MARYLAND

Regions and Political Subdivisions

The services and facilities of the Maryland State Department of Health and Mental Hygiene (DHMH) are operated on a non-discriminatory basis. This policy prohibits discrimination on the basis of race, color, sex, or national origin and applies to the provisions of employment and granting of advantages, privileges and accommodations.

The Department, in compliance with the Americans With Disabilities Act, ensures that qualified individuals with disabilities are given an opportunity to participate in and benefit from DHMH services, programs, benefits and employment opportunities.

72.	Selected Mortality Data by Race for Maryland and the United States, 1986-1995.....	145

DEFINITIONS AND EXPLANATORY NOTES

The birth and death data contained in this report are presented on a county of residence basis, regardless of where the vital event occurred, unless specifically noted otherwise. Information on marriages and divorces is limited only to events occurring in Maryland.

DEFINITIONS

Age-adjustment: A methodology used to compare rates among populations with differing age distributions. The direct method of age-adjustment was used to calculate the rates in this report. In this way, the crude death rate for each age group is multiplied by the proportion of the standard population within that age group; the sum of the products is the age-adjusted rate. Age-adjusted rates in this report are standardized to the 1940 U.S. population and are expressed as rates per 100,000 population. Age-adjusted rates should not be compared to crude rates or to adjusted rates calculated using a different standard population.

Birth rate: Number of live births per 1,000 population.

Death rate: Number of deaths from all causes per 1,000 or per 100,000 population. Death rates for specific causes are per 100,000 population.

Fetal death*: Death before the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such separation, the fetus does not breathe or show any evidence of life, such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles.

Fetal mortality rate: Number of reportable fetal deaths per 1,000 total births. Total births include live births plus fetal deaths of twenty or more weeks gestation.

Infant death: Death occurring to a person under one year of age.

Infant mortality rate: Number of infant deaths per 1,000 live births.

Length of pregnancy: A measure of the duration of gestation in completed weeks, as calculated from the first day of the last normal menstrual period to the date of birth.

Live birth*: The complete expulsion extraction from its mother of a product of human conception, irrespective of the period of gestation, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscle, whether or not the umbilical cord has been cut or the placenta is attached.

Life expectancy: The average number of years of life remaining for an individual of a particular age group.

Low birth weight: A live birth weighing under 2,500 grams (5 1/2 pounds).

Maternal mortality rate: Number of maternal deaths per 100,000 live births.

Mortality rate: See death rate.

Neonatal death: Death occurring to a person under 28 days of age.

Neonatal mortality rate: Number of neonatal deaths per 1,000 live births.

Perinatal death: Death occurring after twenty weeks of gestation but before 28 days after birth. The perinatal deaths included in this report are, therefore, the sum of the reportable fetal deaths (fetal deaths after 20 weeks gestation) and the neonatal deaths.

Perinatal mortality rate: Number of perinatal deaths per 1,000 total births. Total births include live births plus fetal deaths of twenty weeks gestation or more.

Postneonatal death: Death occurring to a person between the 28 days and one year of age.

Postneonatal mortality rate: Number of postneonatal deaths per 1,000 live births.

EXPLANATORY NOTES

METHODOLOGY USED IN POPULATION ESTIMATES

The subdivision estimates for July 1, 1996 in this report were prepared by the U.S. Bureau of the Census, Federal-State Cooperative Program for Population Estimates, using the tax return method. This is a component method that uses federal tax data to measure the net intercounty migration of the household population under 65 years of age, reported resident birth and death statistics to estimate net natural change and data on Medicare enrollees to estimate the population 65 years old and over. Tax data are used in the base year and the estimate year to determine the number of persons whose county of residence changed during the period. A net migration rate based on exemptions claimed by the matched cases is applied to the household population under 65 years of age. These estimates of migration are then combined with the independent estimates of the population 65 years old and over, inmates of institutions, college students in dormitories, military personnel living in barracks, and the other components of population change (births, deaths, immigration from abroad, and net movement between the military and civilian population) to yield an overall estimate of the total population.

The population 5-17 years of age is estimated based on migration rates calculated from school enrollment data (by age, race and grade) supplied by the Maryland State Department of Education and applied to the "expected" population 5-17 years of age on July 1 of the estimate year. The

"expected" population consists of 1990 census survivors from the date of the census to the estimate date. Race breakdowns are based upon projections of change since the 1990 Census.

The population under five years of age is estimated by race on the basis of adjusted net migration rates for the school age population applied to the "expected" population under five years of age on July 1, 1996. The "expected" population consists of 1990 census survivors and survivors of births occurring between the date of the census and the estimate date (including corrections for "migration exposure").

The population 65 years of age and over is estimated based on data on Medicare enrollments by race and sex supplied by the Social Security Administration, U.S. Department of Health and Human Services. The changes in the Medicare enrollments for each age-race-sex group for the estimate year are applied to the population estimates of the previous year.

The ages 18-64 years residual population (obtained by subtracting the under 18 and over 65 year age groups from the county estimate) is broken down using projections for race and age. Gender is determined using ratios from the 1990 Census. All components are finally controlled to be consistent with the State age population as prepared by the Bureau of the Census.

Because portions of the population were prepared using different methodologies than those used in previous years, comparisons between 1996 and earlier years should be made with caution. The best comparisons are those between 1996 and the decennial census years.

CAUSE OF DEATH

The ninth revision of the International Classification of Diseases was first used in 1979 for coding the Underlying Cause of Death. The eighth revision had been in use from 1969 to 1978. Because of coding changes in certain categories of causes of death, comparison between current data and data earlier than 1979 should only be made with reference to coding changes. The National Center for Health Statistics has published comparability ratios for mortality data. This publication is entitled "Estimates of Selected Comparability Ratios Based on Dual Coding of 1976 Death Certificates by the Eighth and Ninth Revisions of the International Classification of Diseases" Monthly Vital Statistics Report, DHEW Publication No. (PHS)80-1120, Vol. 28, No. 11, February 1980.

*The definitions of live birth and fetal death are set by law in Section 14 (a) of Article 43 of the Maryland Code, 1957 Edition - Supplement. However, fetal deaths are reportable for filing purposes only if the death occurs after a period of gestation of twenty or more completed weeks (Section 21 (a) or Article 43 supra). Therefore, the fetal deaths included in this report cover only those of twenty or more weeks of gestation.

***VITAL
STATISTICS
HIGHLIGHTS***

Highlights of 1995

Population

- ! The estimated **population** of Maryland in 1995 was 5,042,440, an increase of 1% from the year before. There were 3,505,750 white and 1,336,560 African Americans residing in the state.

Life expectancy

- ! The **life expectancy** for an infant born in 1995 was 75.2 years. For whites this figure was 77.1 years and for African Americans, 69.3 years.

Births

- ! There were 72,312 **births** in 1995, 2% fewer than in 1994. The number of births fell by 1% among whites and by 6% among African Americans.
- ! The **birth rate** fell by 3% between 1994 and 1995 to a rate of 14.3 per 1,000 population. The rate declined by 1% among whites and by 7% among other races. Both the number of births and birth rates have been declining in Maryland since 1990.
- ! Ten percent of all births were to **teen mothers** and 4% were to mothers under the age of 18.
- ! Twelve percent of births were to women who had completed fewer than 12 **years of education**.
- ! **Fourth and higher order births** accounted for 9% of all births.
- ! In terms of **area of occurrence**, 89% of all births to Maryland residents occurred within the state. Approximately 9% occurred in the District of Columbia and 2% in other states.
- ! Thirty-three percent of all births were to **unmarried women**. For whites this figure was 20% and for African Americans, 64%. The percentage of births to unmarried women has

risen by 15% in the past decade with the largest increase occurring among white women.

- ! Eighty-eight percent of all women began **prenatal care** during the first trimester of pregnancy. Three percent of births were to women who received late (third trimester) or no prenatal care. Among white women this figure was 2%, and among African Americans, 6%. The percentage of women with late or no prenatal care has declined by 29% since 1986.
 - ! The incidence of **low birth weight** was 8% in 1995. This figure was 6% for white infants and 14% for African American infants. The incidence of very low birth weight was 2% overall, 1% for whites and 3% for African Americans. The percentages of low birth weight and very low birth weight infants have been increasing over the past decade.
 - ! Nearly 10% of infants with known **gestational age** were delivered prior to the completion of 37 weeks of gestation. This figure was 8% for whites and 14% for African Americans.
 - ! Three percent of all births were twin or higher order births in 1995. The percentage of **multiple births** has increased by 33% in the past 10 years.
 - ! Twenty-two percent of infants were delivered by **cesarean section** during 1995, a slight decline from the rate in 1994.
- ## Fetal and infant deaths
- ! The **fetal death rate** in 1995 was 8.5 per 1,000 total deliveries. For whites this figure was 6.6 and for African Americans, 12.9.
 - ! The **infant mortality rate** was 8.7 per 1000 live births in 1995, a decline of 1% from 1994. The rate was 6.0 for whites and 15.3 for African Americans.

- ! The **neonatal mortality rate** was 6.0 per 1000 live births for all infants, identical to the rate in 1994. The rate was 3.9 for whites and 10.8 for African Americans.
- ! The **postneonatal mortality rate** was 2.8 per 1000 live births for all races, 2.1 for whites and 4.5 for African Americans.

Deaths

- ! There were 41,681 **deaths** among Maryland residents in 1995 compared with 40,939 in the year before.
- ! The **age-adjusted mortality rate** was 529.6 per 100,000 population, a slight decline from the 1994 rate of 530.6.
- ! **Heart disease** was the leading cause of death in 1995. The age-adjusted mortality rate was 132.4 per 100,000 population, 4% lower than the rate in 1994 and 31% lower than the rate a decade ago. Rates were highest among African American males, with a rate of 228.8 in per 100,000 population in 1995.
- ! The second leading cause of death in 1995 was **malignant neoplasms**, responsible for 24% of all deaths. The overall age-adjusted mortality rate for malignant neoplasms was 138.9 per 100,000 population in 1995, 1% lower than the rate in 1994. The age-adjusted mortality rate was highest for African American males who had a rate of 245.0 per 100,000 population.
- ! **Cerebrovascular disease** was the third leading cause of death in 1995 with an age-adjusted mortality rate of 27.0 per 100,000 population. Despite a 17% decline in the age-adjusted death rate in the past decade, the rates have been increasing in Maryland over the last several years.
- ! **Chronic obstructive pulmonary diseases** were the fourth leading cause of death in 1995. The age-adjusted mortality rate was 18.6 per 100,000 population, a decline of 6% from the year before.

- ! **Accidents and adverse effects** were the fifth leading cause of death in 1995 with an age-adjusted mortality rate of 23.3 per 100,000 population. **Motor vehicle accidents** were responsible for nearly half of all accidental deaths. Falls accounted for the largest number of non-vehicular accidental deaths.
- ! **Pneumonia/influenza** was the sixth leading cause of death in 1995. The age-adjusted mortality rate was 13.1 per 100,000 population, a 13% increase over the rate in 1994. The largest increases in rates between the two years occurred among males of other races (41%) and females of other races (22%).
- ! The seventh leading cause of death in 1995 was **diabetes**, with an age-adjusted mortality rate of 17.5 per 100,000 population. Although the rate in 1995 was similar the 1994 rate of 17.4, there has been a 62% increase in the age-adjusted mortality rate for diabetes in the last decade.
- ! **Human immunodeficiency virus** was the eighth leading cause of death in 1995, down from the seventh leading cause in 1994. The overall age-adjusted mortality rate was 22.8 per 100,000 population, a 4% increase over the 1994 rate and the smallest annual increase to date for Maryland HIV mortality rates. Although African American males had the highest age-adjusted mortality rate (111.4 per 100,000 population in 1995), the greatest increase in rates between 1994 and 1995 occurred among white females. The rate for this group rose from 1.4 in 1994 to 2.0 in 1995, an increase of 43%. HIV was the leading cause of death among persons between the ages of 25 and 44.
- ! There were 639 **homicides** among Maryland residents in 1995 for an age-adjusted mortality rate of 14.1 per 100,000 population. African American males had the highest age-adjusted mortality rate (68.6 in 1995), a figure 14 times the rate among white males. The age-adjusted mortality rate for homicide increased by 57% in the past decade, and was the leading cause of death among Maryland residents ages 15-24 years and the third leading cause of death among

children 5-14 years of age.

- ! The age-adjusted mortality rate for **septicemia** were 7.0 per 100,000 population in 1995. Rates are more than twice as high among African Americans as among whites.
- ! There were 507 **suicides** among Maryland residents in 1995 for an overall age-adjusted mortality rate of 9.3 per 100,000 population. The rate was highest among white males (17.9 per 100,000 population) and lowest among African American females (1.7 per 100,000 population). Suicide was the third leading cause of death among adolescents and young adults ages 15-24.
- ! **Alzheimer's Disease** is now included among the 15 leading causes of death in Maryland. The age-adjusted rate in 1995 was 2.8 per 100,000 population. Rates were higher among whites than among African Americans.
- ! There were nine **maternal deaths** in 1995,

compared with eleven in 1994.

- ! In terms of **place of occurrence**, 94% of all deaths among Maryland residents occurred within the state. Of those deaths occurring out of state, 62% took place in the District of Columbia.

Marriages

- ! There were 43,291 **marriages** in Maryland in 1995. Thirty-five percent of both brides and grooms were previously married. Sixty-seven grooms and 472 brides were under the age of 18.

Divorces

- ! There were 17,454 **divorces and annulments** in 1995. The majority of persons divorcing had been married between four and nine years, and approximately 49% reported having children under the age of 18.

CHARTS

POPULATION

Distribution of the Population by Race, Maryland, 1940-1995.

Distribution of the Population by Age, Maryland, 1940-1995.

LIFE EXPECTANCY

Average Length of Life by Race and Sex, Maryland, 1995.

Average Length of Life by Race and Sex, Maryland and the United States, 1995.

BIRTH RATES

Birth Rate by Race, Maryland, 1985-1995.

Rate per 1000 population

Age-Adjusted Death Rate for Septicemia by Race and Sex, Maryland, 1995.

Rate per 100,000 population

	1986	1987	1988	1989	1990	1991	1992	1993	1994	1995
Maryland	8.3	8.4	8.4	8	7	7.1	7	7	6.8	7
United States	4.3	4.5	4.6	4.2	4.1	4.1	4	4.1	4	4.1

SUICIDE

Age-Adjusted Death Rate for Suicide by Race and Sex, Maryland, Selected Years, 1986 to 1995.

Rate per 100,000 population

	1986	1988	1990	1991	1992	1993	1994	1995
White male	20.8	20.4	17.6	15.8	14.8	16.3	17.5	17.9
All other male	12.2	13.2	9.6	11	12	15.4	13.9	11.9
White female	4.7	4	4.1	2.7	4.3	4.7	3.3	3.1
All other female	3.2	2.8	2	1.1	1.3	2.7	2.4	1.7

Age-Adjusted Death Rate for Suicide, Maryland and the U.S., 1986-1995.

Rate per 100,000 population

	1986	1987	1988	1989	1990	1991	1992	1993	1994	1995
Maryland	11.3	10.8	10.7	10.1	9.3	8.2	8.7	9.9	9.6	9.3
United States	11.9	11.7	11.5	11.3	11.5	11.4	11.1	11.2	11.2	11

Age-Adjusted Death Rate for Suicide by Race and Sex, Maryland, 1995.

Rate per 100,000 population

MARRIAGES

Number of First Marriages by Age of the Bride and Groom, Maryland, 1995.

Percent Distribution of Marriages by Previous Marital Status of the Bride and Groom, Maryland, 1995.

DIVORCES

Number of Divorces and Annulments by Duration of Marriage, Maryland, 1995.

Number of Divorces and Annulments by Total Number of Marriages, Maryland, 1995.

POPULATION

TABLE 1. ESTIMATED MARYLAND POPULATION BY RACE, REGION AND POLITICAL SUBDIVISION, JULY 1, 1995, WITH COMPARABLE 1990 CENSUS FIGURES.

Region and Political Subdivision	Estimated Population, July 1, 1995							Census (April 1, 1990)
	All races	White		All other races				
		Number	Percent	Total		African American		
		Number	Percent	Number	Percent	Number	Percent

TABLE 10. SELECTED NATALITY CHARACTERISTICS BY MATERNAL RACE, MARYLAND, 1995.

Characteristic	All races	White	<i>All other races</i>			
			Total	African American	American Indian	Asian
Number of births	72,312	45,162	27,150	22,426	158	2,480
<u>Maternal characteristics</u>						
Percentage of births to mothers <18 years of age	4.4	2.4	7.8	9.0	6.3	0.6
Percentage of births to mothers <20 years of age	10.3	6.7	16.2	18.4	13.9	2.0
Percentage of births to women with <12 years education*	12.0	9.9	16.0	16.4	18.9	4.0
Percentage of births to unmarried women	33.4	19.5	56.5	63.8	33.5	9.5
Percentage of 4th and higher order births	8.9	7.7	10.8	11.6	14.6	4.6
Percentage of births to women with prior liveborn loss	1.9	1.5	2.6	2.8	1.9	1.5
<u>Pregnancy characteristics</u>						
Percentage of births to women with prenatal care beginning in the first trimester*	88.0	92.7	79.2	77.7	84.3	80.1
Percentage of births to women with late or no prenatal care*	3.0	1.6	5.7	6.3	3.9	2.1
Percentage of plural births	3.0	3.2	2.8	2.8	0.0	2.8
Percentage of deliveries by cesarean section	22.1	21.7	22.8	23.5	22.2	19.5
<u>Birth outcomes</u>						
Percentage of low birth weight infants (<2500 grams)	8.5	6.2	12.4	13.5	4.4	7.9
Percentage of very low birth weight infants (<1500 grams)	1.8	1.1	3.0	3.3	0.6	1.3
Percentage of births with gestational age <37 weeks*	9.8	7.8	13.1	14.2	8.4	8.0
Percentage of births with 5 minute Apgar score <7	1.3	0.9	2.0	2.2	0.6	0.9
Infant mortality rate**	8.7	6.0	13.2	15.3	6.3	5.6
Neonatal mortality rate**	6.0	3.9	9.3	10.8	6.3	4.0
Postneonatal mortality rate**	2.8	2.1	3.9	4.5	0.0	1.6

*Percentages exclude births for which information pertaining to this variable is unknown.

**Per 1,000 live births.
