

Property Address: 1152 East Central Avenue

Owner Name/Address: Anne Arundel County Board of Education, 2644 Riva Road, Annapolis MD 21401

Year Built: 1936, 1959, 1963

Description:

The interior of the Mayo Elementary School's 1936 wing is organized around a center hall which runs south to north through the building. When the school opened in 1936, there was a principal's office, a classroom, an auditorium and a stage on the east side of the hall. Two classrooms and two smaller rooms, probably bathrooms, were located on the west side of the hall. Alterations such as under-size window replacements, dropped ceilings, carpeting, and floor plan changes have occurred, however some original materials remain, as described below.

The hall has an original terrazzo floor, original plaster walls, and original baseboards. The baseboards are plain with cyma reversa base molding and quarter round shoe molding. The modern dropped ceiling has modern light fixtures. Modern doors lead from the hall to the rooms. The original beaded door frames remain intact, but the 1-light transoms above them have been filled. An alcove in the north end of the hall contains a modern water fountain. The original doors remain in the south end of the hall, however the entry in the north end of the hall has been completely removed.

The former principal's office, now used for tutoring, has a carpeted floor, original plaster walls with baseboards, and an original plaster ceiling with modern light fixtures. An original window frame and radiator occupy the south wall. A modern vent is located on the east wall.

The southeast classroom has a carpeted floor and original plaster walls with baseboards. The dropped ceiling has modern light fixtures. The window frames and radiators remain intact. The classroom also contains one original bookcase and a simple closet. The chalkboards and all other furnishings appear to be of a later date.

The former auditorium, now the northeast classroom, has a carpeted floor, original plaster walls with baseboards, and a dropped ceiling with modern light fixtures. The window frames and radiators remain intact along the east wall. This room has no original built-in furnishings or closets. The stage, which formerly opened along the north wall, has been completely covered so that no visible evidence of it remains in the classroom.

The former stage, now a closet, has two steps leading up to a wood floor. Modern shelves line the plaster walls on all sides. The plaster ceiling has modern light fixtures. If there were windows on the north wall of the stage, they were sealed at the time of the 1959 addition. One original radiator remains. The former auditorium is no longer accessible from the stage.

The small room in the northwest corner of the building, possibly a former bathroom, has a terrazzo floor, original plaster walls with baseboards, and an original plaster ceiling with modern light fixtures. Any windows on the north wall have been sealed. An original radiator remains, but all other fixtures have been removed. This room currently serves as a closet.

The northwest classroom has a carpeted floor, original plaster walls with baseboards, and an original plaster ceiling with modern light fixtures. Original window frames and radiators remain along the west wall. The classroom also contains an original built-in bookcase and a simple closet. The chalkboards and other furnishings are later.

The southwest classroom has a modern tile floor, original plaster walls with baseboards, and a dropped ceiling with modern light fixtures. The original window frames and radiators remain intact. The classroom contains one original built-in bookcase and a small closet. The chalkboards and other furnishings are later.

The small room in the southwest corner of the building, possibly a former bathroom, has a terrazzo floor, original plaster walls with baseboards, and an original plaster ceiling with modern light fixtures. An original window frame and radiator remain along the south wall. Other fixtures have been removed. This room currently contains a kiln and pottery supplies.

In summary, the floor materials have been replaced in all classrooms. The original plaster remains on the walls, but three out of four classrooms have dropped ceilings. The original radiators and window frames remain, although the original windows do not. Aside from the three built-in bookcases, no original furnishings remain. This building does not have any outstanding architectural detail; only the simplest materials were used. The building as originally constructed was not an outstanding example of an educational facility or any style of architecture. Changes made over the years have also compromised the building's integrity.

CAPSULE SUMMARY SHEET

Survey No.: AA-2207

Construction Date: 1936, 1959, 1963

Name: Mayo School

Location: 1152 East Central Avenue, Mayo vicinity, Anne Arundel County

Public Ownership / Present use: Education / Occupied / Condition: Good / Restricted Access

Description:

The Mayo School is located on the northeast corner of East Central Avenue (MD 214) and Mayo Ridge Road in the Mayo community of Anne Arundel County. Located on 7.27 acres of open land, the school property includes a 1936 school building with 1959 and 1963 additions, three modern mobile classrooms, and playgrounds and athletic fields. An earlier school building stands on a separate property across East Central Avenue to the west.

The 1936 school building faces south toward Mayo Ridge Road. The 1-story, 5-bay building is constructed of brick and has a concrete foundation. A brick parapet wall with concrete coping surrounds the flat roof. The tall, narrow window openings have bridge jack arches and sills. The original windows have been replaced with modern, 1/1 double-hung windows. The new windows are shorter than the original openings, and the space above them has been filled. An entry portico projects from the south elevation. A 1959 addition extends north and east from the 1936 building. A 1963 addition extends east and south from the 1959 addition so that the entire complex forms a "U".

Significance:

The Mayo School is a simple, utilitarian building typical of those constructed during the 1930s. The building includes features such as a central passage, large windows and doors, and simple, quality materials. The original design included flexibility measures such as an auditorium that could later be converted to a classroom. The design and expansion of the school reflects the transition of a historically rural agricultural community into a resort and bedroom community. Until the early-twentieth century, Mayo depended on tobacco, grain crops and the seafood industry. Resort communities and suburbanization changed the landscape and economy beginning in the 1920s. The Mayo School was constructed in 1936 to replace an earlier rural schoolhouse and expanded in 1959 and 1963 to accommodate continued population growth. The Mayo School is not eligible for the National Register. The property's association with the growth of the community does not constitute significance. The property also is neither a distinctive work of architecture nor an outstanding example of its type.

Resource Count: 1

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The Mayo School is on the northeast corner of East Central Avenue (MD 214) and Mayo Ridge Road in the Mayo community of Anne Arundel County. The property occupies 7.27 acres of flat, open land in a low-density residential area. The school complex consists of a 1936 school building with 1959 and 1963 additions. A parking lot and playgrounds are located to the north of the buildings, and athletic fields are located to the east. Three mobile classrooms are currently clustered at the south end of the site. An earlier school building, dating to 1907, is located across East Central Avenue to the west on a separate tax parcel.

The 1936 school faces south toward Mayo Ridge Road. The 1959 addition extends north and east from the 1936 building. The 1963 addition extends east and south from the 1959 addition so that the entire complex forms a "U". The 1-story, 5-bay 1936 section is constructed of brick and has a concrete foundation. A brick parapet wall with concrete coping surrounds the flat roof. The tall, narrow window openings have bridge jack arches and sills. The original windows have been replaced with modern, 1/1 double-hung windows. The new windows are shorter than the original openings, and the space above them has been filled. An entry portico projects from the south elevation.

The main entry to the 1936 building is located in the center bay of the south elevation. The parapet wall is raised slightly over this bay, and the entry portico projects forward. The 1-bay portico has a flat roof and arched openings on the east, south, and west sides. Concrete steps lead through the east and west openings. Within the portico is a set of double, half-glass doors beneath a 4-light transom. Two widely spaced windows are located on each side of the entry.

The west elevation of the 1936 building has 10 windows symmetrically arranged into two groups of five. The north elevation of the building is now obscured by the 1959 addition. The east elevation is identical to the west.

A narrow, central passage runs north to south through the 1936 building. Two classrooms and two smaller rooms are located on each side of the passage. The small room in the northeast corner of the building was originally a stage which connected to one of the classrooms. The small room in the southeast corner was originally the principal's office. The interior of the building has a terrazzo floor, plain plastered walls, and a modern tile ceiling. The original doors have been replaced, and the transoms above them have been filled. A simple baseboard runs the length of the passage, and several original radiators remain in place. The north end of the central passage connects to the 1959 addition.

The 1959 addition consists of administrative offices, a gymnasium/auditorium/cafeteria, and a group of classrooms. The administrative wing extends north from the 1936 building. The wing is constructed of brick and has a low, flat roof. A recessed band of 3-light awning windows stretches across the west elevation. An entry is located on the north elevation. The gymnasium/auditorium/cafeteria extends east from the administrative wing. Also constructed of brick, it is the tallest part of the school complex and has a low-pitched gable roof. A flat-roofed kitchen and service area extends south beneath the clerestory on the north wall of the gymnasium. A small classroom wing extends east and wraps the south wall of the gymnasium. The classroom wing is stylistically identical to the administrative wing and has bands of windows on the north and south elevations.

The 1963 addition extends east and south from the 1959 classroom wing. It has a central passage running north to south with classrooms on each side. Entries are located at each end of the passage. The east and west elevations of this addition have the same bands of awning windows that are found on the 1959 addition.

Prepare both a summary paragraph of significance and a general statement of history and support.

The Mayo School is a simple, utilitarian building typical of institutional buildings constructed during the 1930s. The design and expansion of the school reflects the transition of a historically rural agricultural community into a resort and bedroom community. Until the early-20th century, Mayo's economy was based in tobacco, grain crops, and the seafood industry. Resort communities and suburbanization changed the landscape and economy beginning in the 1920s. The Mayo School was constructed in 1936 to replace an earlier rural schoolhouse and expanded in 1959 and 1963 to accommodate population growth.

The community of Mayo occupies the peninsula between the South River and the Rhode River on the Chesapeake Bay. Originally inhabited by the Susquehanna, the area was settled by English colonists beginning in 1652, when Lord Baltimore granted 490 acres to Edward Selby. By the time of his death in 1688, Selby owned 1400 acres which constituted most of the peninsula. From the late-17th through the early-19th centuries, much of the land was owned by the Linthicum family and the Cotter-Gassaway family. The land was rented to tenant farmers for the cultivation of tobacco, the mainstay of the Maryland economy. Tobacco culture peaked in the years immediately preceding the Revolutionary War, after which depleted soils led to decreased yields. Some farmers at this time began growing grain crops; others turned to the newly developing seafood industry (Mullins 1996, 26; Bradford 1977, xvi-xvii).

In 1835, Commodore Isaac Mayo of the United States Navy acquired a large parcel of land known as "Cotter's Desire." The community was later named "Mayo" in his honor. The area experienced a brief period of agricultural prosperity during the 1830s and 1840s following the development of lime fertilizer, and again during the Civil War when Union troops occupied Annapolis. Following the war, many large estates were subdivided into smaller farms or rented to multiple tenant farmers. Although cultivation of tobacco continued, grain and produce crops became increasingly important. Many local residents also worked as "watermen," harvesting oysters during the winter and crabs during the summer. Local produce and seafood were shipped to cities such as Baltimore and Annapolis on steamboats. The Tolchester Company, formed in 1877, operated steamboat routes that included Mayo until the 1920s (Taylor et al. 1953, 6; Bradford 1977, xvii; Mullins 1996, 28, 54-55).

The early 20th century saw the development of summer colonies and public beaches in the Mayo area. The first subdivision of the large farms into residential lots occurred in 1916 when Oscar Keys, who bought Cotter's Desire from the Mayo family in 1915, sold eight acres to Albert Bull, Leander Jackson, and John Evans. The Beverly Beach resort, which included a public beach as well as summer cottages, was developed beginning in 1924. Other beach resorts included Mayo Beach (1939), Triton Beach (1942), and Ponder's Cove (1950). Local residents found summer employment at the resorts, and the surge in population boosted the seafood industry. Two oyster shucking houses operated in Mayo during the early 20th century. As the century progressed, many houses that began as summer cottages were upgraded to become year-round homes. The new residents generally commuted to jobs in Annapolis, Washington D.C., or Baltimore. The population of

8. Significance (Continued)

Mayo increased further as suburbanization continued from the 1940s through the present. The population nearly doubled between 1960 and 1995, with most suburban development concentrated along the waterways (Taylor et al. 1953, 6, 16-19, 22; Bradford 1977, xvii; Mullins 1996, 215).

The first public school in Mayo opened following the passage of the Maryland Public School Law of 1865. The Law established a statewide system of primary and high schools and included provisions for the training of teachers to state standards. The one-room, wood-frame Mayo School, opened after the Civil War, was located along the "old county road" (MD 214) on the north end of the peninsula. An additional school opened on the south end of the peninsula in 1891. The first building was later moved and used as an addition to a general store. The second building was converted to a residence. The current condition of the buildings is unknown. In 1907, the two schools were consolidated and began meeting in a new, three-room wood-frame building located across the street from the present school site. That building is now the Mayo Post Office. In 1916, the Maryland School Law passed, providing funds for school construction and consolidation. A period of growth for Mayo School began in 1928 when the Woodland Beach School, located to the north, closed and the students began commuting to Mayo. In 1936, a new school building opened on the present site. The fifth grade class of 1952-1953 described the building as follows:

The new school is modern, with three large classrooms that have adjoining cloakrooms, and a small auditorium with a stage. This auditorium was made so that it could be easily converted into a classroom if the need arose. There is an office for the principal, two large lavatories and a basement in which is a central heating plant. There are drinking fountains in the hall and an electric bell. In each classroom is a built-in bookcase, much blackboard space and a bulletin board.

Despite the conversion of the auditorium into a classroom and the removal of the seventh grade to a junior high school in Annapolis during the 1940s, the Mayo School quickly became overcrowded. By the early 1950s, the school was using the three rooms of its former building across the street as well as an unused classroom at the neighboring Galesville School. A substantial addition to the Mayo school opened in 1959. The addition contains administrative offices, classrooms and a gymnasium/auditorium/cafeteria. An additional classroom wing was constructed in 1963. The school also currently uses three mobile classrooms (Warden, 4-5; Taylor et al. 1953, 30-33).

The 1936 Mayo School is a common example of an institutional building of the 1930s. The design is simple and utilitarian with little ornamentation. The double-loaded central passage, tall windows and interior transoms promoted cross-ventilation while maximizing natural light. The stage and classroom/auditorium provided flexibility for the growing and changing school. The smaller rooms in the corners of the building have changed function many times over the years. Materials such as concrete, brick, terrazzo and plaster were simple and sturdy. The portico on the south elevation marks the main entry to the building and provides the sole exterior ornamentation. In general, the building, like others of its period, has a very practical design.

ADDRESS: 1152 East Central Ave., Mayo vicinity, Anne Arundel County

8. Significance (Continued)

National Register Evaluation:

Constructed in 1936, 1959 and 1963, the Mayo School is not eligible for the National Register of Historic Places. The property is not eligible under Criterion A, as research conducted indicates no association with any historic events or trends significant in the development of national, state or local history. Construction and enlargement of the building did reflect the growing population of Mayo, however many resources are associated with that growth, and that association in itself does not constitute significance. The building is also not an immediate or direct result of any major changes in the education policies of Anne Arundel County or the state of Maryland. Historic research indicates that the property has no association with persons who have made specific contributions to history, and therefore, it does not meet Criterion B. The property is not eligible under Criterion C because it is not a distinctive work of architecture, nor is it an outstanding example of its type. The building has a very basic, common design with little ornamentation and no unusual features. Also, due to changes such as the replacement of original windows and doors, the building does not retain a high enough level of integrity to be an outstanding example of a typical school building of its time period.
