

PRINCE GEORGE'S COUNTY  
HISTORIC SITE SUMMARY SHEET

Survey #: P.G. #70-43 Building Date: 1928

Building Name: Robert Cook House

Location: 9206 Crandall Road, Lanham, Maryland

Private/Residence/Occupied/Good/Inaccessible

Description

The Robert Cook House is a one-and-one-half-story gable-roof dwelling constructed of rammed (tamped) earth. It is roughly square, four-by-four-bays, and has a one-story wing to the east. The walls of the house are 18 inches thick, made of earth which was tamped into forms and then coated with linseed oil. Above the first story, in the gable ends, the walls are coated with buff-colored stucco; the first story walls are a natural salmon pink color and are uncoated. Entrance is in the second bay of the east facade, through a panelled wooden door. The southwest quadrant of the house was originally a screened porch, divided and supported by tall piers of local iron-bearing stone. This screen porch is now glass-enclosed on each facade. The gable roof has overhanging eaves with exposed rafter ends. Two shed dormers pierce the west plane of the roof; they are covered with rectangular lapped shingle and their eaves are punctuated by exposed rafter ends. A third and narrower shed dormer pierces the east plane of the roof. The east facade of the house is highlighted by a cross gable which surmounts the main entrance and the one-story east wing. The one-story wing extends east from the main block, flush with the north gable end. It is gable-roofed, and is two-by-two-bays. There is an entrance in the second bay of its south facade. A rear door in the second bay of the north facade of the wing is sheltered by a one-story shed-roof entry porch.

Significance

The Robert Cook House is a unique example of a tamped-earth (pise) building. It was constructed 1924-1928 by Robert Cook on land which he received from his father's home place. It is one of very few such buildings known in the Washington area. Robert Cook was the son of Orator F. Cook, a botanist with the U.S.D.A., who in 1901 purchased the Crandell farm in Lanham, and built a large frame dwelling. Several other research scientists purchased adjoining land, and, within a few years, the Cook house had become the nucleus of a small suburban scientific community. In the early 1920's, after his marriage, Robert Cook (who became prominent in the field of genetics) acquired 12 acres of his parents' Lanham property, and set out to build a tamped-earth house, following the example of a few other Department of Agriculture scientists. He built the wooden forms himself, and hired a crew of six unskilled labors and one foreman, who worked together with him from 1924 to 1928 on the construction of the house. Building material was excavated from a portion of the 12-acre property just north of Crandell Road and the excavation itself became the basement of the house. Robert Cook lived in this house until the 1940's, and members of his family occupied it until the 1970's.

Acreege: 10.8 acres

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The Robert Cook House is a one-and-one-half-story gable-roof dwelling constructed of rammed (tamped) earth. It is roughly square, four-bays-by-four-bays, and has a one-story wing to the east. The house is situated on wooded grounds on the north side of Crandell Road in Lanham.

The walls of the house are 18 inches thick, made of earth which was tamped into forms and then coated with linseed oil. Above the first story, in the gable ends the walls are coated with buff-colored stucco; the first story walls are a natural salmon pink color, and are uncoated. The house faces south, and entrance is in the second bay of the east facade, through a panelled wooden door. Most windows have been replaced. Original windows consisted of three tall vertical sashes, which opened accordion-style; they have been replaced on north, west and south by modern picture windows, or by two-sash vertical sliding windows at upper level in the gable ends. First story windows have decorative sills composed of small chunks of stone-embedded mortar. Basement windows have log lintels.

The southwest quadrant of the house was originally a screened porch, divided and supported by tall piers of local iron-bearing stone. This screen porch is now glass-enclosed on each facade by three banks of five narrow horizontal windows.

The gable roof is covered with brown asphalt shingle. It has overhanging eaves with exposed rafter ends. The cornice is a plain board painted dark brown. Two shed dormers pierce the west plane of the roof; they are covered with rectangular lapped shingle and their eaves are punctuated by exposed rafter ends. Each dormer encloses a central sash, flanked by two vertical sliding sashes. A third and narrower shed dormer pierces the east plane of the roof; it encloses a two-sash vertical window.

There is a dirt basement under the main block. The east facade of the house is highlighted by a cross gable which surmounts the main entrance and the one-story east wing. Rising just north of the ridge of this cross gable is a long slim chimney constructed of local sandstone.

The one-story wing extends east from the main block, flush with the north gable end. It is gable-roofed, and is two-bays-by-two-bays. There is an entrance in the second bay of its south facade, its jambs marked by columns of sandstone. There is a rear door in the second bay of the north facade of the wing; it is sheltered by a one-story shed-roof entry porch with a high concrete floor. Concrete steps descend northward from the porch, and then divide to continue the downward flight both to east and west.

Description (continued)

Section 7 Page 2

---

The approach to the house is by an unpaved lane which curves northward from Crandell Road and circles to the east of the house. Stone steps descend from the circle to the principal doorway. The wooded grounds are dotted with pines and dogwoods. To the west of the house is a pond created by the excavation of the building material. A fenced barnyard slopes northward from the house.
