I continued above the clouds for nearly an hour and during that time saw the earth onty three times, and then but for a moment, as the rolling clouds beneath happened to break their well preserved continuity.

As I fell below the clouds, I was surprised to see a beautiful river, full of boats a divessels, and to find myself amost immediately over a small town, on its margin, while I saw another of greater size, at a little distance mat it was not either the Susque habita or t e Chesapeake, but it never entered my nead to suppose that I could have travelled so far as to have reached the banks of the Delaware, Tautle, and that the beautiful city of Wilmington lay in sight, to the north of my

Attempting to descend here, to avoid cross ing the river, Lencountered the eastern curand was carred by it across the State of Bela ware. I, at 5 P. M. precisely, touched the earth, near Cooch's Mills, 3 miles from Elk-

As I passed over a house near this place. As I passed over a made me, who are you,' I replied by asking where am I,' which they answered "go back where you came from.' I soon after, let go my anchor, near to the turnpike, and toctunately it laid hold of a fence, when I called to two black men to come to my assistance, which they at first declined, without giving me any answer in words. After repeated solicitations, they were induced to approach, and drawing down the balloon, brongist me to the ground.

Soon afterwards, I was joined by a party

on horseback from Elkton, who taking hold of the anchor-rope, as I sat in the car, car ried me, sailing through the air, along h

luxuriant and well watered soil. The only i opportunity to take note of time by its pas- | seven, had finished the folding and securing the balloon, car. &c.

As we passed along the turnpike, the intervention of trees semitimes, made the road too narrow for the passage of the balloon, which was then, by lengthening the cable, elevated

above them, and brought over their tops.
This migring I went to Frenchtown, and by rail road and steamboat reached Philadel-

It is not easy to tell the exact distance traversed during the two hours and six minutes

passed in the air, out it is probable, that it was not less than one hundred miles.

In descending, I adopted a simple plan of estimating the force and direction of the cur-

thanks to the friends at Lancaster, who gave me countenance and assistance, and to the in their power to promote my comfort and

The nnexed table will show the various altitudes, and their corresponding tempera-ture. I should nave noted the time of entering the ci wis, and their exact elevation, but I was so completely absorbed by the beauty and variety of the phenomena, that I entirely lorger to make at that time, the necessa-

THE DATE PALM IN GEORGIA.

There is at present in our New. Room a great curiosity, being no less than a branch from a Date tree, raised to Georgia, which is deuted for it to John Couren, Esq. of St. desired for it to John Courses, usq. of St. Simons, who is distinguished for his zeal in endeavouring to naturalize exotic fruits in this climate. A glance at its stock would suffice to show its kin to the Palmetto, they onth belonging to the natural order Paime.
In the specimen before us, the fruit of a

rich golden color is pen a t.in clusters if four to eight at the axi emittes of slinder stems, about a foot and a calf long, which radiate from the very extreme of the branch of the tree. The stem is free of fruit for full a foot: it, like the tout, is of a golden color-I e whole number of dates on this branch arounted to about 200. The fourt is not yet ripe. Inside it is firm and fleshy, with a sub acid, but not disagreeable taste.

The Palmetto dourishes in great vigour on

our sea coast, and we see no reason way the Date-Palm could not be naturalized in the same climate. Mr. C uper has, we undersame climate. Mr. Coper has, we under-stand, upwards of fifty Date trees on his plantation, where he has also succeeded in rating a large number of Ohve trees. These results are highly flattering to his
