CARR-1555
2011 Snydersburg Rd., Hampstead Vicinity

Summary:

The Sharrer-Hosfeld Farm was a 33 acre tract in Baltimore County that was owned by John Lentz of Frederick County. When Lentz sold it to Henry Gross in 1835, Lentz was obviously not residing on the farm, if it was indeed improved. At best it was a small tenant farm, and sold for only $302.50, or just over $9 an acre. Though the deed was dated 1835, the sale must have occurred at least several years earlier as Gross was assessed for this land in 1833. At that time the land was worth $210 and the improvements $150. This suggests that the original log house may have been standing at the time. The house has undergone numerous changes, but several features argue for an early date of construction. One is the lack of a false plate in the roof framing. The few buildings where rafters were set in notches tend to be eighteenth- or perhaps very early nineteenth-century structures. The retention of exposed logs on the interior is also typically an indicator of relatively early construction and finish, though this is a less reliable diagnostic tool, since it is more often driven by economics.

The Sharrer-Hosfeld Farm was located at 2011 Snydersburg Road, approximately 3 ¾ miles west of Hampstead, in northeastern Carroll County, Maryland. The farm complex consisted of a log house, a frame barn, a frame summer kitchen, frame smokehouse, two sheds, a hog pen, two poultry houses, and a wagon shed. The farm complex sat in a natural bowl with hills rising to the north, east, and south of the house and barn. The ground drops off to the west toward a tree-lined stream. All of the buildings were scheduled to be destroyed by the fire department in a controlled burn shortly after the field visits. None of the buildings survive.

The house is a two-story, three-bay by one-bay structure that faces south toward the uphill side of a slope. It has a gable roof with an east-west ridge that is covered in standing seam metal, and is set on a low rubble stone foundation wall. There is a brick chimney set just east of center. On the south elevation the first story has rough casting with corner boards and a base board. The rough casting is whitewashed. The west bay has a beaded-edge vertical board door with a four-light sash and later hardware. The center bay has a nine-light-over-two-panel door and a three-light transom. The east bay has a 2/2 sash. The rough casting is laid over sawn vertical lath fastened with cut nails. The log structure beneath has weathered v-notch corner logs that are whitewashed. The two bays to the east are the original section of the house and the west bay has been added. There is a corner post just west of the center bay that butts up against the v-notches of the original section. This post has a continuous mortise on its west face and the logs are tenoned into the post but are not pegged. The posts and the logs to the west of it have several coats of whitewash on them as well. The vertical lath is circular sawn and is fastened with cut nails. It supports the rough casting, which is painted white, then an olive green, and then white. There is a one-story, three-bay porch with a shed roof. The porch deck is set on three sleepers set on the ground. The sleepers are hewn on one side. There were originally six chamfered posts, but several of the posts are now missing. The porch plate is hewn and supports primarily ¾ round log rafters. The second story has weather boards with an ogee moulding on the bottom edge. There are three 2/2 sash, and there is a wood box cornice with returns.

The west elevation also has weather boarding like that on the south elevation, and it is wire-nailed to vertical nailers. The logs and chinking beneath do not appear to be whitewashed or painted. The first story has a 2/2 sash and the second story has a 2/3 sash. The gable end has a six-light sash. There is a porch on the north, and the west end is enclosed and has a 6/3 sash.

The north elevation has a one-story, three-bay porch with a shed roof. The east and west bays of the porch are enclosed with board and batten siding, and there are two chamfered posts between these enclosures. The eastern enclosure has a vertical board door on the west elevation. The porch, deck and soffit are all fastened with wire nails. The east bay of the porch enclosure has a 2/2 sash. The center bay has rough casting and a nine-light-over-two-panel door with a three-light transom above. The west enclosure has a 6/3 sash and a bulkhead to the cellar with bulkhead doors covering stone cheek walls. The second story has board and batten siding and

three 2/2 sash. There is a wood box cornice with returns.

The east elevation has German siding with cut nails. There is a 2/2 sash on both the first and second stories, set just north of center. The gable end has a 4/2 sash. The porch on the north is enclosed with German siding that is laid separately from the rest of the east elevation siding. There is a six-light sash in this porch enclosure. The siding here is fastened with wire nails.

There is a cellar under the addition only. The log joists here run east-west and are re-used logs with v-notch corners. The cellar walls are plastered and whitewashed.

The original log section to the east has two rooms, one to the east and one to the west. The west addition is a single room, with a room to the north of it where the north porch has been enclosed. The west room has double-beaded-edge vertical board half wainscot on the east and west elevations. There is an enclosed winder stair in the southwest corner that has two steps below a short beaded-edge vertical board door. The stairs are enclosed by a beaded-edge vertical board wall and have a matching door on the north side of the enclosure that leads to a closet beneath the stairs. There is 2 ½ inch wide flooring that runs north-south and is primarily covered by linoleum. On the east wall, to the north, is a beaded-edge vertical-board door with tapered battens that leads to the center room. The north wall has vertical boards that appear to be added later, as the northern log wall appears to have been cut out and the ends boxed in before the vertical board wall was added. There is a beaded-edge vertical-board door set in this wall that leads to the northwest room. The northwest room has linoleum on the floor. The ceiling is of pressed metal with a lozenge pattern, and has egg and dart moulding at the cornice.

The center room is set one step down from the west room. The flooring here runs east-west and is of random width, between 9 and 11 inches wide. There is a door on the north elevation to the exterior porch. The east elevation has a beaded-edge vertical-board door set to the north. There is a fireplace centered on this wall that has a wood mantel with plain pilasters and a frieze with a Tudor arch. The mantel also has a pair of board doors. The hearth is gone, but was much wider than the mantel. The firebox is not a true fireplace but has two brick piers at the front that make the front opening narrower than the back. These piers contain wood nailing blocks to fasten the mantelpiece to. There is also a narrow wood lintel to this opening and a wood board across the bottom of the opening. Much of the wood is charred. The brick piers are not added, but are integral with the rest of the brickwork of this chimney and must have been constructed for a stove, with the doors inside the mantel serving as a clean-out. There is a winder stair in the southeast corner that has one step set below a beaded-edge vertical-board door. The inner side of the door, the stringer, and the risers and treads all have a combed, grained finish. The door has squiggles in it after the combing was done. There is a hewn beam running east-west, just south of the center, on the ceiling.

The east room has a mantel shelf on the west wall with no fireplace. The bed mould of the mantel is a piece of German siding. The woodwork in this room all has combed, grained finishes. The stairway in the center room is built out into the southwest corner of this room, and the beam in the center room runs across this ceiling as well. The east wall has riven lath fastened with cut nails. The logs beneath this lath are whitewashed. The front and rear sash have spring latches. The second story has the same floor plan as the first story. All of the rooms are unheated, and do not retain significant details.

The attic is unfloored and there are no stairs leading to it, but simply an opening in the ceiling. The attic joists in the east half of the house are hewn on top and bottom, run north-south, and are 8 to 10 inches wide. The ceiling lath beneath them is riven, and slab wood is set between each pair of joists to which the ceiling lath is nailed. The rafters are hewn on all four sides and are 3 ¼ to 4 inches square. They have a center tenon and peg at the ridge, and support circular sawn sheathing boards. The rafter feet are notched into the top logs, so there is no false plate used here. The attic on the west addition has joists that are hewn on top and bottom and run east-west. On the east side (the original log wall), the top log has been notched to take tenons on the ends of the joists. On the west end the joists simply rest on top of the log wall. The rafters are ¾ round logs, most of which are mitered at the ridge, and several may be pegged. The top log on both the north and south sides is hewn on all four sides and is notched to take the rafter feet. Again, there is no false plate used here.

The summer kitchen is set about 12 feet south of the west end of the house. It is banked into the hill at the south and is a one-story, two-bay by two-bay structure that has a rubble stone foundation, German siding with corner boards (all fastened with cut nails), and a gable roof of standing seam metal with a north-south ridge. There is an interior brick chimney centered on the south end of the gable. The south elevation has a four panel door in the west bay. The west elevation foundation has a 6/3 sash in the north bay of the foundation. The first story has a 2/2 sash in the center, and there is a wood box cornice. The north elevation has a beaded edge-and-center vertical board door on machine cut strap hinges in the center of the foundation. The first story has two 2/2 sash and the gable end has a four-light sash. The east elevation has a 6/3 sash in the north bay of the foundation. The first story has a four panel door, like that found on the south elevation, in the south bay, and the north bay has a 2/2 sash. There is also a central gabled wall dormer with no opening, and a wood box cornice.

The lower story of the summer kitchen has a brick cooking fireplace on the south end. The fireplace has straight plastered jambs and a stone wall to the rear. It has a metal lintel and a crane that is bolted together, not welded. There are circular-sawn joists running east-west that are 2 by 8 inches. The walls are plastered and whitewashed. The upper story has beaded-edge-and-center half wainscot, and plaster above it on circular sawn lath fastened with wire nails. The flooring is 3 1/4 inches wide and runs north-south. There is a chimney with a stove pipe hole on the south

elevation. To the east of this chimney is a built-in cupboard of the same material as the wainscot. The bottom section has two doors with a shelf, then there is an open space above and two doors above it, with four shelves behind these doors. To the west of the chimney is a hatch leading to the attic area, which is unfloored.

There is a smoke house located about four feet west of the summer kitchen. It has a rubble stone foundation and sash-sawn board and batten siding that is wire-nailed. There is a gable roof of inverted-v-seam metal with a north-south ridge, and a wood box cornice. There are no openings on the south or west elevations. The north elevation foundation has an opening to the fire pit that has brick jambs. The east elevation has a board and vertical batten door set to the south, and it is hung on butterfly hinges. The smokehouse has a hewn sill, hewn plate, and hewn corner posts. The end girts are sawn and are half-lapped. Horizontal beams in the center of the walls and down braces are of round logs and are nailed. The rafters are sawn 2 by 4's that are mitered at the ridge.

About 45 feet southeast of the house is a small shed with a rubble stone foundation, vertical board siding with cut nails and with battens on the north elevation only, and a gable roof with a north-south ridge and standing seam metal. There are no openings on the west, south or north elevations. The east elevation has a wide door opening set to the south.

About 15 feet east of the small shed is a large shed with a rubble stone foundation, vertical board siding with cut nails, and a gable roof with inverted- v-seam metal on the west and corrugated metal on the east. The ridge runs north-south. The south elevation has paired vertical-board wagon doors on machine cut strap hinges. A wing added to the east has paired, beaded-edge vertical board doors on t-hinges. The west elevation has a vertical board door on machine made strap hinges, set to the south. There are no openings on the north or east elevations. The east elevation has beaded-edge-and-center vertical board siding on the added wing. The shed has the same construction as the smokehouse, and the framing is fastened with cut nails.

There is a hog pen located about 20 feet east of the large shed and east of the drive. It has a rubble stone foundation and beaded-edge-and-center vertical board siding fastened with wire nails. The gable roof has a north-south ridge and inverted-v-seam metal. The structure is a three-bay by one-bay, one-story building. The south elevation has a small vertical-board door set high on the wall and a six-light sash on the gable end. The west elevation has two window openings with small doors set above them, and a door hung on machine cut strap hinges set to the south. The north elevation has a six-light sash in the gable end. The east elevation has a concrete wall at the foundation. Much of the bottom half of the siding is now gone, but there appears to have been three openings for hogs to enter and exit. The hog pen is constructed of a circular sawn, mortised and tenoned and pegged, heavy timber frame. There is a low concrete wall that runs

north-south and is set just west of center. On top of it are wood posts and horizontal board walls. There are circular-sawn joists that are approximately 2 by 6's running east-west. There is a two-run ell stair at the northwest corner that leads to the upper story. It is constructed with wire nails. The rafters are circular sawn 2 by 4's that are mitered at the ridge.

There is a bank barn with a south-facing forebay located about 50 feet north of the hog pen. It has a rubble stone lower story with some brick at the southeast and southwest corners. The south elevation of the lower story has horizontal boards that are sash sawn and fastened with cut nails. The upper story has vertical board siding with wire nails, and the gable roof has an east-west ridge with standing seam metal. On the south elevation the lower story has, from west to east, five vertical board Dutch doors on machine cut strap hinges. A stone and brick wall closes off the forebay on the east end, and there is also a stone barn yard wall on the east side that appears to be integral. The upper story has five wood louver vents. There were probably originally six, but the east one, and some siding in that vicinity, is now gone. In the center are a pair of doors set above a pair of doors, all of them hung on machine cut strap hinges.

The west elevation has a typical Dutch door in the center of the lower story. There is a vertical board door on rollers beneath the forebay. The upper story has a vertical board door on machine cut strap hinges set to the north and three vents, with two vents above this. The gable end has a 4/4 sash with a narrow vent on each side. This opening is pedimented and the tympanum is painted "BUILT 1885." On the north elevation, the bridge or ramp extends across the whole length of the barn. The upper story has a pair of wagon doors on rollers in the center that are made of beaded-edge-and-center vertical boards. There are two four-light sash set west of the doors. The east elevation is banked on the lower story and the wall is partially collapsed. The upper story apparently had two vents and the gable end was the same as that on the west, but these are all now gone.

In the lower story the joists are reused v-notch corner logs that run from the bank on the north to the summer beam, and from the summer beam to the forebay on the south. The summer beam runs east-west and is hewn on all four sides. It is supported by five posts, at least two of which are later. The west end has a hewn lintel with pegs in it, and there is a box set in the west wall. There is a horse stall on the west end with a trough and wood boxes below it on the east end of the stall. The rest of the stalls are altered. The upper story has four mortised and tenoned and pegged hewn bents. There is a center threshing floor with a hay mow at each end and a granary in the northwest corner. The rafters are both sawn and ¾ round, and they appear to be mitered at the ridge. They support lath and wood shingles. There are center posts beneath the purlins in each hay mow.

Attached to the southwest corner of the barn is a pump house with a concrete foundation, German siding on the north elevation, and beaded-edge-and-center vertical board siding on the

west, south and east elevations. All of the siding is wire nailed. There is a gable roof with a north-south ridge and inverted-v-seam metal roofing. The south elevation has a one-light sash, the west elevation has a four-light sash, and there are no openings on the north elevation. The east elevation has a beaded-edge-and-center vertical board door set to the north. The building is of circular sawn 2 by 4 construction and contains a pump with gearing, belts, and skids, probably for a motor set to the south of the pump.

There is a small poultry house about 75 feet southeast of the barn. It appears to be built on skids that project beyond the walls on the south and the north, with a hole drilled through the skids. The building is now set on loose CMU's resting on the ground. It has beaded-edge-and-center vertical board siding that is wire-nailed. The shed roof slopes to the south and has asphalt roll roofing. The south elevation has two large three-light sash set above two more large three-light sash. The west and north elevations have no openings. The east elevation has a door to the south of beaded-edge-and-center vertical boards. The building is of 2 by 4 construction. About 40 feet northeast of the house is a large poultry house of beaded-edge-and-center vertical board siding with cut nails. It is set on both CMU's and cast concrete posts, and has a shed roof that slopes to the north and is covered with inverted-v-seam metal. The south elevation has a door to the west, a 6/6 sash, paired 6/6 sash and another 6/6 sash to the east. The north and west elevations have no openings. The east elevation has a door opening set to the south. The building is of 2 by4 construction.

There is a double wagon shed about 110 feet north of the barn, along the east side of the drive. It is set well up the hill from the barn. It has a concrete foundation and vertical board siding with wire nails. A few battens survive on both the east and west elevations. The gable roof has an east-west ridge and has corrugated metal. The south elevation has a six-light sash set east of center. The west elevation has two very large wagon doors with a center post set between the doors. The north elevation has no openings. The east elevation has a six-light sash set north of center. The building is constructed of circular sawn 2 by 4's and 4 by 4's.

The Sharrer-Hosfeld Farm was a 33 acre tract in Baltimore County that was owned by John Lentz of Frederick County. When Lentz sold it to Henry Gross in 1835, Lentz was obviously not residing on the farm, if it was indeed improved. At best it was a small tenant farm, and sold for only $302.50, or just over $9 an acre. Though the deed was dated 1835, the sale must have occurred at least several years earlier as Gross was assessed for this land in 1833. At that time the land was worth $210 and the improvements $150. This suggests that the original log house may have been standing at the time. The house has undergone numerous changes, but several features argue for an early date of construction. One is the lack of a false plate in the roof framing. The few buildings where rafters were set in notches tend to be eighteenth- or perhaps very early nineteenth-century structures. The retention of exposed logs on the interior is also typically an indicator of relatively early construction and finish, though this is a less reliable diagnostic tool, since it is more often driven by economics.

Henry Gross died in the 1830's and his estate ended up in chancery. Henry's brother-in-law, Jacob Sharrer (Shearer) was administrator of the estate, and one of Henry's creditors. Apparently John Gross, one of Henry's brothers, sued in court and was made a trustee, then sold the farm in 1841 to Michael Ritter. The advertisement describing the farm unfortunately could not be found in the newspapers. Ritter, it appears, was acting on behalf of Sharrer and sold him the farm, but John Gross died before the deed could be executed. Michael Sullivan was then appointed trustee and completed the sale to Sharrer in 1847. If the technical details concerning the property were confusing, the reality was simple: The tax books for 1841 note that this was the farm of Jacob Sharrer and it had a log house. Obviously, the quantity of land was too little on which to survive solely from farming. Sharrer's livestock was only valued at $50, and probably consisted of a horse and cow, and perhaps a few pigs. He must have had another occupation, and the court records suggest as much, for Gross owed him money for making and mending shoes, for peeling bark, and for pantaloons and a saddle. The bark was probably used for a tannery, perhaps owned by Gross, and Sharrer may have been a leather worker with a naturally close relationship, beyond the familial one. Sharrer's inventory also included "old shoemaker tools."

Sharrer died in May 1855. He owned little property; one bed, a stove, a German Bible and some old books, a bureau, a looking glass, and a few tools. There was no livestock, no farming implements, and little furniture. The farm was purchased by Joseph Sharrer, who added a number of small parcels over the next seven years. By 1866 he had 56 acres, plus an 8 acre wood lot, and his livestock, worth $373, indicates that he was farming his small tract intensively. The farm was still too small to be sufficiently productive, and Joseph Sharrer apparently bought another farm in Middleburg District and had transferred his operation there by May 1872. The farm on Snydersburg Road probably became a tenant farm at that time. In 1876 it was 66 acres, still considered small, and had a "Two story log dwelling log Barn +c." The dwelling was valued at $340, the barn at $200, and the land, at $12 an acre, was worth $792. By this time the log addition had likely been made to the house. Log barns were already becoming rare, but would

more likely be found on a tenant farm.

Joseph Sharrer sold the farm to John Hosfeld in 1878. Hosfeld already owned 31 acres adjacent to this farm, but sold 25 1/4 acres, with the improvements, when he bought the Sharrer farm. Hosfeld embarked on a long term series of improvements to the farm, most notable of which was replacing the log barn with the existing frame one, which is dated 1885. The v-notch logs used in the new barn likely came from the old structure. The tax records for 1887 note simply "New Buildings $300," probably reflecting the replacement of the barn. John Hosfeld died in the 1890's and his son, George T. Hosfeld, acquired the interests inherited by his siblings. Most of the existing outbuildings were probably added by George Hosfeld in the first two decades of the twentieth century. The farm later passed to his son, Eli Robert Hosfeld, whose widow only recently moved off the farm. It was then sold for development, and all of the buildings were destroyed.
