the westerly window a four-light sash of 8 X 10 inch panes, set in a wide plain frame.

The basement story contains a wide fireplace in the northeast corner of its south room. Exterior access is through a door in the east wall immediately south of the fireplace. A doorway opens through the stone wall into the basement beneath the hall. The partition between the south and north rooms is of pit-sawn unplanned vertical boards, attached with hand-made wrought nails. The original door has been replaced but the original oak strap hinges are preserved; the wooden pintels remain in place, chamfered and tapered for nailed attachment to the partition. First floor framing is exposed, the joists of hewn material; diagonal framing associated with the triangular chimney appears original and unchanged.

The east ends of the hewn first floor joists beneath the southerly 22½ feet of the hall are supported by a hewn girder against the stone wall which separates the rooms from the hall, indicative of this bay's being an addition; the west ends of the joists extend into the stone west foundation wall. Approximately 9½ feet south of the exterior face of the north wall is a joint in the stone west foundation wall, immediately north of which is a hewn girder, its west end supported on the foundation wall, its east end on a small stone pier against the original stone wall separating the hall from the rooms. Log joists spanning north-south extend from this girder to the north foundation wall of the hall.

GENERAL DESCRIPTION (Continued)

An enclosed winding stairway rises from the basement to the first floor in the southwest corner of the hall. An open stairway, with an intermediate landing, all dating from ca. 1966, of stock materials, rises at the north end of the southerly section of the hall, the location of the stair which was destroyed in the 1966 fire. A hewn oak post is against the east wall of the hall, above the small stone pier in the basement as described earlier; an unused mortise remains in its west face, as though from a girt, now removed.

Modern flooring covers the original in the first story hall but the original floors remain in the two rooms. The former corner fireplace of the south room has been closed but its hearth remains. The corner fireplace in the north room is open, its stonework exposed to the ceiling. Immediately below the joists in the diagonal face of the chimney is a long shallow niche of unknown original function, approximately 48 inches long, 6 inches high and 4 inches deep. Original second floor joists are exposed in the ceilings of the two rooms, planed smooth, with an ovolo profile planed into each bottom corner. Second story floorboards are beaded on their undersides. Finishes and trim date from after the 1966 fire, all using stock elements of that period.

The second floor plan resembles the first, but as described earlier, no stone wall exists between the hall and the rooms. Like the first story, original flooring remains in the two second story rooms and modern flooring is in the hall. The northerly room has a corner fireplace, its mantel consisting of an architrave surround, plain frieze, bedmoulding and moulded shelf, appearing to date from the early 19th century. The south room has no fireplace, that original condition indicated by the unbroken floorboards and joists below.

No early framing remains in the attic.

The west addition appears to date from ca. 1835-1850. Of carefully laid stone with large roughly worked quoins and lintels, it is two bays in length, measuring approximately 21 feet square. Entrances are through the west end near the southwest corner and through the east bay of the south front. All windows are 6/6 except those of the basement story; now the south window is a 1/1 but it was originally 6/6 also and basement windows of the north side, due to rising grade are 3/3. Window and door frames are wide, with applied backbands. A shed-roofed porch extends across the basement story of the west end, sheltering the entrance and the massive brick "beehive" oven which protrudes from this wall near the northwest corner.

Internally, this wing consists of a single room in the ground and first floors, with two smaller rooms in the second. The ground floor room is a kitchen and it retains its wide fireplace, fitted with a crane for cooking; the "beehive" oven is intact north of the centered fireplace, complete with a wrought iron door. A dumb-waiter formerly rose to the first floor dining room in the recess north of the chimney. Straight-sawn ceiling joists are exposed.

GENERAL DESCRIPTION (Continued)

The dining room in the first floor retains virtually all of its original details. Double doors open into a wide china closet south of the chimney and a single door opens to the former dumbwaiter in the northwest corner. A stepped plain separates the four flat panels from the stiles and rails of these doors, which are hung on cast-iron Baldwin Patent hinges. Architraves throughout consist of triple plains flanking the deepest one, all separated by shallow steps; plain corner blocks are at the top corners. Similarly planed pilasters support a beaded frieze in the mantel and the wide plain shelf is supported by a quarter-round bed and two scrolled brackets. The firebox is arched.

Many second floor details have been replaced but a few similar original ones remain including two doors, one with a Carpenter-type lock. All roof framing is modern.

The house is located within a landscaped and planted yard, and approached from Asbury Road by a drive lined with mature hardwoods. The landscaping provides a strong visual contrast with the open pastureland which surrounds the nominated parcel. There are no significant outbuildings on the property.

Statement of Significance (in one paragraph)

SIGNIFICANCE SUMMARY

Webster's Forest is significant for its architecture, which reflects the combined influence of disparate vernacular traditions. The gambrel-roofed form of the older section is generally associated with the 18th century architecture of the Tidewater region in Maryland, and is highly unusual in Piedmont Harford County. The house incorporates elements of the architectural tradition of nearby southeastern Pennsylvania in its corner fireplace, beehive oven, fine stonework, and siting against a partially-excavated earthen bank. Documentary and architectural evidence tends to confirm local tradition that the gambrel-roofed section of Webster's Forest is the earliest building extant in Harford County. The beehive oven in the ca. 1835-1850 section is unique in the county. Despite extensive damage by fire in 1966, the house retains considerable integrity, exhibiting numerous significant architectural features including its original form, exterior walls, fireplaces and oven, floor framing, much of its flooring, and trim - particularly in the dining room on the second floor of the gable-roofed section. Replacement work which followed the fire, while not a precise restoration, remains compatible with the period and style of the building..

HISTORY AND SUPPORT

The tract, Webster's Forest, was patented in 1704 by John Webster (1667-1753). (DD5/213, 214; PL2/11). The first of Harford County's Webster family to settle here, he first patented a tract in the area in 1696. He belonged to Bush River Friends Meeting, and was appointed a delegate to the Nottingham Monthly Meeting in 1730. Webster testified in 1740 when the commissioners appointed to resolve the boundary dispute between Pennsylvania and Maryland met in nearby Joppa. It was probably this John Webster who built the gambrel-roofed section of Webster's Forest.

In his will, Webster left to his son, Samuel, "all that parcel called Webster's Forest and the tracts called Websters Enlargement and Howards Forest." (29-374).

Samuel Webster (1710-1786) was the tobacco inspector at Joppa, an important and well-paid office. In the 1783 Tax Assessment for Harford County, Harford Upper Hundred, he is listed as the owner of 50 acres of Webster's Forest. The soil quality was poor, and he owned no slaves, In his will 130 acres of Webster's Forest were bequeathed to his son, Richard (AJ/197).

HISTORY AND SUPPORT (Continued)

Richard Webster (1741-1824) was one of the first Methodist preachers born and trained in the United States. In 1768 he studied under Robert Strawbridge and by 1770 his home was a preaching center. Several years later Francis Asbury, well-known Methodist leader, appointed Richard Webster and another man as traveling preachers for Kent and Cecil Counties. Webster held this position until 1774 when he received his first conference appointment in Baltimore. He was later a preacher on the Chester (County, Pennsylvania) Circuit, and in 1787 he filled in for Asbury in much of his work when the latter became ill.

In Harford County, Richard Webster gave a piece of Webster's Forest at Calvary for a Methodist chapel, and also helped to pay for the construction of the church. His son later built a schoolhouse near this chapel, and Webster's or Calvary Mill was situated under the hill below the building.

In the 1798 Federal Direct Tax Assessment, Harford Upper Hundred, Richard Webster is listed as the owner of 360 acres, worth approximately \$1,200 (p. 88). On this land was one dwelling house and four outbuildings valued at \$250 (p. 32). The description was as follows (p. 10):

One dwelling house 30 by 20 feet stone,
kitchen 20 by 18 feet stone, old milk
house 12 feet square log, spring house
12 by 12 feet, corn crib 16 by 10 feet
wood.

At Richard's death, the Webster's Forest property passed to his son, Henry, termed "the lands and mansion house where I now live." (SR1).

Henry Webster (1793-1872) was the man who built the school at Calvary, by the chapel his father had begun. A farmer, he added the three-story stone section to Webster's Forest in about 1850. Henry apparently farmed well and made the land his family had owned for generations prosper. When he died in 1872, the property went to his son, William. (BHH8/306).

William Webster (1831-1914) made his living from the Harford Mutual Fire Insurance Company. His son, younger John, farmed the land well, he willed the property to the wife of his older son, Richard Henry, believing that proper. Several years after Henry's death, the farm and house were sold to John F. Joesting. The present owners are relatives of the late Mr. Joesting.

VERBAL BOUNDARY DESCRIPTION

The boundaries of the nominated property are shown on the attached sketch
map.

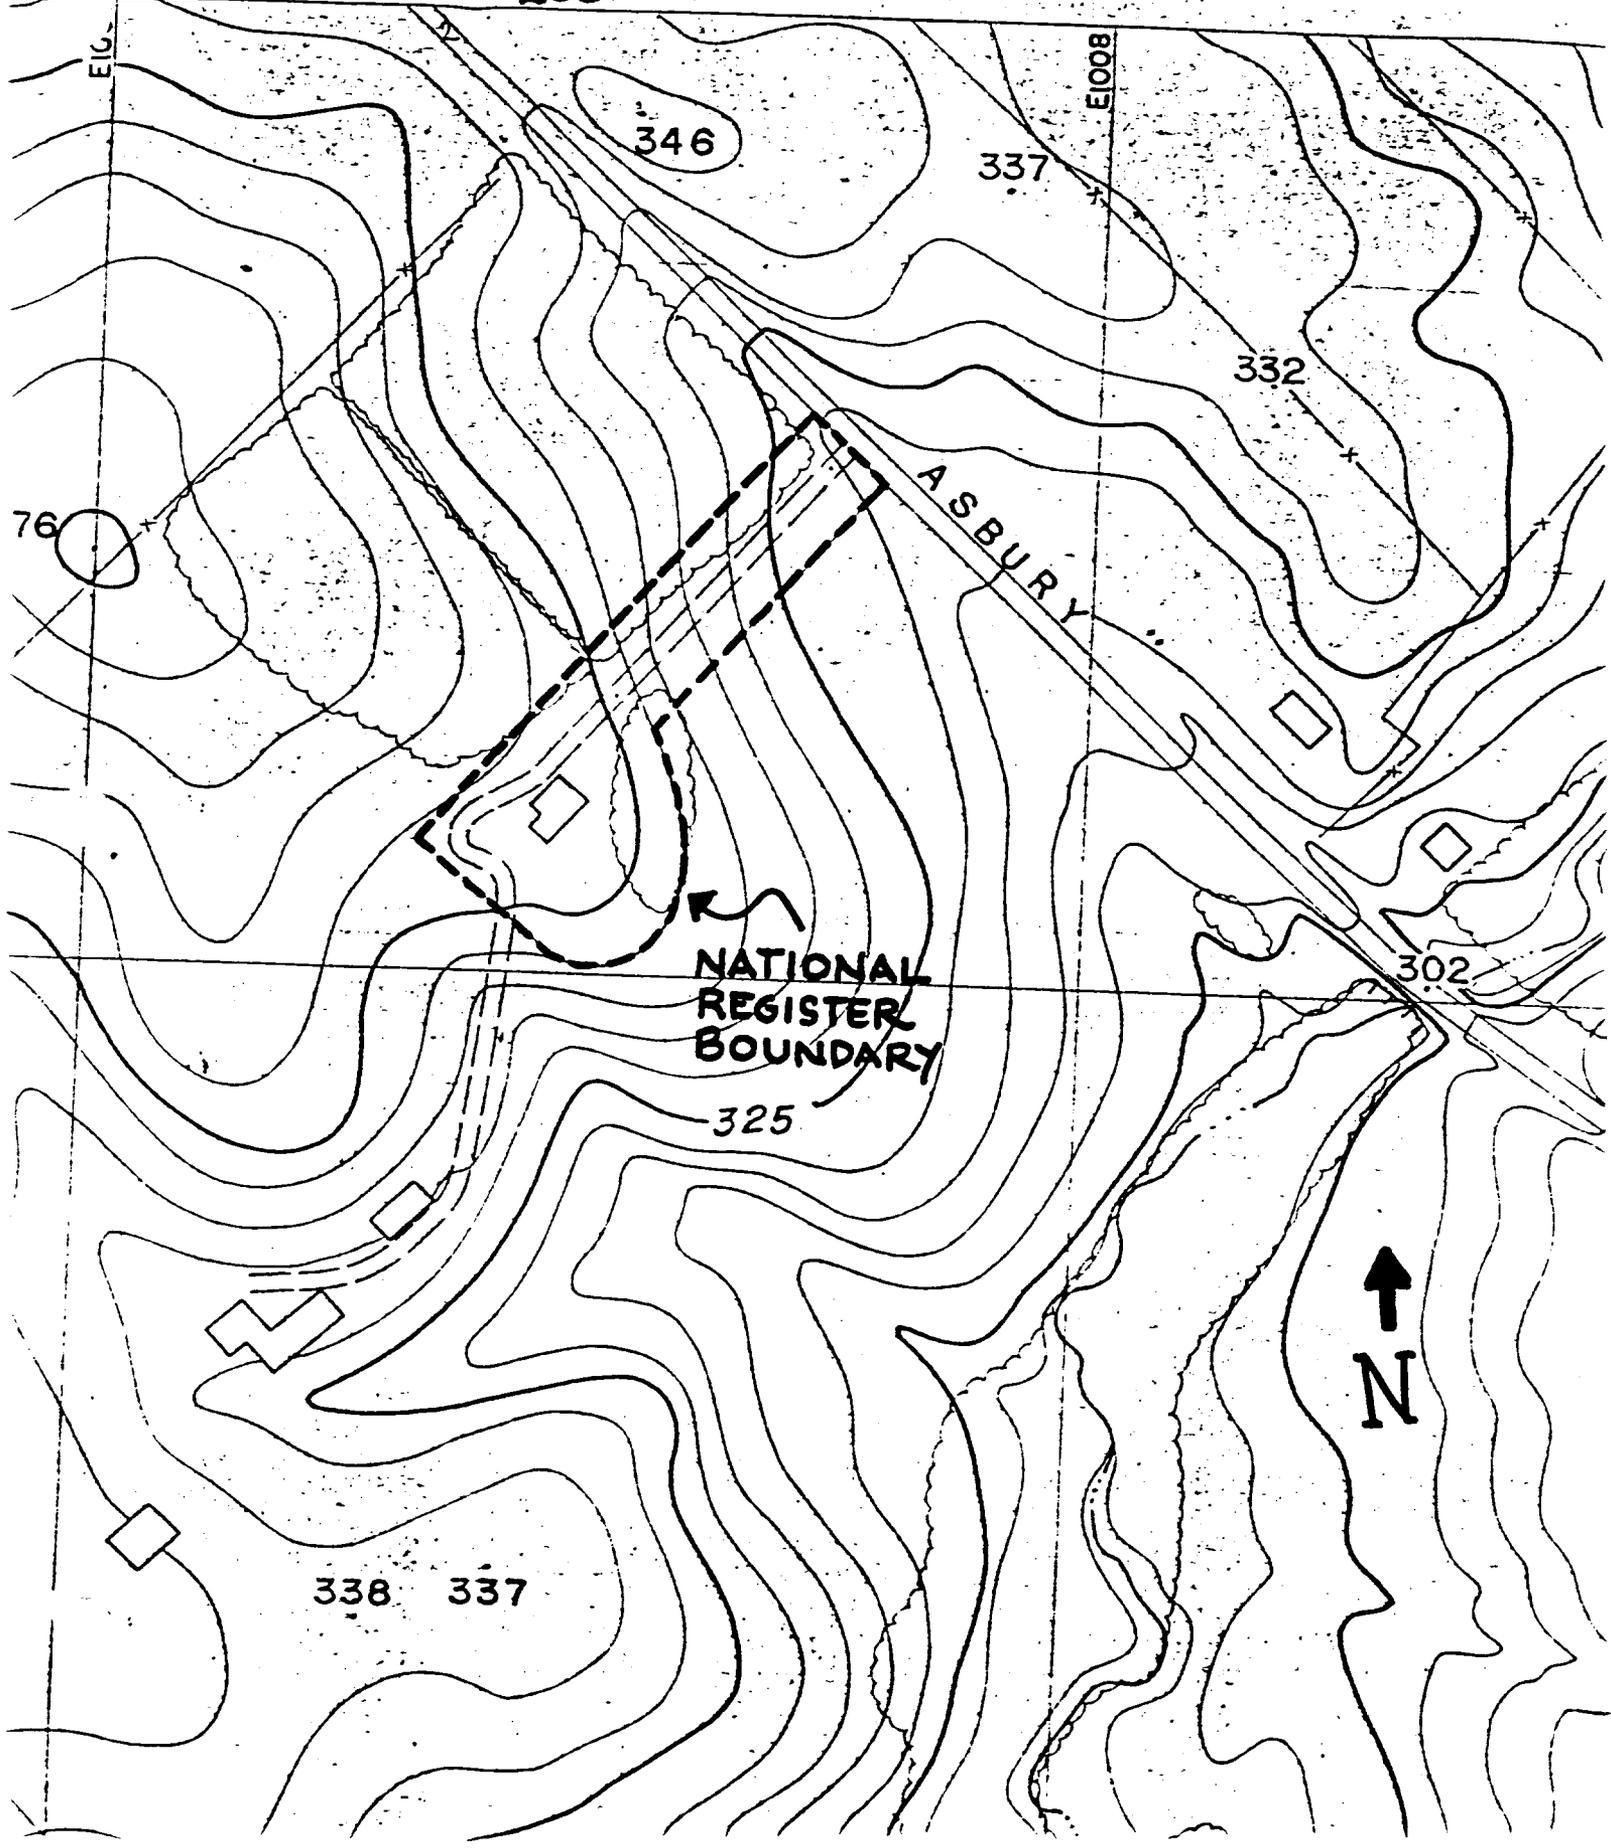

BOUNDARY JUSTIFICATION

The boundaries of Webster's Forest are defined by Asbury Road on the north-
east; by a row of mature trees lining the driveway on the northwest; by a
decline in grade on the southwest; and by a fence line and plantings on the
southeast. These boundaries encompass the house within its historic landscaped
setting, and preserve its historic relationship to Asbury Road.

HA-442 WEBSTER'S FOREST

The gambrel roof section of the old house at "Webster's Forest" contributes to the importance of this structure as a Harford County resource, for it is said to be the oldest home standing in the county, as stated p. 274-275 in C. Milton Wright's Our Harford Heritage:

"Probably the oldest house still standing in Harford County is Webster's Forest. This structure, with walls 30 inches thick, was built in 1696 either by a Webster or a Paca. It was erected near the junction of "Webster's Forest," "Webster's Enlargement," and "Paca's Enlargement," and originally contained only two rooms. A hall was added later and a west wing was constructed in 1850. In 1763 Webster's Forest was bequeathed by John Webster to his son, Samuel Webster. The last of the Webster family to live on the estate was William Webster who died in 1914."

DESCRIBE THE PRESENT AND ORIGINAL (If known) PHYSICAL APPEARANCE

This early home was ~~been~~ constructed in ~~this old beauty~~ in two distinct sections,

The eastern part under a wide gambrel roof probably dates dating from the ^{early 18th} century, ^(possibly late 17th century), the western ^{part has} a shallow A roof. The ridge runs east-west.

The east section, two bays by two, is a story and a half, with two flat dormers on each side ^{stone steps} and a fully useable basement, unlighted, has two rooms, each with a ^{large} corner chimney, ^{large} for cooking, with a ^{timber} lintel about 18" square by 10'.

On the main ~~full~~ floor a hall runs through the house, north-south, at the west side of this part. East rooms have corner fireplaces. The hall area, ~~is~~ said to be the second oldest section of the house, contains the staircase to the bedrooms above. There is a long one-story porch on the south side of this part of the house. Walls here are 30" thick.

The 1850 wing ^{stone masonry} is 2 stories over a high lighted basement that has another large fireplace. Chimneys are at either ends of the house.

STATEMENT OF SIGNIFICANCE (Include Personages, Dates, Events, Etc.)

Probably the oldest house still in use in Harford County, built by a member of the Webster or Paca family, at the junction of three tracts, Webster's Forest, Webster's Enlargement and Paca's Enlargement. The east wing, under the gambrel roof, contains the oldest part, said to have contained just two rooms. The west part, stone, three stories, was added about 1850.

HA 422 Webster's Forest

This early home was constructed in three sections. The earliest part, under a wide gambrel roof, probably dates from the early 18th century (possibly late 17th century). The western part has a shallow "A" roof. The ridgelines run east-west.

The east section, two bays by two, is a story and a half with two flat dormers on each side and is built of stone, stuccoed. The east two rooms have corner fireplaces. Walls of this section are 30" thick. A full and useable basement, unlighted, has two rooms, each with a large corner chimney for cooking, with a timber lintel about 18" square by 10'. On the main floor a hall runs through the house, north-south, at the west side of this earliest part of the house. The hall area, believed to be the second oldest section of the house, contains the staircase to the bedrooms above. There is a long, one-story porch on the south side of this part of the house.

The 1850 west wing is of stone masonry and is two stories high. It has a lighted basement that also has a large fireplace. There are chimneys at either end of the house.

Probably the oldest house still in use in Harford County,¹ it was built by a member of the Webster or Paca family at the junction of three tracts, Webster's Forest, Webster's Enlargement and Paca's Enlargement. The east wing, under the gambrel roof, is the oldest part and contained just two rooms on the main floor; a hall with staircase was the second part to be built. The west part, also of stone, is three stories and was added about 1850.

1. Wright, Our Harford Heritage

typical log house was about 16 x 24 feet, with a huge chimney of stone at one end for the massive fireplace which served for heating and cooking. The writer remembers as a boy several of these log houses and especially the huge structure in which he was born, built by his great-grandfather before the Revolution.

Building a house of logs required initiative, but it was the easiest and most convenient way of erecting a durable dwelling. The method of construction was simple. With skilled strokes of the ax, the builder cut a notch or "saddle" near each end of the log. The companion log had a notch of the same depth and the two, when put together, formed a wide right angle. About fifty to one hundred logs sufficed for the four walls. To plug the opening between the logs, the builder sometimes used lengths of wood, split in triangular shape, and sealed the crevices on each side with puddled clay or mason's mortar made of burned lime or sand. The framework was often held together with wooden pegs. The description of the log house would not be complete were mention not made of its roof. The forest again came into use when the rafters were hewn from long tree branches; and rude shingles, one-half inch thick, were "rived" or shaved from blocks 2 feet long. The shingles, after being smoothed with a drawknife, were nailed with homemade, hammered nails. The farmer made these shingles at odd times, using the simplest tools—a shaving horse for clamping the shingle in place, a wooden mallet for driving the splitting blade, and a good drawknife.

Log houses were far more than temporary structures and many endured for generations. Some of the finest of our early houses, remodeled and added to, have been in use far into the twentieth century.

By the middle 1700's some of the large landholders were erecting more elegant homes. These usually had a long, wide hall, which ran through the house from front to back and served also as a living room. The large kitchen had its huge fireplace, and the spacious parlors were carpeted with animal furs or carpets brought from England. They were furnished with sofas, chairs, desks, and tables made by the best cabinetmakers. Many of these homes had beautiful old stairways with two sets of stairs to the landing and bannister rails of walnut or birch. Sometimes an out-kitchen was built separate with a covered passageway to the main house, and slaves and other servants prepared food there and carried it to the main dining room. But even the richest settler had no furnace, no gas, no electricity, and had to rely on the fireplace for heat, and candles or whale oil for light.

Probably the oldest house still standing in Harford County is Webster's Forest. This structure, with walls 30 inches thick, was built in 1696 either by a Webster or a Paca. It was erected near the junction of "Webster's Forest," "Webster's Enlargement," and "Paca's Enlargement,"

HA-442

WEBSTER'S FOREST

Erected about 1696. Probably oldest house still in use in Harford.
Now owned by John F. Joesting.

and originally contained only two rooms. A hall was added later and a west wing was constructed in 1850. In 1763 Webster's Forest was bequeathed by John Webster to his son, Samuel Webster. The last of the Webster family to live on this estate was William Webster who died in 1914. We are indebted to Mrs. Nancy Webster Barnes for this information.

A few other typical early homes in Harford are the following: Rigbie House, built by Nathan Rigbie in 1731; Prospect, later Olney, built by John Norris in 1758; Sophia's Dairy, built by Aquila Hall in 1768; Christopher's Camp, built by R. Morgan in 1771; Homestead, built by William Wilson in 1774; Poplar Grove, built by Dr. Phillip Henderson in 1787; Medical Hall, built by Dr. John Archer in 1800; The Vineyard, built by Bernard Preston in 1804; Olney, built by John Saurin Norris in 1810; and Woodside, built by Dr. Joshua Wilson in 1823.

Cooking

In the first American homes, one room served as kitchen, dining room and living room. The fireplace opening was immense, 8 or 9 feet long and 5 feet high. From one side to the other, a rod or lug pole was placed to
