

ployment in the several departments, two of whom receive from the Principal the salaries of nine hundred dollars jointly;

That the Academy with regard to pupils has been, during the last semi-academical year, in a very flourishing condition, numbering, as it will be seen by the next tabular statement, an average of over one hundred students;

That an average of ten students have received the full advantages of the Academy without charge, by reason of the fund received from the State, and agreeably to its provisions, and that the aforesaid ten students were entered and placed on the State Fund list, by the special request of their parents or guardians—and that the value of tuition thus gratuitously dispensed would be, on the terms charged to other pupils as prescribed by the Board of Trustees—at least two hundred dollars per annum.

It is proper to add that five other students were received, (on account of the large and valuable assistance rendered by the State,) whose parents are either actually insolvent or probably unable or unwilling to pay—although said pupils were *not* entered by their parents or guardians, with request that they receive the advantages of the State Educational Fund;

That said Academy is divided into three Departments, as follows:

1st. "High English and Classical;" comprising students in Latin, Greek, French, Geometry, Algebra, Book Keeping, and the Natural Sciences.

2d. "Common English," embracing pupils in Reading, Writing, Spelling, Arithmetic, English Grammar and Geography.

3d. "Primary Department," embracing Reading, Writing, Spelling, Primary Geography, and Elementary Arithmetic.

First Quarter ending November 30th, 1855—11 weeks.
