

# The Maryland Gazette.

ANNAPOLIS, THURSDAY, OCTOBER 10, 1839.

No. 41.

PROSPECTUS  
Publishing in the City of Baltimore a  
Daily and Tri-Weekly Paper to be call-  
ed the  
TIMORE POST AND COM-  
MERCIAL TRANSCRIPT.

Post and Transcript will be devoted to  
Literature, Commerce, Agriculture, Arts,  
Literature and News.

OLITICS.—The Post and Transcript will be  
a and undeviating advocate of the doctrine of  
a free government, which constitutes the funda-  
mental principle of our social and political system. An  
education imparts on the great question of Na-  
tional Policy, the paper will be of the "strict com-  
mission" school, maintaining that the action of Gov-  
ment should be limited to the exercise of those  
which are specifically enumerated in the Consti-  
tution. It will consequently oppose the measures of  
those who by a loose interpretation of this word  
of our liberties, seek the establishment of  
an arbitrary of the principles upon which the  
of our government is reared, and which, un-  
derstand to confusion and anarchy from which no  
can be found but in despotism.

ing these schemes, regarded as of obviously da-  
tendency, is that of a National Bank, which, whether  
or harmless or useful it might be in the full  
and unanimity of the republic, would, in a  
of danger,—its branches penetrating every part  
country, and in the words of Jefferson, "having  
and in its phalanx,"—have power to inter-  
ferious and alarming obstacles to the operations of  
Government.

assumption of the right to impose a tariff be-  
the duties necessary to supply the constitutional  
of government; the appropriation of the public  
upon schemes of internal improvement, and the  
of Government with the domestic institu-  
of the States, particularly with the institution of  
will be equally opposed as encroachments upon  
constitution and upon the rights of States.  
liability of the Banks to periodical convulsions,  
their inability to comply, at all times, with the  
as upon which they are employed by the Treasury,  
inced by the suspensions of 1837, render the mea-  
of dispensing with their agency in conducting the  
operations of Government one of obvious sense.

The Post and Transcript will therefore advocate  
adoption of the Independent Treasury System, as a  
calculated to relieve government from the con-  
straints to which its connection with Banks renders  
it—one which will insure stability and uniformity  
of fiscal action, and reduce the potent influence  
of a free action, or a league of deposit Banks, to  
the power of appointing the few officers necessary to  
run the system. But while the Treasury System  
be supported as a judicious fiscal measure, Bank  
institutions will not be opposed. On the contrary  
interests—with such checks as are calculated to  
re the object of their creation, will be supported as  
calculated to the prosperity and advancement of the  
country.

such is the outline of the doctrines for the advocacy  
which the new paper is to be commenced, and to the  
ness and vindication of which the Editor pledges  
best support. They are the doctrines of the present  
institutions; and as their continuance and efficiency  
and much upon the energy and zeal of those to  
the important office of carrying them into effect  
entrusted, the paper will zealously advocate the  
of MARTIN VAN BUREN to the Presidency  
as one who has proved himself eminently qualified  
to uphold and defend them and insure their unmar-  
red action. It is believed the Post and Transcript  
not be found an unworthy coadjutor of the demo-  
cratic paper already engaged in the cause in this city.  
On the subject of State politics the paper will  
take a judicious course, consonant with the spirit and  
principles of our republican institutions. Aware of  
great caution and deliberation with which this sub-  
ject should be approached, it will nevertheless fear-  
lessly advocate such changes as our own experience has  
evinced to be necessary, or such as the history of  
other States in the confederacy has taught to be wis-  
e and salutary.

The all important subject of Internal Improvement  
will be earnestly pressed upon the public attention; the  
at necessity of a vigorous prosecution and early  
completion of the great works in which the State is al-  
ready so deeply interested, will be urged as positively  
secure to preserve unimpaired the public faith and  
ensure the true and permanent prosperity of our City  
and State.

II. COMMERCE.—The commercial department of  
the paper will be attended to with the utmost care and  
effort will be spared to render the information re-  
specting foreign, domestic and local markets, and the  
general state of trade, full and satisfactory.

III. AGRICULTURE.—This important subject  
will receive more attention than has usually been paid  
to it in similar publications; and besides detailing facts  
of importance to the farmer and planter, it is intended  
to discuss the principles of agricultural economy and  
claim for the husbandman that station as a citizen  
and an important producing agent, to which his in-  
dependence and labors entitle him.

IV. THE ARTS, both fine and mechanical, will have  
their appropriate department, and such discussion will  
be entered into as will tend to evolve the true prin-  
ciples upon which both are founded and to foster the ef-  
forts of native genius and skill rather than of foreign  
agency.

V. LITERATURE AND NEWS.—The Post and  
Transcript will aim at nourishing a sound and pure li-  
terary taste; and at the same time will endeavor to  
give the best of its contemporaries in judicious selec-  
tions and in the promptitude, accuracy and extent of  
its general intelligence, foreign and domestic.

The first number will be issued in the course of the  
present month, after which it will be regularly contin-  
ued. It is desirable that the names of subscribers be  
returned as speedily as possible to the Publisher.

TERMS.—The Post and Transcript will be of the  
largest class of newspapers—the DAILY at \$3, and the  
Tri-Weekly at \$5 per annum, payable in advance, un-  
less otherwise directed in the city.

All letters must be addressed to S. P. SKINNER,  
Editor Post and Transcript, Baltimore, Md.  
Those containing remittances may be forwarded  
at the expense of the publisher; all others, must be paid  
by the subscriber.

PRINTING  
Neatly executed at this  
OFFICE.

Printed and Published by  
JONAS GREEN,  
At the Brick Building on the Public  
Circle.

Price—Three Dollars per annum.  
Doctor W. EVANS' SOOTHING SYRUP,  
FOR CHILDREN TEETH-  
ING.

Prepared by himself.  
TO MOTHERS AND NURSES.  
The passage of the Teeth through the gums produces  
troublesome and dangerous symptoms. It is known by  
that there is great irritation in the mouth and  
gums during this process. The gums swell, the secre-  
tion of saliva is increased, the child is seized with  
frequent and sudden fits of crying, watchings, starting  
with screams, and spasms of peculiar parts of the  
system, and thrusts its fingers into its  
mouth. If these precursive symptoms are not speedily  
allayed, spasmodic convulsions universally supervene,  
and soon cause the dissolution of the infant. If  
mothers who have their little babes afflicted with these  
distressing symptoms, would apply Dr. William Evans'  
Celebrated Soothing Syrup, which has preserved hun-  
dreds of infants when thought past recovery, from being  
suddenly attacked with that fatal malady, convulsions.

A REAL BLESSING TO MOTHERS.  
Dr. W. Evans' Celebrated Soothing Syrup,  
for Children Cutting their Teeth.  
This infallible remedy has preserved hundreds of  
children, when thought past recovery, from convul-  
sions. As soon as the Syrup is rubbed on the gums,  
the child will recover. This preparation is so innocuous,  
so efficacious, and so pleasant, that no child will  
refuse to let its gums be rubbed with it. When infants  
are at the age of four months, though there is no ap-  
pearance of teeth, one bottle of the Syrup should be  
used on the gums, to open the pores. Parents should  
use it without the Syrup in the nursery where there  
are young children; for if a child wakes in the night  
with pain in the gums, the Syrup immediately gives  
ease by opening the pores and healing the gums; there-  
by preventing Convulsions, Fevers, &c.

From Positive of the Efficacy of  
Dr. Evans' Soothing Syrup.  
To the Agent of Dr. Evans' Soothing Syrup, Dear  
Sir—The great benefit afforded to my suffering infant  
by your Soothing Syrup, in a case of protracted and  
painful dentition, must convince every feeling parent  
of the essential early application of such an inva-  
luable medicine to relieve infant misery and torture. My  
child, while teething, experienced such acute suffer-  
ing, that it was attacked with convulsions, and my wife  
and I, I am glad to inform you, the child has completely  
recovered and no recurrence of that awful complaint  
has since occurred, the teeth are emanating daily and  
the child enjoys perfect health. I give you my cheerful  
permission to make this acknowledgment public, and  
will gladly give any information on this circumstance.  
WM. JOHNSON.

A gentleman who has made trial of Dr. Evans'  
Soothing Syrup in his infant, in a case of a tooth,  
has been tried to state that he found it entirely ef-  
fectual in relieving pain in the gums, and preventing  
the consequences which sometimes follow. We cheer-  
fully comply with his request.—N. York Sea.  
I believe it is generally acknowledged by those  
who have used it, that the Soothing Syrup for Children  
Cutting Teeth, advertised in another column, is a highly  
valuable article for the purpose for which it is intended.  
Highly respectable persons, at any rate, who have made  
use of it, do not hesitate to give it the sanction  
of their names and addresses.

A SEVERE CASE OF TEETH-  
ING, WITH SUMMER COMPLAINT,  
cured by the infallible American Soothing Syrup  
of Dr. W. Evans. Mrs. McPherson, residing at No. 8,  
Madison street, called a few days since, at the medical  
office of Dr. W. Evans, 100 Chatham street, N. Y.,  
and purchased a bottle of the Syrup for her child, who  
was suffering excruciating pain during the process of  
teething, being momentarily threatened with convul-  
sions, its bowels too were exceedingly loose, and no  
food could be retained on the stomach. Almost imme-  
diately on its application, the alarming symptoms  
entirely ceased, and by continuing the use of the Syrup  
on the gums, the bowels in a short time became quite  
natural. As a tribute of gratitude for the benefit af-  
forded the child, the mother came of her own accord,  
and freely sanctioned publicly to the above. Pray be  
particular in applying at 100 Chatham street, as there  
has several counterfeit articles. No other place in  
the city has the genuine for sale.

IMPORTANT TO MOTHERS.—Children  
generally suffer much uneasiness from cutting their  
teeth. Whatever dangerous or fatal symptoms arise,  
the process of nature, they are produced invariably from  
the highly irritated and inflamed condition of the parts  
—therefore the principal indications of cure are to abate  
the inflammation, and to soften, soothe, and relax the  
gums. If that is effected, the infant is preserved from  
severe fever, inflammation, spasmodic cough,  
trifling of tenderness, pain, fever, and convulsions,  
displaying their fatal consequences. If mothers, nur-  
ses, or guardians have their babes tortured with painful  
and protracted dentition, and this notice attracts their  
attention, they should not be deterred from purchasing a  
bottle of EVANS' SOOTHING SYRUP for Child-  
ren Teething, the incomparable virtue of which in  
completely relieving the most distressing cases (when  
applied to the infant's gums as directed) is invaluable.  
The remedy has restored thousands of children when  
on the verge of the grave, to the embraces again of their  
distracted parents, attended with that awful and morti-  
fying malady—Convulsions.

DIRECTIONS.  
Please shake the bottle when first opened.  
When children begin to be in pain with their teeth  
cutting in their gums, put a little of the Syrup in a  
tea-spoon, and with the finger let the child's gums be  
rubbed for two or three minutes, three times a day. It  
must not be put to the breast immediately for the milk  
would take the Syrup off too soon. When the teeth are  
just coming through their gums, mothers should imme-  
diately apply the Syrup; it will prevent the children hav-  
ing a fever, and undergoing that painful operation of  
teething, which always makes the next tooth  
much harder to come thro' and sometimes causes death.  
Sold at Dr. W. Evans' Office, 100 Chatham street,  
New York; and by all his Agents throughout the Union.

Agent,  
JEREMIAH HUGHES,  
Annapolis, Md.

HIGHLY IMPORTANT.  
Nervous diseases, liver complaint, dyspepsia, bilious  
diseases, piles, rheumatism, consumption, coughs, colds,  
spitting of blood, pain in the chest and side, ulcers, fol-  
lowing weakness, all delicate and mercurial diseases are

successfully treated at Dr. EVANS' Medical Office,  
100 Chatham street, New York.

Dr. EVANS' CAMOMILE AND  
APERIENT PILLS.  
ON LOW SPIRITS.

Low spirits is a certain state of the mind, accompa-  
nied by indignation, wherein the greatest evils are ap-  
prehended upon the slightest grounds, and the worst  
consequences imagined. Ancient medical writers sup-  
posed this disease to be confined to those particular re-  
gions of the abdomen technically called hypochondria,  
which are situated on the right or left side of that cav-  
ity, whence comes the name hypochondriasis.  
Symptoms. The common corporeal symptoms are,  
flatulency in the stomach or bowels, acid eructations,  
costiveness, spasmodic pains and often an utter inabil-  
ity of fixing the attention upon any subject of impor-  
tance or engaging in any thing that demands vigour  
or courage. Also languidness—the mind becomes ir-  
ritable, thoughtful, desponding, melancholy and de-  
jected, accompanied by a total derangement of the nervous  
system. The mental feelings and peculiar train of  
ideas that haunt the imagination and overwhelm the  
judgment, exhibit an infinite diversity. The wisest and  
best of men are as open to this affliction as the weak-  
est.

Causes. A sedentary life of any kind, especially  
severe study, protracted to a late hour in the night,  
and rarely relieved by social intercourse or exercise, a dis-  
olute habit, great excess in eating and drinking, im-  
moderate use of mercury, violent purgatives, the sup-  
pression of some habitual discharge, (as the obstruction  
of the menses) or long continued eruption; relaxation  
or debility of one or more important organs within the  
abdomen is a frequent cause.

Treatment. The principal objects of treatment are,  
to remove indigestion, strengthen the body, and enliven  
the spirits, which may be promoted by exercise, early  
hours, regular meals, pleasant conversation—the bow-  
els (if costive) should be carefully regulated by the oc-  
casional use of a mild aperient. We know nothing  
better adapted to obtain this end, than Dr. Wm. Evans'  
Aperient Pills—being mild and certain in their opera-  
tion. The bowels being once cleansed, his inestimable  
Camomile Pills, (which are tonic, anodyne, and anti-  
spasmodic) are an infallible remedy, and without dis-  
pute have proved a great blessing to the numerous pub-  
lic.

Some physicians have recommended a free use of  
mercury, but it should not be resorted to; in many ca-  
ses it greatly aggravates the symptoms.

Agent,  
JEREMIAH HUGHES,  
Annapolis, Md.

THE BARON VON HUTCHELER  
HERB PILLS.

These Pills are composed of Herbs, which exert a  
specific action upon the heart, give an impulse or  
strength to the arterial system, the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from the blood, there is a consequent in-  
crease of every secretion, and the blood is quickened  
and equalized in its circulation through all the vessels,  
whether of the skin, the parts situated internally, or  
the extremities; and as all the secretions of the body  
are drawn from
