 Maryland State Department of Health

The prime function of a Health Careers Council would be to form an aggressive coordinated year-round program for meeting future needs for health professionals in Maryland.

It is planned that the Health Careers Council would conduct such services as follows:

Information Programs to acquaint students in 7th through 12th grades with the health careers, and recruit them for these professions.

Counselor Conferences to orient school guidance counselors on health careers.

Informational Presentations about health careers at PTA meetings, county, and state fairs, service clubs and other similar gatherings to inform the parents and larger public of opportunities offered in health careers.

Continuing and Expanding Publicity on Careers throughout the State by using public service features of mass media vehicles—such as feature articles in newspapers, spot announcements on radio and television.

Maintenance of Current Information to answer inquiries about: (1) schools having educational programs in health careers; (2) openings for applicants to these schools in or near Maryland; (3) scholarships, student loan funds, and other financial aids to prospective students; and (4) curriculum requirements for admission to health career educational and training programs.

Information Service to Teachers, Librarians, and Counselors of Maryland schools on the availability of health career educational recruitment aids for incorporation in lesson plans, school libraries, and distribution to students.

Organizing a State-wide Speakers' Bureau and list of local professional resource "contact" people available to school personnel and students.

Promote and Assist in the Development of Health Career Clubs and youth work-experience programs in hospitals and other health agencies.

Promote the Establishment of Scholarship Aid and Student Loan Funds.

Assist in the Coordination of Planning and Programming to meet future personnel needs of health service institutions and agencies in Maryland. Provide schools and health service organizations with periodic statements of present and forecast needs for professional people.
