GENERAL NOTES:

1. SPECIFICATIONS: S.R.C. Specifications and Errata to Specifications dated March 1968 and Special Provisions for materials and construction. AASHO Standard Specifications for Highway Bridges dated 1969, and 1970 Interim Specs. for design. For reinforced concrete design, fs 1200 psi except that the concrete in bridge deck slabs supported by steel stringers [illegible]
2. LOADING: HS 20-44 or 2-24,000 lb axles spaced 4' apart whichever governs, with provisions for [illegible] wearing surface.
3. CONCRETE: Class "A" Concrete shall have minimum compressive strength of [illegible] psi in 28 Days. See Special Provision.
4. CHAMFER: All exposed corners of concrete shall be chamfered 3/4"x3/4" [illegible] except where indicated by the following notation on the plan: "No Chamfer."
5. REINFORCING STEEL: Reinforcing steel shall conform to ASTM Designation A 615 [illegible]. All splices shall be lapped a minimum of [illegible] bar diameters unless otherwise noted. [illegible] otherwise noted.
6. STRUCTURAL STEEL: Structural steel shall be ASTM Designation A 36 [illegible] See Special Provisions.
7. [illegible]
8. [illegible]
9. Stay-in-Place steel forms shall be used on this contract.

GENERAL NOTES

1. SPECIFICATIONS: Maryland SRC Specifications and Errata in specifications dated March 1968 and Special Provisions for Materials and Construction. AASHO Standard Specifications for Highway Bridges dated 1969 and 1970 Interim Spec. for design. For reinforced concrete design f'c=1200 psi, except that the concrete in bridge deck slabs supported by steel beams has fc=1050 psi.
2. LOADING: HS 20-44 or 2-24,000 lb axle spaced 4' apart whichever governs, with provisions for future 2" wearing surface.
3. CONCRETE: Class "A" Concrete shall have a minimum compressive strength of 3,000 psi @ 28 Days. See Special Provisions.
4. CHAMFER: All exposed corners of concrete shall be chamfered 3/4" with milled chamfer strips, except where indicated by the following notation on the plans "Do Not Chamfer".
5. REINFORCING STEEL: Reinforcing steel shall conform to ASTM Designation A-615 Grade 40. All splices shall be lapped a minimum of 30 bar diameters unless otherwise noted. Minimum cover for any bar shall be 2" unless otherwise noted.
6. STRUCTURAL STEEL: Structural steel shall be A.S.T.M. Designation A-36. See Special Provisions.
7. FOUNDATIONS: Recommendations are given on Individual foundations.
8. Two coats of pure epoxy coating shall be applied to all abutment seats & the back face of all abutment backwalls.
9. Scupper Floor Steel Forms shall be used in this contract.

Notes:
All concrete and structural components and fracture critical steel to be fabricated and erected in accordance with the latest AASHTO Specifications and the Special Provisions.
All intermediate diaphragms and cross frames shall be placed normal to the girders.
All connections of flanges and webs of main plates shall be placed right against the tension flange and fillet welded in compression flange. All bearing stiffeners shall be milled to bear against tension flange and full penetration groove welded to compression flange. All stiffeners and fillet welds at corners shall be discontinued around corners.
All components shown are nominal dimensions.
All bearing stiffeners shall be placed vertical to the girder web.
Framing details at skewed supports shall be detailed to fit.
Framing details at skewed supports shall be detailed to fit.
Cutting of primary steel members for the passage of utilities will not be permitted.
Welding Details at Bearing, Details of Typical Deck Section, Typical Deck Reinforcement Details, Bearing Details at Abutments and Piers, Details of Joints, Details for Expansion Joint

Note:
Dimensions "A", "B", "C", "D" and "E" are measured from the Girder. The flange plates are to be sloped to meet flange connections as shown in inside girder connection details Sheets S-28 & S-30.

Notes:
1) For θ1 and θ2 See Table of Angles this sheet for curved girders (Spans 5-N thru 7-N). θ1 and θ2 are measured from tangent at ℄ Cross Girder or ℄ Brg. East Abutment.
2) All Intermediate Diaphragms in Span 5-N shall be placed normal to ℄ Constr. I-95 and those in Spans 6-N & 7-N shall be placed parallel to ℄ Pier 6-N.

PLAN

FIX BEARING TYPE F-1500

Location	Sole Plate Thickness at ℄ of Bearing	Masonry Plate Thickness
Pier 7-S Column 1A2	2'-7/16"	1'-9/16"
Pier 8-N Column 1B2	2'-3 5/8"	1'-5/8"

Notes:
All Steel used in bearings shall conform to ASTM Designation A-588 .
All Anchor Bolts, Hex nuts and washers shall be of the same mechanical quality as A.S.T.M. A 325 Steel.
Epoxy Resin shall be applied on fix bearing area between the following:
Plate Surfaces Abutments and Masonry Plate
Plate Surfaces Abutments and Beam Plate
Sole Plate and Bed Plate Steel Plate
Epoxy Resin Bonding Compound shall be used at air temperature in between 50ºF and 70ºF.
Fixed bearing plate washers and nuts shall be non-hardening sealing compound or organic joint sealer.

SEQUENCE OF CONSTRUCTION KANE - DUNDALK VIADUCT

PHASE I

1. Construct all Pier Footings and Columns.
2. Construct all Intermediate Diaphragms.
3. Erect the following Steel Girders:

SOUTHBOUND	NORTHBOUND
CG1-S	CG1-N
CG2-S	CG2-N
CG3-S	CG3-N
CG1-3	

4. These Plate Girders shall be temporarily braced so that there will be no flipping and overturning.
5. Erect the following temporary supports:

SOUTHBOUND	NORTHBOUND
(S1)(1-2)	(N1)(1-2)
(S2)(1-2)	(N2)(1-2)
(S3)(1-2)	(N3)(1-2)
(S4)(1-2)	(N4)(1-2)
(S5)(1-2)	(N5)(1-2)
(S6)(1-2)	(N6)(1-2)
(S7)(1-2)	(N7)(1-2)

6. Erect Corresponding Main Girders of Spans 4A-5 thru 6A-5 and 4A-N thru 7-N consecutively. Erect Main Girders on temporary supports and/or Abutments to proper elevations (Shim on temporary supports as required) make field welds and Prange connections at Cross Girders. Make certain of proper web and flange alignment and plumbness prior to making connections. Erect Main Girders in the following sequential manner:

SOUTHBOUND	NORTHBOUND
(S6)(1-2) (S5)(1-2) (S4)(1-2)	(N6)(1-2) (N5)(1-2) (N4)(1-2)
(S5)(1-2) (S4)(1-2) (S3)(1-2)	(N5)(1-2) (N4)(1-2) (N3)(1-2)
(S4)(1-2) (S3)(1-2) (S2)(1-2)	(N4)(1-2) (N3)(1-2) (N2)(1-2)
(S3)(1-2) (S2)(1-2) (S1)(1-2)	(N3)(1-2) (N2)(1-2) (N1)(1-2)

7. Erect End and Intermediate Diaphragms on each span as the first pair of Main Girders are in place.
8. Remove all temporary supports except (S1)(1-2) (N1)(1-2)

PHASE II

1. Erect the following Plate Girders:

SOUTHBOUND	NORTHBOUND
CG1-S	CG1-N
CG2-S	CG2-N
CG3-S	CG3-N

These Plate Girders shall be temporarily braced so that there will be no flipping and overturning.

2. Erect the following Temporary Supports:

SOUTHBOUND	NORTHBOUND
(S1)(1-2)	(N1)(1-2)
(S2)(1-2)	(N2)(1-2)
(S3)(1-2)	(N3)(1-2)

3. Erect Corresponding Main Girders of Spans 1-S thru 3-S and 1-N thru 4-N consecutively. Erect Main Girders on temporary supports and/or Abutments to proper elevations (Shim on temporary supports as required) make field welds and Prange connections at Cross Girders. Make certain of proper web and flange alignment and plumbness prior to making connections. Erect Main Girders in the following sequential manner:

SOUTHBOUND	NORTHBOUND
(S3)(1-2) (S2)(1-2) (S1)(1-2)	(N3)(1-2) (N2)(1-2) (N1)(1-2)
(S2)(1-2) (S1)(1-2) (S0)(1-2)	(N2)(1-2) (N1)(1-2) (N0)(1-2)
(S1)(1-2) (S0)(1-2) (S-1)(1-2)	(N1)(1-2) (N0)(1-2) (N-1)(1-2)

4. Erect End and Intermediate Diaphragms on each span as the first pair of Main Girders are in place.
5. Remove all temporary supports in preparation for placement of deck concrete.
6. Place deck slab concrete as shown in Deck Slab Pouring Sequence Sheet S-56.

PLAN

SECTION A-A

SECTION B-B

Notes:
1. The cost of Temporary Supports shall be included in the cost of structural steel.
2. Temporary Supports shall be designed, erected and furnished by the Contractor at no additional cost. Temporary Supports are Subject to the Engineer's Approval.
3. It is the Contractor's responsibility to ensure that all falsework and Temporary Supports are adequately protected against the traffic. Temporary barricade locations are shown on plan. Barricade Plans are Subject to the Approval of the Engineer.
4. The Contractor may submit his own Temporary Support Scheme - Subject to the Approval of the Engineer.
5. For Phases I and II Construction, See Special Provisions.

ELEVATION - PARAPET PULL BOX
Scale 1½"=1'-0

Notes:
Minor deviation from box dimensions will be allowed if construction designs so require. But only after approval by the Interstate Division for Baltimore City.
The box cover is to be of aluminum alloy with pebble or shot finish. The face of the cover must be flush with the face of concrete. A ¼" rubber gasket is to be fitted between the cover and box flanges. Drill and tap holes in box flanges and fasten cover to box with ½" dia. stainless steel countersunk Phillips head screws. Bolt use shall be not dipped galvanized after fabrication.
All box dimensions are inside dimensions.
For Roadway lighting see Sheets
For Pull Box locations see Sheets S-1 thru S-36.

GENERAL NOTES

SPECIFICATIONS: Materials, workmanship and construction shall conform to the Standard Specifications for Highways and Bridges, 1974 Edition and all applicable Specifications, Policies and Standards of the American Association of State Highway and Transportation Officials (AASHTO) except as modified by the Standard Specifications for Highways and Bridges, 1978 Edition.

DESIGN SPECIFICATIONS:

CONCRETE: Class A (Structural) concrete shall be machine mixed, air entrained concrete with a minimum compressive strength of 3,000 psi at 28 days. Air entrainment to be between 4.5% and 7.5%. See Concrete Notes.

CLASS B: Unless otherwise shown, all concrete shall be machine mixed, air entrained concrete with a minimum compressive strength of 2,000 psi at 28 days.

REINFORCING STEEL: Reinforcing steel shall conform to ASTM Designation: A-615 Grade 60. All bars shall be bent around a pin of not less than the diameters as shown on the plans unless otherwise noted.

ANCHOR BOLTS: Anchor bolts shall conform to ASTM designation A-325.

MINIMUM SOIL FOUNDATION BEARING PRESSURE 4 TONS PER SQUARE FOOT.

EXISTING UTILITIES: Existing conduits, pipes, ducts, overhead lines, or other obstructions encountered during the progress of the work, not shown on the plans or in the wrong location, shall be brought to the attention of the Engineer. Does not warrant or guarantee the accuracy of such information, nor shall he be responsible for the Contractor's failure to locate and preserve all utilities. Removal or relocation of such utilities shall be performed by the owners of the utilities or as directed by the Engineer.

HORIZONTAL ALIGNMENT: Design of all overhead signs so that the face of panels is normal with angles to centerline of roadway as shown on plans. All angles are to the nearest tenth of a degree. All curves are to the nearest foot.

Notes:
1. For boring made in April 1974 a 2 1/2" diameter drive sampler was driven with a 300 lb. weight falling 30 inches for the initial 6 inches. The sampler was then driven an additional 12 inches and the number of blows recorded. For borings made in March 1978 a 3 1/2" diameter drive sampler was driven with a 140 lb. weight falling 30 inches.

EXPLANATORY NOTES AND REFERENCES

VERTICAL CONTROL
The Location and Elevations of Bench Marks are Shown on The Plans. All Elevations Shown are Based on Baltimore City Datum.

INVERT ELEVATIONS
All Invert Elevations are Approximate and May be Modified to Meet Conditions Encountered During Installation of Underground Facilities.

SIGHT DISTANCE
Stopping Sight Distance For Crest Vertical Curves is Based on a Height of Object = 0.33' and a Height of Eye = 3.0'. Headlight Sight Distance For Sag Vertical Curves is Based on a Height of Headlight = 2.0' and an Upward Divergence of Beam = 1°.

MATERIALS SALVAGED IN CONSTRUCTION
These Materials Shall Become The Property of The Contractor and Shall be Removed From The Site of Construction Except For Those Items Provided For Salvage as shown on the Plans and Special Provisions.

HORIZONTAL CONTROL
The Project is Oriented to Conform With The Baltimore City Grid System.

CLEARING AND GRUBBING
Special Attention is Directed to the Fact that no Clearing and Grubbing or Grading May Commence for this Project Until the Clearing Limits are Staked in the Field and Approved by the Engineer. No Clearing Will be Allowed Beyond Construction Limits. Clearing Limits are to be Staked in the Field by the Contractor.

DRAINAGE STRUCTURES
The Locations And Inverts of The Drainage Structures Are Subject to Modification as May be Required by Field Conditions, as Directed by The Engineer.
