

1 they are far more and they are in terms of, you recall.
2 Some of you who were in this legation can do it more
3 effectively than I, and it is too bad we don't have that
4 decision of the Court of Appeals where there are tables
5 which indicate quite some disparity, and there is also
6 taken into account by the Court of Appeals the view that
7 the picture of the two houses should be taken into account
8 at the present time.

9 Now, one may not think well of this Court of
10 Appeals decision. Actually, I believe it is something
11 around 20 per cent deviation from the normal in a sense.
12 We have one or two more cases far more. The point I am
13 trying to make here instead of allowing some flexibility
14 we allow almost none. We fight preclude coming close. I
15 don't know what the difference is in Harford County. It
16 is a little. We have been able to allow Harford County
17 to have a senator with some disparity. Do you know whether
18 that is within a 5 per cent deviation from the normal.
19 That is what this language means, isn't it? 5 per cent
20 deviation from the normal?

21 DR. BARD: Yes.
