A report of the directors was read, which exhibited the finances of the company in a prosperous state. A report from Mr. Brunel, the engineer, was then presented, in which he stated the cause of the late disaster and the prospect as to the recommence-ment of the work. The cause of the accident was said to have been mainly the penurious manner in which the superintendants had supplied funds for carrying on the works. It was declar ed that the leakage had been entirely stopped, and that the work would be resumed in a few days—as soon as the clay and other substance which had been sunk to close the aperture should have settled and become firm.
