

Section 12-2021. VEGETATIVE EROSION AND SEDIMENT CONTROL MEASURES.

Vegetative erosion and sediment control measures shall include, but not limited to, the following:

(1) Areas in which grading or cutting and filling operations are carried out in several stages and which anticipate exposure of soil for six (6) months or more shall be temporarily stabilized by seeding with fast growing annuals such as rye, rye grass, and sudan grass. Temporary Seeding—Erosion control coverage shall be provided in the following order:

- (a) Necessary erosion control practices
- (b) Seedbed preparation
- (c) Lime and fertilizer as required
- (d) Seeding
- (e) Mulching and mulch anchoring as required

(2) Erosion control with mulch shall be provided in the following order:

- (a) Necessary erosion control practices for six (6) months or less.
- (b) Mulching placed on a friable soil.
- (c) Mulch anchoring as required.

(3) Protection of soil from erosion after final grading where permanent seeding is delayed shall be provided in the following order:

- (a) Installation of required erosion control practices.
- (b) Application of required lime and fertilizer.
- (c) Preparation of final seedbed.
- (d) Mulching as required.
- (e) Mulching anchoring as required.

(f) Permanent seeding shall be established during first season following mulching.

(4) Permanent vegetative stabilization shall be provided in the following order:

- (a) Installation of required erosion control practices.
- (b) Application of required lime and fertilizer.
- (c) Preparation of adequate seedbed.
- (d) Seed or Sod.
- (e) Application of mulch and anchor for seed and anchor for sod.
