

WI-418
Fulton Station
Salisbury
Private

c. 1890

One of most distinctive frame buildings that remains in the heart of Salisbury's industrial riverside district is the small two-story office and shed known as Fulton Station, erected around 1890 for the Baltimore, Chesapeake & Atlantic railroad. The unassuming two-story, one-room plan office was originally sheathed like the adjacent freight shed with vertical board-and-batten siding. The low pitched gable roof has slightly extended eaves with exposed rafter ends. Similar to other freight sheds of the nineteenth century is the long single story structure that extends northward from the two-story office. Part of the freight shed is enclosed with board-and-batten siding and the rest is reserved for open storage. Another section, an enclosed warehouse of later date, extends from the north end of the freight shed and it is covered with pressed metal. Historic photographs and Sanborn Insurance maps show another large warehouse building the formerly stood south of the office. It was removed in the wake of construction associated with the US Route 50 corridor. Fulton Station is now incorporated into the property held by the Farmers and Planters Company.

Due to its unusual size and shape as well the general scarcity of nineteenth-century railroad buildings, Fulton Station stands out in Salisbury as an important representation of the railroad's presence along the city's river front acreage. The board-and-batten siding that survives on the shed is characteristic of frame railroad architecture of the late nineteenth and early twentieth centuries.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

Fulton Station, formerly the Baltimore, Chesapeake, and Atlantic Freight Office and Shed, is now part of the Farmers and Planters Co. complex located along Mill Street north of the US Route 50 corridor in the center of Salisbury, Wicomico County, Maryland. The station faces west with the principal roof oriented on a north/south axis.

Dating around 1890, the freight office and shed is a three-part structure erected along the former right-of-way for the Baltimore, Chesapeake, and Atlantic railroad. The extant portion of the freight office and shed is part of a larger group of buildings that served the railroad at this location. The construction of the widened US Route 50 highway required the destruction of a larger warehouse building that stood south of the two-story office.

Supported on a low brick pier foundation, the composite structure consists of a two-story, one-room plan office that anchors the south end of the building. The office is sheathed with asbestos shingles and covered by low pitched asphalt shingle roof. Extending from the north wall of the office is a long single story gable roof freight shed that is partially enclosed and partially open. The south end of the freight shed, the portion which is enclosed, is sheathed with board-and-batten siding, and the gable roof is covered with standing seam metal. Attached to the north end of the open shed is a third section of later date sheathed with pressed metal and covered with a shed roof.

The west (front) wall of the two-story office is defined by a center two-over-two sash window with an off-center door reached by a set of four steps and a stoop. The second floor of the office is lighted by a single two-over-two sash window. The roof is finished with extended eaves and exposed rafter ends. Extensions of the plate support the eaves on the north and south sides. Piercing the roofline is a single flue brick stove flue. The south wall of the office is defined by a centered door opening on the first floor and a two-over-two sash window on the second floor.

The north wall of the office is covered on the first floor by the single story gable roofed freight shed. An off-center two-over-two sash window pierces the west side of the second floor wall. The freight shed is enclosed with board-and-batten siding on its south end, whereas the north end has four open bays facing Mill Street. The enclosed portion of the freight shed is access by way of single and double width freight doors.
