### PHOTOCOPYING

Again during the past fiscal year almost the whole effort of the photostat camera operator was directed toward the duplication of those county land records which are deposited at the Hall of Records and which we are required by law to replace with photostats. The attention of the members of the Hall of Records Commission is invited to the fact that in a good year, such as the last one, around 17,000 pages can be photostated with our present equipment. Since Land Record volumes average about 500 pages, it is clear why duplication of the Land Records before 1788 has taken so many years and why the Hall of Records is not willing to commit itself any further. In the following section of this report I have explained our program of microfilming later Land Records. However, I am aware that there is much objection to using microfilms in the counties — there is even some objection to using photostats — and for that reason I have asked in my budget for 1950 sufficient funds for the purchase and installation of a continuous process photostat camera. Cameras of this kind process mechanically and can turn out five or six times as much as manually operated equip-
