

Addendum to Maryland Historical Trust Maryland Inventory of Historic Properties Form

Inventory No. M: 36-13

Page 1 of 1

Name of Property: Tastee Diner

Location: 8516 Georgia Avenue, Silver Spring, Montgomery County

When last documented in August of 1994, the building that stood on this site was the Silver Spring Tastee Diner. As described and recorded on a Maryland Historical Trust State Historic Sites Inventory Form, the diner was transported and assembled on-site (corner of Georgia and Wayne Avenues) in 1946 by Jerry O'Mahoney, Diner Company of Elizabeth, New Jersey. It was considered a classic example of commercial Art Deco/ Moderne architecture. The building was a one-story, two-cell construction with building materials that included formica, stainless steel, porcelain enamel panels and streamlined ribbon windows (Bushong 1994).

No formal Determination of Eligibility and/or listing(s), Local, State or National, has been made, documented and/ or located for this resource.

The demolition and/or move of a building to/from a property is considered part of a property's history and should therefore be documented when such activity occurs. This form documents that the above-noted building has been moved. On June 17, 2000, the original railcar portion of the diner was moved to a new location, the southeast corner of Cameron Street and Ramsey Avenue. The move was prompted by the purchase of the property on which the diner stood to Discovery Communications (owner of the Discovery Channel) as the site for the construction of their new headquarters building, built circa 2003. As locally understood, the Tastee Diner's owners had been leasing the land since the buildings construction, but did not actually own the property (Anonymous 2004).

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The Silver Spring Tastee Diner, transported and assembled on its site at the corner of Georgia and Wayne Avenues in 1946, is a classic example of commercial Art Deco/Moderne machine age architecture. The factory built restaurant constructed by Jerry O'Mahoney, Inc. of Elizabeth, New Jersey is a two-cell, one-story diner. The materials used to build the diner, particularly the formica and stainless steel, contribute to an intended machine-age imagery of modernity and cleanliness. The exterior surface of flat porcelain enamel has rounded corners trimmed with wraparound bands of stainless steel and has a streamlined ribbon window on the main facade. Originally flood-lit at night and crowned by a color neon "Tastee Diners" sign, the structure is a rare and remarkably intact example of early post-World War II commercial architecture.

The Tastee Diner's historic core was shipped in two parts by flatbed truck and attached together on the site in August 1946. This method, known as "split construction," was first developed by Paramount Diners in 1941. The diner was completely constructed at the O'Mahoney factory in Elizabeth, New Jersey with all exterior and interior design features and equipment installed before shipment to the site. The building originally comprised a two-part prefabricated main section that contains the restaurant, grill and kitchen area and had rear built-on-site office, storage room and a screened-in garbage disposal shed. In recent years a utilitarian cinderblock addition was built to extend the restaurant seating capacity (north). The diner's overall exterior design is symmetrical with a dramatic stainless steel central entry with a stainless steel canopy. The exterior walls were cream colored porcelain (now painted beige) trimmed with red porcelain strips.

A band of large windows trimmed in stainless steel contributes to the streamlined visual front that was common to modern sales structures in this period. The corners of the diner are rounded and the glass in one corner window has been set in beveled panes. It has a metal monitor roof that is painted silver and a flat asphalt roof covers the cinderblock additions. The rounded roof relates to the design of a rail car, but has a prominent exterior parapet to allow a

Prepare both a summary paragraph of significance and a general statement of history and support.

Summary:

Silver Spring's Tastee Diner is exceptionally significant as an extremely rare building type and a classic example of Art Deco/Moderne commercial architecture. Today few factory built diners survive with integrity because of the intense competition within the restaurant industry and fast-changing pace of roadside architecture. There are only a dozen diners known to be extant in the state of Maryland that predate 1960.¹ Although it is a relatively young resource, the diner has received scholarly evaluation as a building type and the Silver Spring Tastee Diner has been featured in **Washington Deco** documenting its historic architectural design.²

Historic Development of the Diner as a Building Type

The history of the diner may be traced to a night in Providence, Rhode Island in 1872 when Walter Scott rolled out and parked a horse drawn wagon in Westminster Street to sell sandwiches, boiled eggs, pie and coffee to the **Providence Journal's** night shift workers. His idea of a "night lunch wagon" caught on rapidly and by the late 1880s Samuel Jones in Worcester, Massachusetts had started manufacturing wagons large enough for customers to eat inside. Soon competitors such as Charles Palmer and Thomas H. Buckley opened rival manufacturing plants and improved on the lunch wagon designs. By the early twentieth century, brightly painted four-wheeled lunch wagons with several windows and a central door, resembling a cross between a omnibus and a circus wagon, were a common sight in northeastern American cities.³

higher interior ceiling. Originally a row of neon lights illuminated the roof at night and was crowned by a neon sign, TASTEE DINERS. This lighting and signage have been removed and today the decorative roof is partially covered by modern ductwork. The diner's dramatic streamlined exterior design has been further downplayed by the addition of a stripped brown canvas canopy and by painting the cream porcelain panels and arrow-like red trim in beige and brown.

The diner's overall streamlined styling is continued on the interior. The basic layout of the dining section is symmetrical and employs a long counter with stools running the length of the diner with food preparation behind. This counter has a central opening with double door access to the kitchen to the rear. The backbar is offset by stainless steel formed by factory sheet metal workers which features a large panel molded into a sunburst pattern. There are seven booths along the outside wall and eighteen stools around the counter. The patterns and materials of the interior surfaces are elaborate and maintain a predominate color scheme of salmon, wood-grain, and marbled white. The ceiling has concave salmon and marbled white formica panels held in place by stainless steel and formica strips. The floors are earth-toned terrazzo and the wall panels, main counter and booth tables are woodgrain formica with white marbled formica tops. Stools and booth seats were finished in burgundy naugahyde in keeping with the primary salmon color scheme, but have been replaced over the years with brown naugahyde. Restrooms are placed behind a stainless steel and glass door on the south side of the restaurant.

The kitchen is entered through the counter opening and central double doors that provide the main circulation connection between the kitchen and dining areas. The kitchen equipment has been replaced as it has worn out, but the original formica ceiling and wall panels are intact and some of the stainless steel fixtures and counters are in place. There is an office, storage room and garbage disposal shed built on to the diner's prefabricated sections.

Page 8.1

Business became so good that owners found they no longer needed to roam the city for customers, but could lease land and site a lunch wagon at a choice location. Lunch-car manufacturing boomed in the early twentieth century and soon firms such as Tierney (1903), Worcester Lunch Car (1906), and Jerry O'Mahoney (1913) mass produced semi-permanent lunch cars patterned after their barrel-roofed horse-car ancestors. However, by the 1920s these manufacturers began to develop a whole new generation of semi-permanent restaurants with designs reminiscent of Pullman-car architecture. By the 1930s the dining-car or "diner" as they came to be called was a fixture on the American urban landscape. Eating at the diner was cheap and the low overhead not only helped the operators to survive the Depression but to prosper. By the outbreak of World War II, the portable working-man's lunch wagon had made the dramatic transition into a prefabricated restaurant with broad customer appeal.⁴

As the diner gained a reputation as a safe, cheap place to eat in the 1920s, their looks began to change. The mass production of an affordable automobile during this period had an important influence on the diner's design. Roadside commercial buildings, most often viewed from behind the wheel of the car, were inevitable candidates for streamlining as industrial designers created a streamlined design aesthetic that swept the nation in the 1930s. Diners were industrial buildings that always made use of the "products of the future" as soon as they were available. The interiors were machines for cooking and serving food with stainless steel and formica laminate surfaces that were shiny and easy to clean, a prerequisite for the diner business. By the end of the decade, factory craftsmen, inspired by machine age iconography had created a classic diner building type characterized by its sleek shape and stainless steel and bright porcelain enamel materials all set off by colorful, glowing neon.⁵

The "golden age" of the diner came to an end in the late 1950s as drive-in chains became more popular and the emerging fast food restaurants burgeoned. Most of the diners that survived into the 1970s were remodeled and new diners were built as modular prefabri-

cated buildings that bore little resemblance to their dining car ancestors. In the last decade there has been a resurgence of public interest in the classic diner of the 1930s and 1940s. New diners based on historic streamlined designs have been built and the original models have been preserved and rehabilitated. In the early 1980s the Modern Diner in Pawtucket, Rhode Island (1941) became the first diner to be listed in the National Register of Historic Places. Within the Washington metropolitan region, the Tastee 29 Diner in Fairfax, Virginia (1947) was listed in the National Register in 1992.⁶

Tastee Diners

The Tastee Diner in Silver Spring was one of a chain of diners operated in Maryland by regionally famous dinerman Eddie Warner. His rise from dishwasher to the owner of a chain of diners was a Horatio Alger story duly recorded for the readers of the trade publication **Diner** in 1947. Warner operated the three original Tastee diners in Maryland at Rockville (1932; moved from Silver Spring site), Bethesda (1939), Silver Spring (1946) and added a Laurel location in 1951. He managed the chain until his retirement in 1968. Robert Traynor, the manager of the Silver Spring Tastee diner under Warner, leased and operated the restaurant until 1988. Gene Wilkes later acquired the Maryland Tastee diners and for a time was in partnership with Leonard Milliken, the owner of the 29 Diner in Fairfax accounting for its current name as the "Tastee 29 Diner." Today there are three Tastee Diners extant in Montgomery and Prince George's Counties operating at Silver Spring, Bethesda (1939 O'Mahoney that has been extensively altered), and Laurel (1951 model from Comac, Inc. that retains its design features).⁷

The Silver Spring Tastee Diner was manufactured by Jerry O'Mahoney, Inc. in 1946. The company began manufacturing lunch cars in 1913 and after several moves established a plant at Elizabeth, New Jersey where it manufactured diners until 1956. O'Mahoney, with his partner, John J. Hanf was one of the most successful diner manufacturers in the business producing hundreds of models over the years in

a variety of styles. The O'Mahoney company had a major impact on the industry both as builders and skilled promoters. They launched their own magazine, **Dining Car News**, in 1927 and distributed the publication free of charge to owners and prospective buyers of their cars. Although it contained articles of general interest to dinermen, the real intent of the periodical was advertisement and promotion of O'Mahoney.⁸

The Tastee Diner in Silver Spring was a new model introduced by the O'Mahoney company in 1946 that featured enlarged windows, curved glass corners and taller trim above the windows. All of these features de-emphasized the railroad style monitor roof that had been a dominant design element for more than twenty five years. This new model, with standard air conditioning and radiant heat, created a new image sheathed in cream colored porcelain enamel with two horizontal porcelain stripes, usually turquoise or red, that met at the door in the form of an arrow. Interior color schemes were also changed to a pastel palette rather than the primary colors of past years.⁹

Art Deco/Moderne Commercial Architecture

The Silver Spring Tastee diner was erected on a crossroads site that was consciously selected to become a magnet for restaurant patrons. The county's population surged after 1930 growing from 49,206 to 83,912 by 1940 as the automobile and the expansion of the federal government during the New Deal era provided the transport and employment for thousands of new workers to settle in the area. In April 1946 the **Evening Star** (Washington) reported that the first quarter building permits reflected a "postwar building revival in the eastern suburban area of Montgomery County" that in terms of volume and cost smashed all previous records.¹⁰

By 1947 downtown Silver Spring had developed into the largest regional retail and business center in Montgomery County. The Art Deco Silver Theater and Shopping Center complex, clustered at the

(Continued)

Continuation Sheet
M: 36-13 - Tastee Diner
Section 8: SIGNIFICANCE
Page 8.4

intersection of Georgia Avenue and Colesville Road, began the building boom that revolutionized the architectural image of Silver Spring. Art Deco/Moderne style buildings rose up along Georgia Avenue and Colesville to create a thoroughly modern "downtown" business community. The Tastee Diner, located just a block from the Silver Spring Shopping Center, well-expressed this new commercial aesthetic and was sited to take full advantage of the town's booming population and crowds of weekend shoppers who drove into town from the surrounding region.

Today the Tastee Diners in Silver Spring and Fairfax are considered the "most noteworthy Washington diners among the unremodeled specimens." Unfortunately, the 1939 Bethesda Tastee Diner has been heavily altered and has lost its architectural integrity. Wirz and Striner, in their study of the Washington metropolitan region's Art Deco/Moderne architectural heritage, consider Silver Spring's Tastee Diner to be "a splendid representation of vernacular design and streamline aesthetics . . ." and a "perfect representative of this machine expressive style."¹¹ Within the local historical context, the Tastee Diner is exceptionally significant because it is Montgomery County's best illustration of the diner building type and an outstanding example of early post World War II streamlined commercial architecture.

1946

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

Transported and assembled on site in 1946, the Silver Spring Tastee Diner epitomizes the 20th century American Diner. Although impacted somewhat by later, heavier additions which tend to lessen the illusion of impeding movement, enough of the original "railroad car" lines show through to make this a good surviving example of the once ubiquitous roadside diner.

Diners are now widely recognized as classic examples of vernacular commercial architecture. The Silver Spring Tastee Diner, assembled in two segments on location in 1946, is featured in the book American Diner by Richard Gutman and Elliott Kaufman (New York, 1979). The diner, unlike the silvery aluminum or stainless steel examples to be found in other suburban areas of Washington, features surfaces of porcelain enamel with wrap-around turquoise trim on a cream-colored background. As Wirz and Striner have said in Washington Deco, the Silver Spring Tastee Diner "represents the aesthetics of the 1930's unaltered in any way. From the onset of the diner craze in the late 1920's — when hard edged Pullman cars and trolleys were adapted to use as restaurants — diners evolved into the sleek confections of porcelain enamel, stainless steel, and glass block that would dazzle roadside America throughout the 30's and 40's. The Silver Spring Tastee is a perfect representative of this machine-expressive style."
