BACKFILL TRENCH FOR PIPES THROUGH DUMP MATERIAL

THIS TREATMENT IS TO BE USED WHEN ANY OF THE PIPE CULVERTS PASS THROUGH AREAS OF SANITARY LANDFILL. THE 12' WIDTH WAS SELECTED SO THAT THE EXCAVATION COULD BE PERFORMED WITH GRADING EQUIPMENT. THE PRICE BID FOR PIPE SHALL INCLUDE THE INSTALLATION OF PIPE, TRENCH & BORROW MATERIAL.

GENERAL NOTES

1. SPECIFICATIONS: S.R.C. Specifications and Errata to Specifications dated March 1968 and Special Provisions for materials and construction. AASHO Standard Specifications for Highway Bridges dated 1969, and 1970 Interim Specs. for Design. For reinforced concrete design fs = 20,000 psi except that the concrete in bridge deck slabs supported by steel beams has an fc = 1050 psi.
2. LOADING: [illegible]
3. CONCRETE: Class A Concrete shall have a minimum compressive strength of 3,000 psi at 28 Days. See Special Provisions.
4. CHAMFER: All exposed corners of concrete shall be chamfered [illegible]
5. REINFORCING STEEL: Reinforcing Steel shall conform to ASTM Designation A615 Grade 40. All splices shall be lapped a minimum of 24 bar diameters unless otherwise noted. Minimum cover for any bar shall be 2" unless otherwise noted.
6. STRUCTURAL STEEL: Structural Steel shall be A.S.T.M. Designation A 36.
7. [illegible]
8. One coat of pure epoxy coating shall be applied to all pier caps & pedestals, abutment seats & pedestals and abutment backwalls.

GENERAL NOTES

1. SPECIFICATIONS: Maryland SRC Specifications and Errata to specifications dated March 1968 and special provisions for materials and construction. A.A.S.H.O. Standard Specifications for Highway Bridges dated 1965 and 1970 interim specifications for design. For reinforced concrete design, f_c 1200 psi except that the concrete in bridge deck slabs supported by steel beams has an f_c = 1050 psi.
2. LOADING: H S 20-44 or 2-24,000 lb axles spaced 4' apart, whichever governs, with provisions for a Future 2" Wearing Surface.
3. CONCRETE: Class A-1 Concrete shall have a minimum compressive strength of 3000 psi at 28 Days.
4. CHAMFER: All exposed edges of concrete shall be chamfered ¾ x ¾ with milled chamfer strips, except where indicated by the following notation on the plans "Do Not Chamfer".
5. REINFORCING STEEL: Reinforcing Steel shall conform to A.S.T.M. Designation A-615 Grade 40. All splices shall be lapped a minimum of 24 bar diameters unless otherwise noted. Minimum cover for any bar shall be 2" unless otherwise noted.
6. STRUCTURAL STEEL: Structural Steel shall be A.S.T.M. designation A 588.
7. FOUNDATION: Recommendations are given on foundation sheet.
8. One coat of pure epoxy coating shall be applied to all pier caps, pedestals, abutment seats, and abutment backwalls.

GENERAL NOTES

1. SPECIFICATIONS: Maryland SRC Specifications and Errata to specifications dated March 1968 and special provisions provisions for materials and construction. AASHO Standard Specifications for Highway Bridges dated 1969 and 1970 interim specifications for design. For reinforced concrete design f'c 1200 psi except that the concrete in bridge deck slabs supported by steel beams has an fc=1050 psi
2. LOADING: HS 20-44 or 2-24,000 lb axles spaced 4' apart whichever governs; with provisions for a future 2" Wearing Surface.
3. CONCRETE: Class "A-1" Concrete shall have a minimum compressive strength of 3,000 psi at 28 Days.
4. CHAMFER: All exposed edges of concrete shall be chamfered 3/4" x 3/4" with milled chamfer strips except where indicated by the following notation on the plans; "Do Not Chamfer".
5. REINFORCING STEEL: Reinforcing steel shall conform to ASTM Designation A 615 Grade 40. All splices shall be lapped a minimum of 24 bar diameters unless otherwise noted. Minimum cover for any bar shall be 2" unless otherwise noted.
6. STRUCTURAL STEEL: Structural steel shall be ASTM designation A 588.
7. FOUNDATION: Recommendations are given on foundation sheet.
8. One coat of pure epoxy coating shall be applied to all pier caps & pedestals, abutment seats, and abutment backwalls.

GENERAL NOTES

SPECIFICATIONS: Maryland SRC Specifications and Errata to specifications dated March 1968 and special provisions for materials and design shall conform to AASHO Standard Specifications for Highway Bridges, dated 1969 and 1970 Interim Specifications. For design of structures see design & type, size & location of piles (Est. 40 Ton).

1. LOADING: H S 20-44 + 1 1/2 (MS 18 + 1 1/2) (MOD) unless specified & apart, which are of general use with provisions for a future 4 inch wearing surface.
2. CONCRETE: Class "A" Concrete shall have a minimum compressive strength of 3,000 psi at 28 Days.
3. CHAMFER: All exposed corners of concrete shall be chamfered 3/4" x 3/4" unless otherwise shown or noted on the plans (Typical).
4. REINFORCING STEEL: Reinforcing steel shall conform to ASTM Designation A 615 Grade 40. All splices shall be lapped a minimum of 24 Bar Diameters unless otherwise noted. Minimum cover for any bar shall be 2" unless otherwise noted.
5. STRUCTURAL STEEL: Structural Steel shall be ASTM Designation A 588.
6. FOUNDATION: Recommendations are based on investigation by consultants.
7. One Foot of plant growth, loose rock, fallen trees or other deleterious material shall be removed from the Right-of-Way, and disposed of as directed by the Engineer.

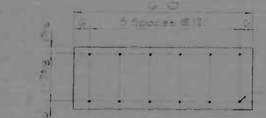
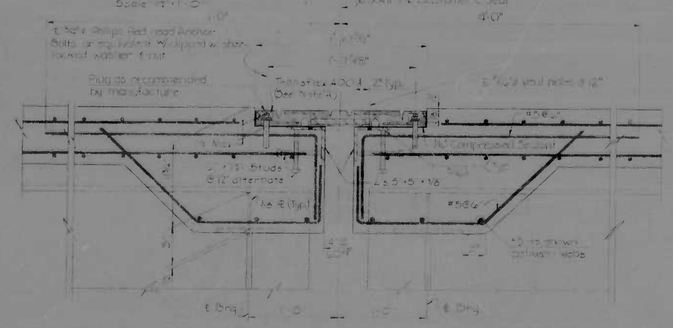
PREFORMED COMPRESSION SEAL EXPANSION DAM AT ABUTMENTS

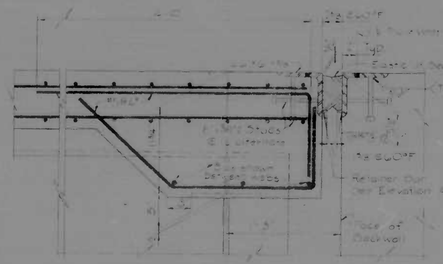


PLYWOOD TEMPLATE

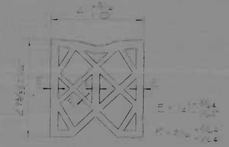


SECTION A-A

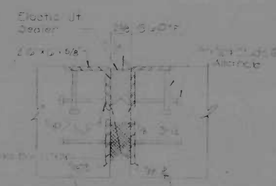
STEEL REINFORCED ELASTOMERIC EXPANSION DAM AT PIERS



SECTION C-C



ELASTIC JOINT SEALER



SECTION E-E

NOTE A

The expansion joint shall be set anchored bonded and sealed as recommended by the manufacturer and as set forth in the Special Provisions. Anchors shall be same expansion type.

Locate holes with plywood template for 4½ Phillips Red Head Anchor Bolts. Drill holes 10" ± deep.

Holes shall not be drilled nor anchor bolts set until the concrete is at least 7 days old.

Each section of expansion joint shall be installed starting at the roadway

Tighten anchor bolts to 85 foot pounds

Retighten to 85 foot pounds 30 ± miles after initial tightening

Clean anchor bolt cavity and seal with sealant

Fill cavity with sealant to depth of ⅞ and push plug down to snap lock. Scrape off all excess sealant.

Manufacturer shall be consulted on installation and availability of service sections.

NOTE B

Steel bar, dowels and retainer bars in Expansion Joints shall be ASTM Designation A-36

Notes:

1. All steel used in bearings shall conform to ASTM Designation A-588.
2. All anchor bolts, hex nuts & washers shall be hot dipped galvanized.
3. Epoxy resin grout to be applied on full contact area between the following
   - Fiber reinforced elastomeric Pad & Masonry Plate
   - Fiber reinforced elastomeric Pad & Teflon Plate
   - Sole Plate & Stainless Steel Plate
   - Masonry Plate & concrete Pad
4. Epoxy resin Patching compound shall be used if air temperature is between 35°F and 70°F.
5. Fill all bolts and holes around another bolts with non hardening Caulking Compound or Plastic Joint Sealer.

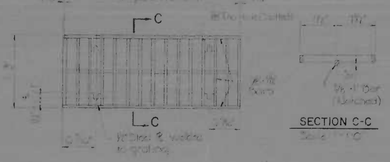
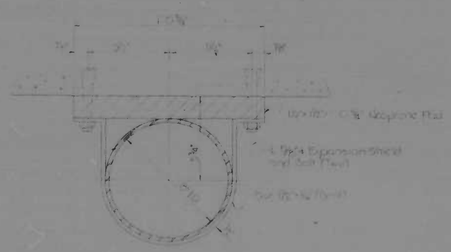
SCUPPER DETAILS - CAST IRON

ALTERNATE SCUPPER - FABRICATED STEEL



SCUPPER GRATE DETAILS



SCUPPER GRATE NOTES

Material: Gratings to be structural steel as per ASTM serial designation A 36, galvanized as per ASTM Designation A 123.
Grating Units: Units shall be welded type, grating (ASTM A 569).
Welding: Scupper grating to be Fillet Welded or Electric Pressure Welded.
Assembly: The frames and gratings to have the bearing surfaces finished, so that gratings shall fit the frames without wedging and shall be interchangeable.

SCUPPER NOTES

1. Cast Iron Scuppers to be gray cast iron as per ASTM serial designation A48 class No 30B.
2. Scuppers Steel Scuppers to be Fabricated of structural steel ASTM steel designation A 36.
3. All scupper steel shall be hot dipped galvanized.

GENERAL NOTES

1. SPECIFICATIONS: Specifications and Similar to specifications dated March 1968 and Special Provisions for Materials and Construction A.A.S.H.O. Standard Specifications for Highway Bridges dated 1969 and its 1970 Interim Specification for design for Reinforced Concrete Design, for 3000 psi, except that the concrete in bridge deck slabs supported by steel beams has an f'c = 4,000 psi.
2. LOADING: H 20-44 or Tr 36000 # axle spaced four feet apart which shall govern with provisions for a future 2" wearing surface.
3. CONCRETE: Class 'A' Concrete shall have a minimum compressive strength of 3000 psi at 28 Days. See Special Provisions.
4. CHAMFER: All exposed corners of concrete shall be chamfered 3/4" by 45° with rolled chamfer strips except where indicated by the following notation on the plans: "Do not Chamfer".
5. REINFORCING STEEL: Reinforcing steel shall conform to ASTM Designation A-615 Grade 60. All splices shall be lapped a minimum of 24 bar diameters unless otherwise noted. Min. Cover for any bar shall be 2" unless otherwise noted.
6. STRUCTURAL STEEL: Structural Steel shall be ASTM Designation A-588. See Special Provisions.
7. FOUNDATION: Recommendations are given on individual foundations.
8. One coat bituminous coating shall be applied to all pier cap, caps & pedestals, abutment seats & pedestals and abutment backwalls.

FRAMING PLAN - SBR

FRAMING PLAN - NBR

TYPICAL GIRDER ELEVATION - SPANS 2 & 3

Note: For dimensions of SPAN LENGTH "L" See Table this Sheet.

Note all intermediate diaphragms in SBR shall be placed normal to G-101 in Span No. 1, G-201 in Span No. 2, G-301 in Span No. 3 & G-401 in Span No. 4 respectively.

Note all intermediate diaphragms in NBR shall be placed normal to G-116, G-217, G-317 & G-418 for Spans must be parallel.

Fixed Brg. Typ. in Span No. 4 is G-208 for G-408 thru G-401 & G-208 for G-408 thru G-401

Notes:
All plates and designed components are therefore there shall be no temporary intermediate supports while structure is being placed.
All structural steel shall conform to ASTM Designation A-588.
All members & fills shall be hot dipped galvanized.
All intermediate stiffeners and connection plates shall be placed right against the tension flange and top welded to the same flange.
All painting difficulties shall be milled to bear against flanges to ensure full bearing unless welds are removed. Where fillers are in the form of plates, they shall be welded to the girder web plate to close spaces.
All bolted connections shall be galvanized.
All bearing surfaces of all plates shall be finished to a smooth surface free from burrs, slivers, laminations, tears or defects which would interfere with the proper seating and hearing of the adjacent surfaces.

Notes:
All girders are designed composite and therefore there shall be no temporary intermediate supports while concrete is being placed.
All structural steel shall conform to ASTM Designation A-588.
All anchor bolts shall be hot dipped galvanized.
All intermediate stiffeners and or connection plates shall be placed tight against the tension flange and fillet welded to compression flange.
All bearing stiffeners shall be milled to bear against tension flange and be continuously welded to compression flange.
All stiffeners at the end of girders shall be vertical.
All dimensions given are horizontal dimensions.
All bearing stiffeners shall be placed along ℄ Brg's except those on exterior face of exterior girders shall be placed normal to girders.
All field bolts shall be 7/8 ϕ high strength bolts.

F-100S	12	8	20	12	1"	1"	1"

* Notes: 1. For Bearing Type F-400 use 1½"ø Swedged Anchor Bolt with 3½"x3½" washer & hex nut. Set the bolt 1'-3" in 1¾"ø drilled hole in Masonry.

2. For Bearing Type F-100G & F-100S use 1¼"ø Swedged Anchor Bolt with 3"x3"x¼" washer & hex nut. Set the bolt 1'-0" in 1½"ø drilled hole in Masonry.

EXPANSION BEARING – TYPE E-150, E-100G & E-100S

FIX BEARING – TYPE F-400, F-100G & F-100S

NOTES:
1. All Steel used in bearings shall conform to A.S.T.M. Designation A-588.
2. All Anchor Bolts, Hex nuts & washers shall be hot dipped galvanized.
3. Epoxy Resin shall be applied on full contact area between the following:
   - Fiber reinforced elastomeric pad and Masonry Plate.
   - Fiber reinforced elastomeric pad and Teflon Plate.
   - Sole Plate and Stainless Steel Plate.
   - Masonry Plinth (Concrete Pad).
4. Epoxy Resin Polishing Compound shall be used if air temperature is between 50°F and 70°F.

Notes:

Minor deviation from box dimensions will be allowed if construction designs so require. But only after approval by the Interstate Division for Baltimore City.

The box cover is to be of aluminum alloy with pebble or shot finish. The face of the cover must be flush with the face of concrete. A ¼" rubber gasket is to be fitted between the cover and box flanges. Drill and tap holes in box flanges and fasten cover to box with ½" dia. stainless steel countersunk Phillips flathead screws.

Pull box shall be hot dipped galvanized after fabrication.

All box dimensions are inside dimensions.

GENERAL NOTES

1. DESIGN WIND 85 PSF.
2. CONCRETE: Class 'A' Concrete shall have a minimum compressive strength of 3000 PSI at 28 days for Reinforced Concrete design in accordance with the Special Provisions.
3. CHAMFER: All exposed corners of concrete shall be chamfered 3/4" with rubbed chamfer strips.
4. REINFORCING STEEL: Reinforcing Bars shall conform to ASTM designation A615 Grade 60 as noted. Shall be coated in accordance with Section 711 of the Specifications unless otherwise noted. Minimum cover for any bar shall be 3" unless otherwise noted.
5. Anchor bolts 1 1/2" ø and including 1 1/4" ø shall conform to the requirements of ASTM designation A 325. Anchor bolts greater than 1 1/4" ø shall conform to the requirements of ASTM designation A 449.
6. Minimum design foundation bearing pressure equals 5000 PSF.
7. EXISTING UTILITIES: Existing conduits, pipes, mains, overhead lines, service connections etc. which may affect the work of this contract have been shown on the plans from records only. However the accuracy and completeness of this information is not guaranteed. It shall be the responsibility of the contractor to locate and protect all existing facilities which might be affected by the work of his operations.
8. HORIZONTAL ALIGNMENT: Position of overhead signs so that the face is normal to right angles to normal edge of roadway, for right angles, offset right angles to the tangent of the curve at the sign location for a horizontal curve.

GENERAL NOTES:

1. SPECIFICATION: Maryland S.R.C. Specifications and efforts to "Specifications dated 1969 Sub Special Provisions for Materials and Construction" AASHTO Specification for the Design & Construction of Structural Supports for Highway Signs, Luminaires and AASHTO Standard Specification for Highway Bridges 1969.

2. DESIGN WIND: 30 PSF.

3. CONCRETE: Class 'B' Concrete shall have a minimum compressive strength of 3000 P.S.I. at 28 days. For Reinforced Concrete Design f'c = 3000 P.S.I., See Special Provisions.

4. CHAMFER: All exposed corners of concrete shall be chamfered 3/4" with milled chamfer strips.

5. REINFORCING STEEL: Reinforcing steel shall conform to A.S.T.M. Designation A 615 Grade 60. All splices shall be lapped a minimum of 30 bar diameters unless otherwise noted. Minimum cover for any bar shall be 3" unless otherwise noted.

6. Anchor bolts up to and including 1 1/4" ø shall conform to the requirements of A.S.T.M. designation A307. Anchor bolts greater than 1 1/4" ø shall conform to the requirements of A.S.T.M. designation A 449.

7. Minimum design foundation bearing pressure equals 3000 PSF.

8. Existing utilities (lighting conduits, pipes, mains, overhead lines, underground conduits, etc.) which may affect the work at the Project have been shown on the plans from records. It is however, the Engineer's duty not to warrant or guarantee the accuracy or completeness of this information. It shall be the responsibility of the Contractor to locate and protect all existing facilities which might be affected by this work or his operations.

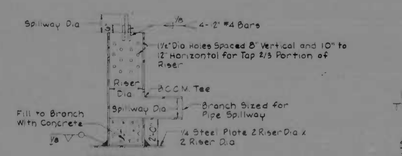
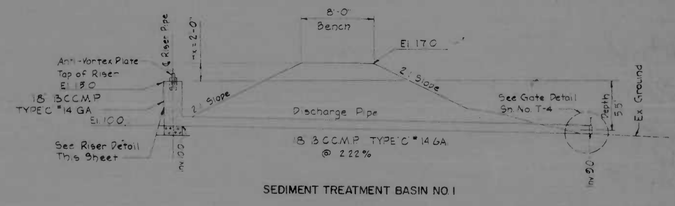
RISER DETAIL
NO SCALE

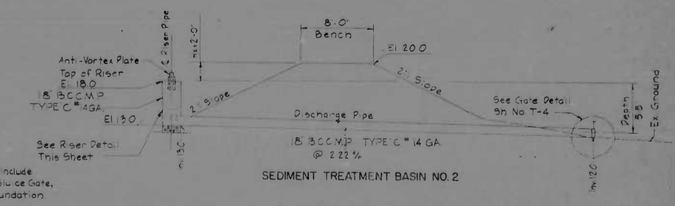


SECTION A-A

NOTE: Price Bid for Pipe Shall Include Pipe, Anti-Vortex Plate, Sluice Gate, Concrete, and Riser Foundation.



SEDIMENT TREATMENT BASIN NO. 1



SEDIMENT TREATMENT BASIN NO. 2

TEMPORARY PIPE & RISER AT SEDIMENT TREATMENT BASINS
NO SCALE

EXPLANATORY NOTES AND REFERENCES

VERTICAL CONTROL
The Location and Elevations of Bench Marks are Shown on The Plans. All Elevations Shown are Based on Baltimore City Datum.

INVERT ELEVATIONS
All Invert Elevations are Approximate and May be Modified to Meet Conditions Encountered During Installation of Underground Facilities.

SIGHT DISTANCE
Stopping Sight Distance For Crest Vertical Curves is Based on a Height of Object = 0.33' and a Height of Eye = 3.0'. Headlight Sight Distance For Sag Vertical Curves is Based on a Height of Headlight = 2.0' and an Upward Divergence of Beam = 1°.

MATERIALS SALVAGED IN CONSTRUCTION
These Materials Shall Become The Property of The Contractor and Shall be Removed From The Site of Construction Except For Those Items Provided For Salvage as shown on the Plans and Special Provisions.

HORIZONTAL CONTROL
The Project is Oriented to Conform With The Baltimore City Grid System.

CLEARING AND GRUBBING
Special Attention is Directed to the Fact that no Clearing and Grubbing or Grading May Commence for this Project Until the Clearing Limits are Staked in the Field and Approved by the Engineer. No Clearing Will be Allowed Beyond Construction Limits. Clearing limits are to be staked in the field by the Contractor.

DRAINAGE STRUCTURES
The Locations And Inverts of The Drainage Structures Are Subject to Modification as May be Required by Field Conditions, as Directed by The Engineer.
