

determine the populations presently served, the cost effectiveness of the program, the program's impact upon the health of the population served, and their interrelationships to one another;

4. Assess the feasibility of gathering additional data and developing information systems to define what the actual food needs of the population are and to determine to what extent food needs are being met; in conjunction with this exercise determine whether surveys or the maintenance of an ongoing nutritional monitoring system which incorporates existing data banks would be useful;

5. Assist in the collection of the data needs identified above and utilize existing resources to establish information systems;

6. Identify the need for additional financial or human resources to meet identifiable food needs and recommend to the Governor, the State Legislature and other appropriate organizations, the levels and types of resources required; and be it further
