| Total .....  | 12,448 pages |
| Parchments flattened .....   | 2 pages      |

### PHOTOCOPYING

The amount of work accomplished by the Photostat operator at the Hall of Records for the last year is larger by far than in any other year. As the detailed list below will show, a total of 17,453 pages was completed. This compares with 14,860 pages for the preceding year and 10,685 pages for the year before that. Since most of our effort was devoted to County Land Records, our long-term program of replacing the originals in the county seats with photocopies made an extraordinary amount of progress.

During the course of the year Frederick County was added to Somerset and Prince George's among the completed counties. During the previous year we had begun the Charles County series, but we were able to do only two volumes. We have now progressed solidly from the first year of the record, 1658, to 1733; and several later volumes which were in a bad state of repair have also been done.

In the case of Kent County we have completed the Deed series from 1761 to 1790 which is, of course, as late as we shall go. We began at 1761 because some years ago several interested citizens completed typewritten copies of the series from the earliest days of the County through 1760. It is our hope that these typewritten copies will be used in lieu of photocopies which the Hall of Records is required to furnish to the County on demand. The Dorchester County series has hardly been begun, running only from 1669 to 1701.
