

**GINN & COMPANY'S PUBLICATIONS.**

**Robinson's History of Western Europe.**

The excellence of Robinson's "History of Western Europe" has been attested by the immediate and wide spread adoption of the book in the best schools and colleges in the country. It is an epoch-making text-book on the subject in that it *solves in an entirely satisfactory manner the problem of proportion.*

**From the "American Historical Review."**

In the opinion of the writer, this is the best manual of general European history which has yet appeared in English. And the reason for Professor Robinson's comparative success in the impossible task of compressing into seven hundred readable pages a clear account of the chief events and movements of European history, from the barbarian invasions of the fifth century to the formation of the kingdom of Italy and the German Empire, appears to be the consistent application to his task of two principles—omission and emphasis.

PAUL VAN DYKE,

*Professor of History in Princeton University.*

**Brigham's Geographic Influences in  
American History.**

*From James F. Chamberlain, Teacher of Geography, State Normal School, Los Angeles, Cal.* I consider this a very strong book. It will be of very great value to all teachers of history because it shows clearly the vital influence which geographic environment exerts upon the history of a people. It will be very helpful to teachers of geography because it brings out the very core of the subject. The book is written in an interesting manner and should have a wide sale.

**Political Science Quarterly.**

FOUNDED IN 1886.

**Edited by the Faculty of Political Science of Columbia University.**
