DESCRIPTION OF PROPERTY AND ELIGIBILITY DETERMINATION:

Summary Description:

The Pemberton Farm is a 149-acre property located in southern Queen Annes County on MD 404. It is located on a slight rise between a woodlot and fields, and consists of a farmhouse, a meat house, a pump house, two barns, a loafing shed, a shop, a milking parlor, and a dairy (milkhouse). The farmhouse is an L-shaped dwelling consisting of a five-bay main block and a rear kitchen wing. Differences in window sash in the main block may indicate different construction phases. A one-story shed-roof addition is located in the ell. Historic maps and publications tie the land to seventeenth-century settler John Pemberton, but the farmhouse was probably built by J. Holt between 1860 and 1877. A second construction phase circa 1891 may have been responsible for the western two bays of the dwelling or the kitchen wing. The outbuildings date to the first half of the twentieth century. Pemberton Farm is one of the few active dairy farms along this section of MD 404. The current owners use the acreage for both pastureland and cultivation of feed crops.

Significance:

Pemberton Farm does not retain sufficient architectural and historical integrity to be recommended eligible for listing in the National Register of Historic Places under any criterion. The farmhouse is a common vernacular form that is encased in modern materials with no architectural detailing or ornamentation. The farm buildings date to the first half of the twentieth century and are common forms that are at best marginal examples of agricultural structures. There are better examples of nineteenth-century farms in Queen Annes County.

7. Description

Inventory No. QA-529

Condition

excellent deteriorated
 good ruins
 fair altered

Prepare both a one paragraph summary and a comprehensive description of the resource and its various elements as it exists today.

Pemberton Farm is a 149-acre property located in southern Queen Annes County on the north side of Maryland Route 404. It is situated on a slight rise between a woodlot and fields, and consists of a farmhouse, a meat house, a pump house, two barns, a loafing shed, a shop, a milking parlor, and a dairy (milkhouse). Unlike other farms in the area, Pemberton Farm still operates as a dairy farm.

The farmhouse is a two-and-a-half-story, L-shaped dwelling consisting of a five-bay main block with a rear kitchen wing of the same height. A one-story addition is located in the rear ell. At first glance, this residence appears to be a symmetrical late nineteenth-century farmhouse; however, upon closer inspection, it may have actually been constructed in two phases. The eastern three-bay portion of the structure has six-over-six sash windows consistently throughout. The western two-bay portion has two-over-two sash windows throughout. If this house were constructed in two phases, then the eastern section would be the older of the two and its plan would have originally been side-hall. The western two bays and the rear ell may have been added later, giving the appearance of a symmetrical façade. The interior brick end chimneys are also dissimilar, further suggesting multiple construction phases. The structure is covered with vinyl siding, has an asphalt-shingle roof, and sits on a brick foundation. A small gabled porch roof at the front entry is supported by squared posts. A bay window has replaced the two first-story windows on the eastern section of the façade.

The property's outbuildings date to the late nineteenth/early twentieth-century. Directly behind the farmhouse is a frame gable-roof meat house with a shed-roof addition on its northern side wall. The agricultural buildings are located north of the farmhouse and are organized such that the larger buildings form the perimeter of the farmyard in which the smaller buildings are situated. The west side of the farmyard is framed by a large barn and a loafing shed, both of which were built in the 1930s. Both are frame with metal roofs. The gambrel-roofed barn is covered with vertical planks, has a hay hood on its south end, and has a large addition on its north end that substantially increases the size of the structure. The north end of the farmyard is formed by a smaller, more recent barn. Referred to as the 'colt barn,' the frame structure sits on a concrete-block foundation and has plank siding and a metal-covered gabled roof. Smaller outbuildings within the middle of the farmyard include the milking parlor, dairy (milkhouse), and shop, all of which were constructed during the first half of the twentieth century. The milking parlor is a concrete-block structure with a gabled metal roof. The dairy and shop are frame structures on concrete-block foundations and are covered with wood siding and have metal gable roofs. The dairy has a tall brick chimney with an arched hood on its eastern side wall. The east side of the farmyard is framed by a pumphouse and a corncrib/wagonshed. The pumphouse is a low concrete-block structure with a metal roof. The corncrib/wagonshed is a frame building with a gable-front metal roof.

Evaluation for:

National Register Maryland Register not evaluated

Prepare a one-paragraph summary statement of significance addressing applicable criteria, followed by a narrative discussion of the history of the resource and its context. (For compliance projects, complete evaluation on a DOE Form – see manual.)

Significance

Pemberton Farm does not retain sufficient architectural and historical integrity to be recommended eligible for listing in the National Register of Historic Places under any criterion. The farmhouse is a common vernacular form that is encased in modern materials with no architectural detailing or ornamentation. The farm buildings date to the first half of the twentieth century and are common forms that are at best marginal examples of agricultural structures. There are better examples of nineteenth-century farms in Queen Annes County.

Historic Narrative

Pemberton Farm is named for the late seventeenth-century settler John Pemberton, who received 600 acres as payment for bringing a dozen settlers to Maryland (Messix 2001). A late nineteenth-century record of prominent Maryland eastern shore residents suggests that the Jump family acquired the property before the 1840s (Chapman 1898). This publication indicates that in 1840 Stephen P. Jump, a Queen Annes County magistrate, was born on a tract of land called the Pemberton Resurvey (Chapman 1898). An 1860 map of Queen Annes County shows S.P. Jump as the owner of a property located on the north side of the road between Hillsboro and Wye Mills (Strong 1860). Jump retained ownership of the property through 1877, at which time a residence slightly to the west and closer to the road appears as the dwelling of J. Holt (Lake, Griffing and Stevenson 1877). The Holt House appears to be in the location of the current Pemberton Farm and may be the earlier, eastern part of the farmhouse. If this is the case, then a portion of the farmhouse on Pemberton Farm dates between 1860 and 1877. It is not known if this dwelling was a separate property or a tenant house on the Jump Farm, which was no longer in existence by 1905 (USGS 1905). Given the current name of the farm, it is likely that the property being inventoried on this form was a part of the original Pemberton Resurvey.

Queen Annes County's tax records indicate that the farmhouse was built in 1891. The current owner claims that during remodeling of the interior, he found an 1891 bill-of-sale for lumber apparently used in house construction (Messix 2001). Historical maps and architectural features of the dwelling indicate it was likely built during the last half of the nineteenth century (Strong 1860; Lake, Griffing and Stevenson 1877). It may be that the bill-of-sale was for lumber used to construct the western two-bay addition or the kitchen wing.

During the period in which the farmhouse on Pemberton Farm was constructed, the primary crops grown in Queen Annes and Talbot counties were feed grains, such as wheat, oats, and rye. Other important products included Irish potatoes, sweet potatoes, hay, orchard produce, wool, and butter (Agriculture Census Schedules 1880). Agricultural diversification after the Civil War was characterized by the industrialization of agriculture, the beginning of mechanized farming, and the emergence of strong regional urban markets (Lanier & Herman 1997:178). In addition, the extension of the Maryland & Delaware Railroad to neighboring Hillsboro in 1868 provided a high-speed transit for formerly untransportable produce. Produce such as berries, cherries, peaches, and perishable vegetables as well as small game and animals including partridges, wild duck, geese, rabbits, and poultry could be shipped farther and faster (Preston 1983:234). Eggs and oysters were other major products.

Historic Narrative (continued)

In the late nineteenth century, Queen Anne's Railroad was chartered to connect Baltimore with the Atlantic coast. By 1896, a single track bisected Pemberton Farm, isolating approximately 25 acres on the north side of the railroad. The railroad track between Queenstown and Queen Anne was in service until 1976 when it was abandoned and the track was removed for salvage (Hayman 1979:168). Stations were established at Willoughby and Queen Anne, at approximately equal distances from Pemberton Farm. This line serviced the growing number of canneries in this portion of the Eastern Shore region.

During the late nineteenth and early twentieth centuries, many canneries were established in the area. Canners were important commercial enterprises on the Eastern Shore, often backed by big-city businesses, but sometime operated by small local businesses. The area's fertile land, multiple farms, and un-unionized labor created the perfect climate for massive farm production. Queen Annes County canneries packed peaches, peas, tomatoes, and corn (Burton 1986:36). Technological advancements in food preservation and the manufacture of cans fueled the county's canning industries around the turn of the twentieth century. Many small towns had their own cannery with produce provided by the local farms. Canneries were established at Willoughby and Queen Anne. Like most of the surrounding farms, it is likely that Pemberton Farm grew crops for the local canneries. Cannery production peaked in 1920 with subsequent decline during the mid- and latter twentieth century.

By the early twentieth century, significant changes in farming practices ushered in a new period of agriculture. The use of engine-driven trucks and tractors, the importance of hygienic farming standards, and the expansion of truck farming became important trends. Dairy farming became extremely important. The milking parlor and dairy on the Pemberton Farm were built in direct response to this. Also during this period, concrete and concrete-block gained popularity as building materials. Many of Pemberton Farm's current outbuildings were constructed at this time. Pemberton Farm is one of the few active dairy farms along MD 404. The current owners use the 149-acre farm for both pastureland and cultivation of feed crops.
