

The first of these is the fact that the
 number of cases of disease in the
 United States is not in proportion to
 the population. It is in fact
 much smaller than in other
 countries. This is due to a
 variety of causes, but the
 most important is the fact that
 the climate of the United States
 is generally more healthy than
 that of other countries.

The second of these is the fact that
 the mortality rate in the United
 States is also much smaller than
 in other countries. This is due
 to a variety of causes, but the
 most important is the fact that
 the medical profession in the
 United States is generally more
 advanced than in other countries.

The third of these is the fact that
 the life expectancy in the United
 States is also much longer than
 in other countries. This is due
 to a variety of causes, but the
 most important is the fact that
 the living conditions in the
 United States are generally more
 favorable than in other countries.

The fourth of these is the fact that
 the average income in the United
 States is also much higher than
 in other countries. This is due
 to a variety of causes, but the
 most important is the fact that
 the industrial revolution in the
 United States was more complete
 than in other countries.
