thuse, aware of his condition, of the approach of those, ware of his condition of the approach of death. He preserved the singular power and brilliancy of his intellect to a very late hour. The evening before his death his physician informed him, with a laudable frankness, of his approaching departure; and was gratified to find the awful communication received without surprise and without disappointment. He spoke of his life as a protracted illness; and expressed a conviction that it was well that the scene of suffering should close. He rethe scene or squering should close. He re-garded the past without reproach, and the fu-ture without apprehension. Until his mind was closed by the shade of the tomb, he pre-sented the same intellectual elevation of cha-

By foreign hands his dying eyes were closed, By foreign hands his decent limbs composed, By foreign hands his humble grave adorned, By strangers honoured, and by strangers mourned.

He died at the age of sixty-one years. Forty years of this term were passed in active public life. No man has for so long a period engrossed so large a share of public attention; and but few have exercised so extended and yound general anticipation. On Saturday last, to suffer the pains of death.

Nature had gifted him with a peculiar and dangerous power. His sarcasin blighted every thing it touched; and left the object of his wight a scathed and blasted monument of the power of genius. That he at times misused this power, is not surprising. Most men gifted with the prerogative to wield the thunder of Jove, would give mothing but thunder?

MARI. We have heard much said of late in favou of marl, but we had not till the other day an opportunity of witnessing its effects ourselves. We frankly confess we were most agreeably surprised in walking over some of the farms in Salem county last week and noticing the influence of this valuable article on winter grain as well as grass. A person might be conducted into a field blindfolded and he would be able easily to distinguish from the difference in the size of wheat, rye, grass, &c. exactly where it has been used and where not. We witnessed about one hundred hands at work in the pits near Woodstown digging and throwing it out, to be conveyed to the surrounding larms.—Bridgeton Whig.
