Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The log house is a one and three-quarters story structure covered in aluminum siding. The one and three-quarters height as well as the centrally located brick chimney make this structure different from many in Sandy Hook. It has a four bay main facade with entrances located in the outer bays. Fenestration of the three-quarters story includes two closely arranged windows on each side of the facade. Window sash is modern. The structure has a gable roof. The date of construction is mid-19th century.

The property is located on the north side of Sandy Hook Road, approximately .05 mile west of Clark Road, in Sandy Hook. The house sits on a slight rise from the road level. The main facade faces south.

The one and three-quarters story structure is constructed of log covered in a modern aluminum siding on a fieldstone foundation. The main facade is asymmetrically arranged. It has an entrance in the easternmost bay. Two-over-two sash windows are in the other bays of the first story. The second story has modern aluminum sash windows grouped two to a side. The structure has a full-length, one-story front porch on square posts with a slat railing. The gable ends have a single window on each story and a small window to light the gable. The roof has a boxed cornice and is covered in sheet metal. The brick chimney rises from a central location at the peak of the roof.
