the feelings with which we gaze upon it, and prodisposes us to sentiments of respect and you hold, in making your way to it. It was twingert, just after a magnificent subset,—one to which many topped Olympus' on the shore opposite to us was inhebited for a brief moment of giory—that it came shodenly in sig it with no little effect, at the distance.

This is the season of reflection—as often we saw it, stretcome in a dark mass, relieved by nameuanoered minarets of snowy waite, from toe water's edge far up the acclivities of a hill sweeping round the bay.

It was near ten o'clock before we came to anchor, a mile or move from the city. The moon, though an dour above the horizon, and not afford suffice at light to disclose much of the scene around; out while waiting for a visit from the American Consul, this morning, we had abundant time to examine it before going on snore.

Ine head of the bay presents a beautiful curvature, eight or ten miles in its sweep, from the low points of which on the North and South on either side, the land rises gradually to the Bastwaro, till, benind the town in the centre it re-ches an elevation of some hundred feet. The surface is every where naked, parched, and sunburnt, except a attetch of a mile or two in-mediately along the water, on each side of the bay, where the

other object, in the general landscape, re-freshing from its vendure, is the summit of s mount in in the south-east clothed slightly

With a different style of building and more cheerful colours, the city would be more imposing in its exhibitions from the anchorage. It extends a mile and more along the water side, and rises gradually in a triangular form of blighted expectations, of resolutions made up the hill in one dense mass of tiled roofs, and broken, of the cvil done, and the good an universing thank red or Spanish brown, by the waite embatted walls which front it on the same, kirted along the milts, a round tower ing of so great a number of magnificen sups | est point-by the domes of its mosques and oulo bear him company; and all has care quarters, externingled with the dark cypress, is slowly but certainly advancing to the Captain Bullan, for the no more desiredes for fage of the wide spreading oriental plane for the present, to axial onserves of the full - this for from using without attraction and

mind, that I can scarce consist the conviction that in this respect we are the dupes of cred-nitty, and that the victors of Lochiess which we have associated with Greece, at legal the goster, and the present and the presen which we have associated with Greeke, at least one of the globe, and died to whom he was personally known, built for the section of the globe, and died to whom he was presently known, built on the is section of the globe, and died to whom he was greatly beloved, most of the section of the globe, and died to whom he was greatly beloved, most of the section of the globe, and died to whom he was greatly beloved, most of the section of the globe, and the section is a variety of clevations and cavernous designation of the globe.

1 continued above the clouds for nearly an hour and during that time saw the earth on-

As I feil below the ciouds, I was surprised to see a beautiful river, full of noats a dives-The city of Science lies at the head of a bity which jute restward with a considerable angle with the general direction of the Guit, and is conceased from view till within some the feelings with which we gaze upon it, and the feelings with which with a considerable and is conceased from view till within some the feelings with which we gaze upon it, and the feelings with which we gaze upon it, and the feelings with which we gaze upon it, and the feelings with which we gaze upon it, and the feelings with which we gaze upon it, and the feelings with which we gaze upon it, and the feelings with which we gaze upon it, and the feelings with which we gaze upon it, and the feelings with which we gaze upon it, and the feelings with which we gaze upon it, and the feelings with which we gaze upon it, and the feelings with which we gaze upon it, and the feelings with which we gaze upon it, and the feelings with which with the feelings with the suppose that I could have travelled so far as to have reached the banks of the Delaware, New Castle, and that the beautiful city of Wilmington lay in signt, to the north of my

Attempting to descend here, to avoid crossn; the river, I encountered the eastern current, with which I had started at Lancaster, and was carred by it across the State of Delaware. I, at 5 P. M. precisely, touched the earth, near Cooch's Mills, 3 inles from Elk-

As I passed over a house near this place. As I passed over a mose who are you,'
I replied by asking where am I,' which they
answered go back where you came from.' I soon after, let go my anchor, hear to the turnpike, and foctunately it laid hold of a fence, when I called to two black men to come to my assistance, which they at first declined, without giving me any answer in words. After repeated solicitations, they were induced to approach, and drawing down the balloon, brought me to the ground.

Soon afterwards, I was joined by a party on horseback from Elkton, who taking hold of the anchor-rope, as I sat in the car, car ried me, sailing through the air, along h turnpike, to Elkton, a distance of S miles,

I luxuriant and well watered soil. The only poportunity to take note of time by its pas- peren, had finished the folding and securing

As we passed along the turnpike, the intervention of trees sometimes, made the road too narrow for the passage of the balloon, which was then, by lengthening the cable, elevated

above them, and brought over their tops. Tot- morning I went to Frenchtown, and by rail road and steamboat reached Philadel-phia at 5 P. M.

It is not easy to tell the exact distance traversed during the two hours and six minutes passed in the air, but it is probable, that it was not less than one hundred miles.

in descending, I adopted a simple plan of estimating the force and direction of the current beneath me. A feather of suffici nt size to be visible a distance loaded in such a m. nballoon and its current, until it enters another atmospheric movement, when it is seen to take the new direction. The gromauc may thus be guided to a conce of current before he enters it. In ascending, the same kind of knowledge may be had by letting off very small balloons, prepared for the purpose, and carried up in the car.

thanks to the line nus at Lancaster, who gave me countenance and assistance, and to the good people of Eikton, who did every thing power to promote my comfort and convenience.

The prexedtable will show the various altitudes, and their corresponding tempera-ture. I should have noted the time of enter-I was so completely absorbed by the beauty and variety of the phenomena, that I entire-In larger to make at that time, the necessa-

SINGULAR OPERATION.

Abou his month's ago a woman swallowed a bone was a stuck in her windspipe, and in consequence of the effects which it produced size was sent to the indicinary at Europe 21, where the operation describes below was per-formed by Mr Liston. The symptoms were, that inspiration was noisy and striculous, particularly during respiration. There was which they are no niles, that far, and the contrast in the far in the second states of the me, has made at the contrast in the the strategy we have yet a near in the Accordance and forms of moure are so far inferior, in roman e and is submitted to the transfer of the strategy and transfer of the submitted of the worth, which is a strategy and the s neurty. The passing of the instrument pro-ures violent his of coughing, with heavy g of the chest, and livinity of the face. The removal of the bone gave instantaneous reand easy, and the string of inspiration cease, en entirely. The cure was completed to less than a fortnigat, and the woman her lamily, in perfect health .- English and

THE DATE PALM IN GEORGIA.

There is at present in our New Room 8 great currosity, being no less than a branch reat curiosity, being in Georgia, which is roin a Date tree, raised in Georgia, which is coustered with the golden fruit. leated for it to John Couren, Esq. of St. strons, who is distributed for his zeal in endeavouring to naturalize exotic fruits in this climate. A glance at its stock would suffice to show its kin to the Palmetto, they both belonging to the natural order Palmez. In the specimen before us, the fruit of a

four role eight at the extrements of shorters of shour roleight at the extremities of shorter steems, about a foot and a call long, which radiate from the very extreme of the branch of The stem is free of fruit for full the tree a foot: it, like the truit, is of a golden color-1 e whose number of dates on this branch a-mounted to about 200. The fourt is not yet ripe. Inside it is firm and flishy, with a sub acid, but not oisagreeable taste.

acid, but not obsagreeable taste.

The Palmetto flourishes in great vigour on our sea coast, and we see no reason way the Date-Palm could not be naturalized in the same climate. Mr. Cuper has, we understand, upwards of finy Date trees on his pliniarion, where he has also succeeded in railing a large number of Olive trees.

Those results are highly flattering to his perseverance and industry, and should encorage other gettlement possecute the same
