At the request of the General Assembly, the Governor created the Commission on the Future of State Psychiatric Hospitals in October 1986 (Joint Resolution no. 60, Acts of 1986). The Commission is to study the use and role of State psychiatric hospital centers in community-based mental health care. The Commission will make recommendations on budgets, service standards, the scope of patient care, and the number of State psychiatric facilities.

By June 1987, the Commission will report to the Governor and General Assembly.

E. Lander Medlin, *Executive Director*

P.O. Box 460
College Park 20740 Telephone: 454-2400

The Governor appointed this council by Executive Order in 1970 to succeed the Governor's Science Resources Advisory Council.

The Governor's Science Advisory Council provides the Governor with objective scientific or

technological advice as the Governor deems necessary and appropriate. It identifies broad future problems in all fields to which scientific approaches should be applied, formulates recommendations to alleviate these problems, and defines problem areas for which committees could find solutions or recommendations for action. The Council also defines scientific areas needing additional research or data analysis, reviews available resources to perform such analysis, and recommends the approach to be used. The Council further works to improve scientific education and identifies well defined problem areas for graduate studies, particularly those studies that will be of value to the State.

The Council provides scientific and technological advice to the principal Executive Departments at the Governor's request or with the Governor's approval. It also serves as a liaison with scientists of other states or agencies in coordinating approaches to common scientific problems.

GOVERNOR'S TASK FORCE ON SELF-INSURANCE
