the course of the discussions which took e in the Convention, all the difficulties ch have been encountered, and which yet be apprehended, in the prosecution he silk culture, as a great branch of A-ican industry, were fully considered; and result was an universal conviction that, in the words of the resolution, Silk be grown in the United States, not onor domestic purposes, but as a valuable cle of commercial export. The suitahealth of the worm, and the trees which ply its food; the capabilities, the habits, the genius of our people for conducting business through its whole process, and price of American labour as compared h that of silk-producing countries, all ame satisfied. The fact is, that our un-trained freedom in the entertainment and cussion of various and discordant doe us, as to our English ancestry, an omni-ous appetite for knowledge, and a capacito learn in a few years what cannot be acroutine of thought and of action! Thu it happened in manufactures as in other nes; American ingenuity, uurestrained by judice or law, has triumphed over difficuls apparently insurmountable! How long,

With a monthly jourto concentrate and offuse every ray of ating light on the subject, it was the opion of the Convention that we may realize all enjoy, in our own day, the boon which
