FISHING TIME IN THE PASIG

Swimming in Myriads Near Surface They Are Snared and Speared by Filipinos.

Friday morning Filipinos snaring eels and other fish in the Pasig near front. It was fully ten feet in length.

Both banks of the Pasig and all the ships and lighters moored in the stream were thronged with hundreds of Filipinos with snares and spears trying to catch the fish that in myriads were swimming near the surface of the stream.

Natives when asked in regard to the phenomenon were almost unanimously in their statement to the ef fect that at this time of the year the bottom of the river gets hot and that the fish have to leave the depths of the stream and flash back and forth on or near the surface.

Another theory that seemed to have a great many adherents was to the effect that at this time every year there was a change in the character of the water, this change acting or the fish as a stimulant.

This theory was advanced by an old pilot who has witnessed the phenomenon for many years.—Manila Times.

MAKE THOUGHT VISIBLE.

May Solve Mystery of the Genius and

the Fool. Boston (Special).—It will be possible to watch the processes of thought on the moving-picture screen. By a new apparatus which is being perfected the man of science will be able to suggest an idea to his patient and then observe the infinitesimal changes of the brain tissues which result upon thinking. So Dr. Max, Buff, fellow of psychology at Clark University in Worcester, says. Dr. Buff makes known that a device now in preparation by which the tiny brain cells; may be magnified 5,000 times, will make

thought actually visible to the eve. Light will be thrown on the problem of crime by this new achievement, he believes. A man's mental power may be measured to a nicety. And the mystery of the two great extremes in the mental scale—the brain of the genius and the brain of the fool-will be solved.
