Raley Prods Council For Report on Slots

LEXINGTON PARK, Md., July 6 (Special)—State Sen. J. Frank Raley Jr. today prodded the Legislative Council to complete its two-year study of means of easing the cenomic pain expected to accompany the death of legalized gambling.

The St. Marys County Democrat said that the Council was "committed" to issue a report to Gov. J. Millard Tawes, especially since slot machine interests have been pushing for an extension of the two-year moratorium before the law takes effect next year.

St. Marys is one of the four counties in which slots are legal. The others are Charles, Calvert and Anne Arundel. All four depend heavily on tax revenue from the machines.

Last year's law passed by the General Assembly calls for a three-year phasing out of all slots beginning next summer.

The tone of Sen. Raley's letter to the Council indicated his displeasure with the Council's slowness in producing what he called "a serious study of this entire problem." Members of the Council visited the four counties last year and interviewed local officials on the subject.

"It is my understanding that Gov. Tawes is anxiously awaiting the economic report from the Council before taking action and has requested the report on a number of occasions," Sen. Raley wrote.

"With this background," Raley added, not in pledges by the Council in 1963 to make the study, "it is incumbent upon the political leaders to make preparation now to alleviate economic problems" that the outlawing of slot machines will create.

"I cannot stress too strongly the economic impact of my county," Raley said, adding, "I am sure you will agree that the State has some obligation since the State allowed these machines to be legalized and develop into an integral part of the economy."
