Mrs. Wiggin's Idea of London. During the recent visit of Mrs. Wiggin, the American author, in London, an interviewer called on her. With pencil poised, the interviewer asked: "And what do you think of London,

Mrs. Wiggin?" "You remind me," answered the author cheerfully, "of the young lady who sat beside Dr. Gibbon at dinner. She turned to him after the soup. 'Do, dear Dr. Gibbon,' she said, "tell me about the decline and fall of the Roman empire."

Faults in American Character. In an address on botanical education in America, Prof. W. F. Ganong remarks that "disregard of particulars and a tendency to easy generalities are fundamental faults in American character," and he insists upon the necessity of laboratory and experimental work in all scientific study. Books "ease the wits," but independent observation is the source of sound din knowledge in science.

Of Great Importance in Glassmaking and Warfare-Moving Character of Quicksands Explained.

The sands of the sea are singularly aseful. They are of primary imporance in glassmaking. They have an important place in warfare, as a bank of sand twenty inches thick is proof against modern rifle shots. The electrical properties of sand show that it

has positive electricity, although a rod of silica, the chief constituent of sand is negative.

The singular drying effect which occurs when a stretch of wet sand is pressed by the foot is due entirely to an alteration in the piling of the sand grains. Normally the grains are close together, but abnormal piling is brought about by pressure of the foot, the space between the edges of the grains being enlarged and the water dress suits and wedding gowns. drained away. If the pressure of the foot is continued the sand becomes wetter than ever, the partial vacuum quickly bringing water from the surrounding sand.

In quicksands the moving character is thought to be due to the imprisonment between the grains of gases from organic matter.
